Aluminum Extrusions From China Determinations

On the basis of the record¹ developed in the subject five-year reviews, the United States International Trade Commission ("Commission") determines, pursuant to the Tariff Act of 1930 ("the Act"), that revocation of the countervailing and antidumping duty orders on aluminum extrusions from China would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.

¹ The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

² The Commission also finds that imports subject to Commerce's affirmative critical circumstances determination are not likely to undermine seriously the remedial effect of the countervailing and antidumping duty orders on stainless steel sheet and strip from China.

Overview of This Information Collection

1. *Type of Information Collection:*

Extension of a currently approved collection.

2. *The Title of the Form/Collection:* 2016 Firearm Inquiry Statistics Program: Annual Survey of Background Checks for Firearm Transfers and Permits.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* There is no agency form number at this time. The applicable component within the Department of Justice is the Bureau of Justice Statistics, in the Office of Justice Programs.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Through the Firearm Inquiry Statistics (FIST) Program, the Bureau of Justice Statistics (BJS) obtains information from state and local checking agencies responsible for maintaining records on the number of background checks for firearm transfers

or permits that were issued, processed, tracked, or conducted during the calendar year. Specifically, state and local checking agencies are asked to provide information on the number of applications and denials for firearm transfers received or tracked by the agency, and reasons why an application was denied. BJS combines these data with the Federal Bureau of Investigation's (FBI) National Instant Criminal Background Check System transaction data to produce comprehensive national statistics on firearm application and denial activities resulting from the Brady Handgun Violence Prevention Act of 1993 (the Brady Act) and similar state laws governing background checks and firearm transfers. BJS also collects information from the Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF) on FBI denials screened and referred to ATF field offices for investigation and possible prosecution. BJS began the FIST program in 1995 and collects FIST data annually. BJS publishes FIST data on the BJS Web site in statistical tables and uses the information to respond to inquiries from Congress, federal, state, and local government officials, researchers, students, the media, and other members of the general public interested in criminal justice statistics.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* An estimated 1,044 checking agencies will take part in the 2016 FIST survey, including the 34 state agency reporters that provide complete statewide counts of applications of firearm transfers or permits and denials, a full census of local checking agencies in 9 states where the local agencies are the FIST points-of-contact, and a sample of agencies in 3 states where local checking agencies are responsible for conducting background checks. Based on testing of the current survey form and BJS's extensive history conducting the FIST collection, BJS estimates that the burden will vary depending on the number of permit or transfer types the respondent agency conducts background checks: 20 minutes for agencies that conduct background checks for 1 type; 30 minutes for agencies that conduct background checks for 2 types; and 30 minutes for state reporting agencies. The overall estimated burden is 25 minutes per respondent, which is consistent with the burden associated with the 3 most recent collections (2012, 2014, and 2015).

6. *An estimate of the total public burden (in hours) associated with the*

collection: The estimated public burden associated with this collection is 435 hours annually. (This estimate assumes a 100% response rate). It is estimated that respondents will take 25 minutes to complete a questionnaire. The burden hours for collecting respondent data sum to 435 hours (1,044 respondents × 25 minutes = 435 hours).
