On December 20, 2016, Salt Lake City Corporation filed a notice of intent to

construct a qualifying conduit hydropower facility, pursuant to section 30 of the Federal Power Act (FPA), as amended by section 4 of the Hydropower Regulatory Efficiency Act of 2013 (HREA). The proposed 10th East 500 South PRV Station Hydropower Project would have an installed capacity of 225 kilowatts (kW) and would be located on Salt Lake City Corporation's existing 36-inch-diameter water distribution pipe, in a new pressure reducing valve (PRV) station. The project would be located in Salt Lake City, in Salt Lake County, Utah.

**Authority:** 44 U.S.C. 3507(a)(1)(D).

**Title:** FERC–725A(1B), (Mandatory Reliability Standards for the Bulk Power System).

**OMB Control No.:** TBD.

**Type of Request:** Three-year extension of FERC–725A(1B) information

collection requirement with no changes to the reporting requirements.

*Abstract:* Under section 215 of the Federal Power Act (FPA),<sup>1</sup> the Commission proposes to approve Reliability Standards TOP–010–1 (Real-time Reliability Monitoring and Analysis Capabilities) and IRO–018–1 (Reliability Coordinator Real-time Reliability Monitoring and Analysis Capabilities), submitted by North American Electric Corporation (NERC). In this order, the Reliability Standards build on monitoring, real-time assessments and support effective situational awareness. The Reliability Standards accomplish this by requiring applicable entities to: (1) Provide notification to operators of real-time monitoring alarm failures; (2) provide operators with indications of the quality of information being provided by their monitoring and analysis capabilities; and (3) address deficiencies in the quality of information being provided by their monitoring and analysis capabilities.

FERC–725A(1B) address situational awareness objectives by providing for operator awareness when key alarming tools are not performing as intended. These collections will improve real-time situational awareness capabilities and enhance reliable operations by requiring reliability coordinators, transmission operators, and balancing authorities to provide operators with an improved awareness of system conditions analysis capabilities, including alarm availability, so that operators may take appropriate steps to ensure reliability. These functions include planning, operations, data sharing, monitoring, and analysis.

*Type of Respondents:* Balancing Authority (BA), Transmission Operations (TOP) and Reliability Coordinators (RC).

*Estimate of Annual Burden*<sup>2</sup>: The Commission estimates the annual public reporting burden for the information collection as:
