

Rules and Regulations

Federal Register

Vol. 82, No. 116

Monday, June 19, 2017

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. FAA-2017-0240; Special Conditions No. 25-691-SC]

Special Conditions: Gulfstream Aerospace Corporation GVII-G500; Airbag Systems on Multiple-Place and Single-Place Side-Facing Seats

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for the Gulfstream Aerospace Corporation (Gulfstream) GVII-G500 airplane. This airplane will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for transport-category airplanes. This design feature is airbag systems on multiple-place and single-place side-facing seats. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: This action is effective on Gulfstream on June 19, 2017. We must receive your comments by August 3, 2017.

ADDRESSES: Send comments identified by docket number FAA-2017-0240 using any of the following methods:

- *Federal eRegulations Portal:* Go to <http://www.regulations.gov> and follow the online instructions for sending your comments electronically.
- *Mail:* Send comments to Docket Operations, M-30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE., Room W12-140, West

Building Ground Floor, Washington, DC 20590-0001.

- *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

- *Fax:* Fax comments to Docket Operations at 202-493-2251.

Privacy: The FAA will post all comments it receives, without change, to <http://www.regulations.gov>, including any personal information the commenter provides. Using the search function of the docket Web site, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477-19478), as well as at <http://DocketsInfo.dot.gov/>.

Docket: Background documents or comments received may be read at <http://www.regulations.gov> at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Alan Sinclair, FAA, Airframe and Cabin Safety, ANM-115, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington 98057-3356; telephone 425-227-2195; facsimile 425-227-1320.

SUPPLEMENTARY INFORMATION: The FAA has determined that notice of, and opportunity for prior public comment on, these special conditions is impracticable because the substance of these special conditions has been subject to the public comment process in several prior instances with no substantive comments received. The FAA therefore finds that good cause exists for making these special conditions effective upon publication in the **Federal Register**.

Comments Invited

We invite interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

We will consider all comments we receive by the closing date for comments. We may change these special conditions based on the comments we receive.

Background

On March 29, 2012, Gulfstream Aerospace Corporation applied for a type certificate for their new Model GVII-G500 airplane. The Model GVII-G500 airplane will be a twin-engine, transport-category business jet capable of accommodating up to 19 passengers. The Model GVII-G500 airplane will have a maximum takeoff weight of 76,850 lbs.

Type Certification Basis

Under Title 14, Code of Federal Regulations (14 CFR) 21.17, Gulfstream must show that the Model GVII-G500 airplane meets the applicable provisions of 14 CFR part 25, as amended by Amendments 25-1 through 25-129.

If the Administrator finds that the applicable airworthiness regulations (*i.e.*, part 25) do not contain adequate or appropriate safety standards for the Model GVII-G500 airplane because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the type certificate for that model be amended later to include any other model that incorporates the same or similar novel or unusual design feature, the special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, Model GVII-G500 airplanes must comply with the fuel-vent and exhaust-emission requirements of 14 CFR part 34, and the noise-certification requirements of 14 CFR part 36. The FAA must issue a finding of regulatory adequacy under § 611 of Public Law 92-574, the "Noise Control Act of 1972."

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type certification basis under § 21.17(a)(2).

Novel or Unusual Design Feature

The Model GVII-G500 airplane will incorporate the following novel or unusual design feature:

Airbag systems on multiple-place and single-place side-facing seats.

Discussion

Side facing seats are considered a novel design for transport-category airplanes that include 14 CFR part 25, Amendment 25-64, in their certification bases, because this feature was not anticipated when those airworthiness standards were issued. Therefore, the existing regulations do not provide adequate or appropriate safety standards for occupants of side-facing seats. For the Model GVII-G500 airplane, FAA Special Conditions No. 25-618-SC, "Technical Criteria for Approving Side-Facing Seats," proposed special conditions to address the certification of single- and multiple-place side-facing seats. Those proposed special conditions include condition 2(e), which requires the axial rotation of the upper leg (femur) to be limited to 35 degrees in either direction from the nominal seat position. To accommodate that requirement, Gulfstream has developed a new airbag system that will be installed close to the floor, and which is designed to limit the axial rotation of the occupant's upper legs.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions are applicable to the Gulfstream Model GVII-G500 airplane. Should Gulfstream apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design feature, these special conditions would apply to that model as well.

