Abstract: We have entered into a cooperative agreement with Cornell University to study the role of local stakeholder engagement and social data integration in Landscape Conservation Design (LCD) planning and

implementation processes. Promoting ecosystem-level conservation based on LCD will rely on engaging local stakeholders, i.e., local community members and locally based interest groups potentially impacted by conservation actions, in conservation design, planning, and implementation

processes. To date, no systematic assessment of local stakeholders' role in LCD has been conducted. Lacking such assessment, questions remain as to what, when, and where social data (related to stakeholders' values, interests, and knowledge) and public engagement (the direct participation of

stakeholders in information sharing and decision making) are most valuable in LCD processes. Information gathered in this study will provide essential, non-duplicative data and insights for ongoing and future LCD efforts. In addition to literature review and participant observation, this study will employ a multiple case study approach focused on three LCD efforts. We will conduct semi-structured interviews of 90 non-Federal LCD partners and local stakeholders to ascertain how LCD efforts have attempted to integrate social information, how these efforts have worked, and how they might be improved under varying social-ecological conditions.
