

fungus pathogenic to adult insects) to help control *Aedes* species of mosquitoes, vectors of the zika virus. Deployment is in a container "trap" designed to attract the egg-laying adult mosquito, and was initially targeted for Puerto Rico, where the zika virus was being locally transmitted. While in the trap depositing eggs, the adult mosquito is coated with the pesticide mixture, and then visits other egg-laying sites, distributing pyriproxyfen in the process. The pyriproxyfen kills the larva by preventing development into an adult, while the *Beauveria bassiana* slowly kills the adult mosquito over 8–10 days. Use is allowed in other areas of the U.S. if zika-transmitting mosquitoes are detected. May 6, 2016 to May 6, 2017.

TSCA Reporting and Recordkeeping Requirements; Standards for Small Manufacturers and Processors

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: On June 22, 2016, President Obama signed into law the Frank R. Lautenberg Chemical Safety for the 21st Century Act which amended the Toxic Substance Control Act (TSCA). TSCA, as amended, requires EPA to review the size standards for small manufacturers and processors, which are currently used in connection with reporting regulations under TSCA Section 8(a). In particular, EPA must make a determination whether a revision of those standards is warranted. EPA's preliminary determination is that revisions to currently codified size standards for TSCA Section 8(a) are indeed warranted. As part of the ongoing review process, the EPA is requesting public comment on whether a revision of the current size standard definitions is warranted at this time.
