

waste disposal facility in Andrews, Texas.

The SEIS analysis will include a review of available environmental data and information; comparative analyses of potential environmental and human health and safety impacts of DUO_x disposal at the three alternative locations (including updated information for the two offsite disposal locations previously identified and studied in the 2004 EISs); analyses of the potential environmental impacts of transporting DUO_x by rail or truck to each alternative site; and an evaluation of the No Action alternative.

Identification of Environmental Issues

The SEIS will examine potential public health and safety effects and environmental impacts from the proposed action. This notice is intended to inform agencies and the public of DOE's proposal. Although the following is not intended to be all inclusive or to imply any predetermination of impacts, these general categories of impacts will be considered in the SEIS: Land use; geology, soils, and geologic hazards, including seismicity; water resources (surface water and groundwater); biological resources; protected, threatened and endangered species, including species of special concern; human health and safety (both routine operations and potential accidents); air quality; noise; cultural and historic resources; waste management; environmental justice; and socioeconomics.

Public Participation in the SEIS Process

A public scoping process is optional for DOE Supplemental EISs (10 CFR 1021.311(f)), and there will be none for this project. However, DOE will provide opportunities for public review and comment, including public hearings, on the draft SEIS.

SEIS Preparation and Schedule

DOE expects to issue the draft SEIS in 2016.

Issued at Washington, DC, on August 19, 2016.
