

boat electrofishing. Some fish would be anesthetized, sampled for length and weight, allowed to recover from the anesthesia, and released. Most salmonids would be allowed to swim away after being electroshocked, or they would be netted and released immediately. The ODFW does not intend to kill any of the fish being captured, but a small number may die as an unintended result of the activities.

Permit 20535

The U.S. Army Corps of Engineers (USACE) is seeking a three-year research permit to annually take juvenile PS Chinook salmon and PS steelhead in the lower Duwamish River (Washington). The USACE research may also cause them to take adult S eulachon, for which there are currently no ESA take prohibitions. The purpose of the USACE study is to collect starry flounder (*Platichthys stellatus*) and shiner surfperch (*Cymatogaster aggregate*) for tissue sampling and PCB congener analysis. The research would benefit the listed species by enhancing the understanding of contaminant partitioning within the food web near the Lower Duwamish Waterway Superfund Site. The USACE proposes to capture fish using beach seines. All listed fish are released would be captured, handled, and released. The researchers do not propose to kill any listed fish being captured, but a small number may die as an unintended result of the activities.

Permit 20659

The FWS is seeking a five-year research permit to annually take juvenile PS Chinook salmon and PS steelhead from Lake Washington and its tributaries (King County, Washington state). The purposes of the FWS study are (1) to test how attracted Chinook salmon are to different types of artificial lighting, and (2) to examine juvenile Chinook salmon abundance and diets at the mouths of two non-natal tributaries in the City of Seattle. The research would benefit the listed species by (1) providing better information to land resource managers on how best to reduce the effects of nighttime artificial lighting on juvenile Chinook salmon while maintaining appropriate lighting for safety considerations and (2) understanding how juvenile Chinook salmon use urban streams during base flow conditions and after rain events. The FWS proposes to capture fish using beach seines. All PS steelhead and the majority of the PS Chinook salmon would be immediately released after capture. A subset of the juvenile PS Chinook would be anesthetized with

MS-222, measured for length, undergo gastric lavage (non-natal stream surveys only), and released after they have recovered. The researchers do not propose to kill any listed fish being captured, but a small number may die as an unintended result of the activities.

This notice is provided pursuant to section 10(c) of the ESA. NMFS will evaluate the applications, associated documents, and comments submitted to determine whether the applications meet the requirements of section 10(a) of the ESA and Federal regulations. The final permit decisions will not be made until after the end of the 30-day comment period. NMFS will publish notice of its final action in the **Federal Register**.
