SUPPLEMENTARY INFORMATION: This is a summary of the *Incentive Auction Stage 4 Clearing Target Public Notice*, GN Docket No. 12-268, AU Docket No. 14-252, WT Docket No. 12-269, DA 16-1354, released December 9, 2016. 1. The Incentive Auction Task Force (Task Force) and the Wireless Telecommunications Bureau (Bureau) announce the 84 megahertz spectrum clearing target that has been set by the Auction System's optimization procedure for Stage 4 of the incentive auction, as well as the band plan associated with the 84 megahertz spectrum clearing target, which includes seven Category 1 generic license blocks with zero impairments for each of the 416 Partial Economic Areas (PEAs). The Task Force and Bureau also provide details and specific dates regarding bidding and the continuing availability of educational materials, and remind reverse and forward auction applicants of their continuing obligations.

I. Stage 4 Clearing Target and Band Plan

2. The Auction System's clearing target determination procedure has set a spectrum clearing target of 84 megahertz for Stage 4 of the incentive auction. Under the band plan associated with this spectrum clearing target, 70 megahertz, or seven paired blocks, of licensed spectrum will be offered in the forward auction on a nationwide basis.

3. The generic license blocks offered in Stage 4 of the forward auction under this band plan will consist of a total of 2,912 Category 1 blocks (zero percent impaired). There will be no Category 2 blocks offered under this band plan. In other words, seven 100% unimpaired blocks in all 416 PEAs for a total of 2,912 Category 1 blocks will be offered in Stage 4.

4. The clearing target for Stage 4 was determined by applying the procedure the Commission adopted in the *Auction 1000 Bidding Procedures Public Notice*, 80 FR 61917, October 14, 2015, using the same objectives as in the initial clearing target optimization and taking into account the additional channels in the TV band and any participating stations that have dropped out of the auction in the previous stage. Based on the new provisional television channel assignment plan, the nationwide impaired weighted-pops were calculated on a 2x2 cell level and the one-block-equivalent nationwide standard for impairments was applied.