Conclusion

This action affects only certain novel or unusual design features on one model of airplane. It is not a rule of general applicability.

The substance of these special conditions has been subjected to the notice and comment period in several prior instances and has been derived without substantive change from those

previously issued. It is unlikely that prior public comment would result in a significant change from the substance contained herein. Therefore, the FAA has determined that prior public notice and comment are unnecessary and impracticable, and good cause exists for adopting these special conditions upon publication in the **Federal Register**. The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment described above.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for Gulfstream Aerospace Corporation Model GVII-G500 airplanes.

In addition to the requirements of §§ 25.562 and 25.785, and Special Conditions No. 25-495-SC, the following special conditions are part of the type certification basis for the Gulfstream Model GVII-G500 airplane with leg-flail airbags installed on side-facing seats.

1. For seats with a leg-flail airbag system, the system must deploy and provide protection under crash conditions where it is necessary to prevent serious injury. The means of protection must take into consideration a range of stature from a 2-year-old child to a 95th-percentile male. At some buttock popliteal length and effective seat-bottom depth, the lower legs will not be able to form a 90-degree angle relative to the upper leg; at this point, the lower leg flail would not occur. The leg-flail airbag system must provide a consistent approach to prevention of leg flail throughout that range of occupants whose lower legs can form a 90-degree angle relative to the upper legs when seated upright in the seat. Items that need to be considered include, but are not limited to, the range of occupants' popliteal height, the range of occupants' buttock popliteal length, the design of the seat effective height above the floor, and the effective depth of the seat-bottom cushion.

2. The leg-flail airbag system must provide adequate protection for each occupant regardless of the number of

occupants of the seat assembly, considering that unoccupied seats may have an active leg-flail airbag system.

3. The leg-flail airbag system must not be susceptible to inadvertent deployment as a result of wear and tear, or inertial loads resulting from in-flight or ground maneuvers (including gusts and hard landings), and other operating and environmental conditions (vibrations, moisture, etc.) likely to occur in service.

4. Deployment of the leg-flail airbag system must not introduce injury mechanisms to the seated occupant, nor result in injuries that could impede rapid egress.

5. Inadvertent deployment of the leg-flail airbag system, during the most critical part of the flight, must either meet the requirement of § 25.1309(b), or not cause a hazard to the airplane or its occupants.

6. The leg-flail airbag system must not impede rapid egress of occupants from the airplane 10 seconds after airbag deployment.

7. The leg-flail airbag system must be protected from lightning and high-intensity radiated fields (HIRF). The threats to the airplane specified in existing regulations regarding lightning (§ 25.1316) and HIRF (§ 25.1317) are incorporated by reference for the purpose of measuring lightning and HIRF protection.

8. The leg-flail airbag system must function properly after loss of normal airplane electrical power, and after a transverse separation of the fuselage at the most critical location. A separation at the location of the leg-flail airbag system does not have to be considered.

9. The leg-flail airbag system must not release hazardous quantities of gas or particulate matter into the cabin.

10. The leg-flail airbag system installation must be protected from the effects of fire such that no hazard to occupants will result.

11. A means must be available to verify the integrity of the leg-flail airbag system's activation system prior to each flight, or the leg-flail airbag system's activation system must reliably operate between inspection intervals. The FAA considers that the loss of the leg-flail airbag system's deployment function alone (*i.e.*, independent of the conditional event that requires the leg-flail airbag system's deployment) is a major-failure condition.

12. The airbag inflatable material may not have an average burn rate of greater than 2.5 inches per minute when tested using the horizontal flammability test defined in part 25, appendix F, part I, paragraph (b)(5).

13. The leg-flail airbag system, once deployed, must not adversely affect the emergency-lighting system (*i.e.*, must not block floor-proximity lights to the extent that the lights no longer meet their intended function).

Issued in Renton, Washington, on June 8, 2017.

Michael Kaszycki,

Assistant Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 110

[Docket Number USCG-2015-0729]

RIN 1625-AA01

Port of Miami Anchorage Area; Atlantic Ocean, Miami Beach, FL

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is dividing its Miami anchorage ground into two separate anchorage areas. This action is necessary to reduce potential damage to threatened coral posed by anchoring vessels. The area for vessels to anchor will be reduced by approximately 3 square nautical miles, but this rule still leaves vessels with approximately 1.5 square miles of anchorage areas.

