BILLING CODE 4710-05-P

TENNESSEE VALLEY AUTHORITY

Bull Run Fossil Plant Landfill

AGENCY: Tennessee Valley Authority.

ACTION: Record of Decision.

SUMMARY: This notice is provided in accordance with the Council on Environmental Quality’s regulations and Tennessee Valley Authority’s (TVA) procedures for implementing the National Environmental Policy Act (NEPA). TVA has decided to adopt the Preferred Alternative identified in the Bull Run Fossil Plant Landfill Final Environmental Impact Statement (EIS). The notice of availability (NOA) of the *Final EIS for the Bull Run Landfill* was published in the **Federal Register** on January 20, 2017. This alternative, Construct and Operate a Landfill for Storage of coal combustion residual (CCR) on TVA Property Adjacent to Bull Run Fossil Plant (Site J), would achieve the purpose and need of the project to provide long-term disposal of dry CCR materials produced at the Bull Run Fossil Plant.

FOR FURTHER INFORMATION CONTACT:

Anita E. Masters, Project Environmental Planning, NEPA Project Manager, Tennessee Valley Authority, 1101 Market Street, BR 4A, Chattanooga, Tennessee 37402; telephone (423) 751-8697, or by email aemasters@tva.gov. The Final EIS, this Record of Decision and other project documents are available on TVA’s Web site <https://www.tva.gov/nepa>.

SUPPLEMENTARY INFORMATION: TVA is a federal agency and instrumentality of the United States created by and existing pursuant to the TVA Act of 1933. Its broad mission is to foster the social and economic welfare of the people of the Tennessee Valley region and to promote the proper use and conservation of the region’s natural resources. One component of this mission is the generation, transmission, and sale of reliable and affordable electric energy.

TVA operates the nation’s largest public power system, producing

approximately four percent of all of the electricity in the nation. TVA provides electricity to most of Tennessee and parts of Virginia, North Carolina, Georgia, Alabama, Mississippi, and Kentucky. Currently, it serves more than nine million people in 80,000 square miles (mi) in this seven-state region. The TVA Act requires the TVA power system to be self-supporting and operated on a nonprofit basis and directs TVA to sell electricity at rates as low as are feasible. TVA receives no taxpayer funding, deriving virtually all of its revenues from sales of electricity. In addition to operating and investing its revenues in its power system, the TVA Act provides for flood control, navigation and land management for the Tennessee River watershed and assists local power companies and state and local governments with economic development and job creation.

The Bull Run Fossil Plant generates over six billion kilowatt-hours of electric power in a typical year, which is enough electrical energy to meet the needs of approximately 430,000 homes. Historically, TVA has managed storage of CCR materials at the plant in ash impoundments or dry landfills. To modernize the facility and comply with TVA’s commitment to manage CCRs on a dry basis, TVA completed the construction of a mechanical dewatering facility in 2014, which removes free water from the CCR—both bottom ash and gypsum. The CCR is then dry-stacked in an on-site landfill located east of the plant. TVA had already been handling and storing fly ash on a dry basis, so there were no changes to that process as a result of the change to dry storage of CCR.

The Bull Run Fossil Plant has state-of-the-art air pollution controls and is one of the coal plants that TVA plans to continue operating in the future. TVA needs 20 years of disposal capacity to meet this operational timeline. Based on current estimates of energy production and consumption rates, on-site storage capacity will be expended within 10 years.

The purpose of this action is to support the need for additional capacity for the long-term management of CCR at Bull Run Fossil Plant. Additional storage capacity would also enable TVA to continue operations at Bull Run Fossil Plant as planned and would be consistent with TVA’s voluntary commitment to convert wet CCR management systems to dry systems.