DATES: This rule is effective from July 19, 2017.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type USCG-2015-0729 in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Mr. Paul Lehmann, Coast Guard Seventh District Prevention Waterways Management Division, U.S. Coast Guard; telephone (305) 415-6796, email Paul.D.Lehmann@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
 DHS Department of Homeland Security
 FR Federal Register
 NPRM Notice of proposed rulemaking
 § Section
 U.S.C. United States Code

II. Background Information and Regulatory History

On December 1, 2015, the Coast Guard published a notice of study that indicated we were evaluating amending the Miami Anchorage, based on the location of coral reefs off the coast of Florida. The Coast Guard received four comments in response to the notice of study during the period that ended on February 1, 2016. In coordination with several interested parties, the Coast Guard published a Notice of Proposed Rulemaking (NPRM) on May 10, 2016 (81 FR 28788). Four additional comments were received in response to the NPRM. The comment period for the NPRM closed on July 11, 2016.

Through continued cooperation and research with stakeholders, the Coast Guard amended the original locations and requirements stated in the NPRM, and published these changes in a Supplemental Notice of Proposed Rulemaking (SNPRM), on February 22, 2017 (82 FR 11329). We received five written submissions on the SNPRM during the comment period that ended on March 24, 2017. We did not receive any oral comments.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 33 U.S.C. 471. The Seventh District Commander has determined that the new locations of the anchorage provide both a safe anchorage ground for vessels, as well as provide for protection of the coral reef and uphold the environmental protection mission of the Coast Guard.

IV. Discussion of Comments, Changes, and the Rule

On December 1, 2015, the Coast Guard published a notice of study that indicated we were evaluating amending the Miami Anchorage to divide the anchorage into two smaller anchorage areas. The proposed amendment was designed in coordination with a variety of local stakeholders, including the South East Florida Coral Reef Initiative (SEFCRI). Comment provided by these stakeholders, academic research, and environmental reports have raised concerns with the Coast Guard about the potential for damage to the Florida Reef in the Miami Anchorage. Examples of the body of work that influenced the Coast Guard in proposing this amendment may be found in the docket.

In response to the notice of study, the Coast Guard received four comments. These comments were addressed in an NPRM published on May 10, 2016. In response to the NPRM, we received four additional comments. Two of the

comments, one by the local non-profit Miami Waterkeeper and the other by a private citizen, supported our planned modification of the Miami Anchorage. The third and fourth comments were submitted by the Biscayne Bay Pilots Association.

The Biscayne Bay Pilots Association (pilots) submitted a comment, through Becky Hope of the Port of Miami, on May 17, 2016. This comment requested the Coast Guard evaluate changes in the proposed anchorage, including shifting the outer anchorage west and shifting the southern boundary of the outer anchorage north. In response to these comments, the Coast Guard met with the Pilots to discuss the requests and the basis at which we arrived at the current anchorage configuration. During the meeting the Coast Guard agreed to shift the western boundary of the outer anchorage approximately 300 feet to the west to provide more room for large anchoring vessels. This change does not have any effect on coral or hard bottom as the sea floor in that area is sand.

On June 11, 2016, the Pilots submitted a follow up comment to the public docket expressing concern that the outer anchorage would expose vessels to increased current and waves and, they claim, could increase the chance a vessel would drag anchor. In order to properly assess environmental conditions and risk of an anchor drag, the Coast Guard consulted with the National Weather Service and Maersk training center. The National Weather Service conducted a study, analyzing the previous year's current in the vicinity of the anchorage. The Weather Service found that the average current in the area of the outer anchorage over the previous year was approximately 1.2 knots, with currents ranging plus or minus half a knot from the mean current seventy percent of the time. This information was provided to the Maersk training center in Svendborg, Denmark. Subject matter experts at the training school indicated that the conditions posed no significant hazard and that captains would have the training and experience to set an anchor in the deeper waters of the outer anchorage.

Due to the additional changes requested by the various parties involved, we published a Supplemental Notice to Proposed Rulemaking on February 22, 2017. The Coast Guard received five comments in response to this SNPRM. The Florida Department of Environmental Protection supports this project as a means to reduce coral reef and hardbottom impacts. The additional comments were in support of the rule, citing the desire to protect natural resources while acknowledging
