Electronic copies of the proposed revised SOSMs are available in the docket information section of this notice. There are separate SOSM documents for each state. In general, all documents have similar language with the exception that the South Dakota and North Dakota SOSM contains procedures for playa wetlands. Playa

wetlands do not exist in either Minnesota or Iowa. NRCS is seeking comments on the revisions to these documents. Each document's revisions (deletions, additions, and strike-throughs) can be viewed in a “track changes” format. Requests for paper versions or inquiries may be directed to Paul Flynn, Wetland Project Manager, U.S. Department of Agriculture, Natural Resources Conservation Service, 375 Jackson Street, Suite 600, St. Paul, Minnesota 55101.

SUPPLEMENTARY INFORMATION: To fully understand the proposed revisions, individuals are encouraged to compare these changes with each State's current version as shown on each State's Web site. To aid in this comparison, following are highlights of the proposed revisions to each State's SOSM by section:

2.1 Develop a Base Map

- Clarifies that sampling unit boundaries as viewed on aerial imagery can be adjusted using other references including Light Detection and Ranging data.

- Reinforces that for sites without pre-1985 manipulation sampling units can be identified using references other than aerial imagery.

- Provides clarification that all sampling units recorded on the Base Map reflect consideration of Normal Environmental Conditions and sites with pre-1985 drainage also accurately reflect the condition of the drainage.

- Provides direction that drainage manipulations and their approximate year of installation will be identified on the base map or another reference.

2.2.1 and 2.3.1 Hydrophytic Vegetation

- Clarifies how the Official Soil Description (OSD) section titled “Use and Vegetation” can be used in verifying hydrophytic vegetation.

2.2.3, 2.3.3, and 2.4.2 Wetland Hydrology

- Clarifies that wetland hydrology for sites without pre-1985 drainage is determined to be present when wetness signatures are found on 50 percent or more of imagery reviewed.

- Explains that the wetland hydrology review for sites without pre-1985 drainage consists of all available normal years starting with the 2014 image year and going back to 1980.

- Clarifies how wetness signatures are defined and annotated on the data sheet.

- Allows that when a normal year image is of poor quality such that wetness signatures are not discernable,

those image years can be excluded from the imagery review.

- Defines the term “all available” when used with aerial images or photography.

2.4.3 Wetland Hydrology (With Pre-1985 Drainage)

- Explains how the agency expert determines the best drainage condition of the sampling unit.

- Explains how, after determining the best drained condition, the agency expert uses aerial imagery to determine when wetland hydrology is positive or negative.

3.1 Verification of Pre-1985 Cropping History

- Allows verification based on person provided records that document cropping history.

3.2 Verification of Pre-December 23, 1985, Manipulation(s)

- Adds additional references that can be used to make this determination.

3.3 Verification of Post-1985 Potential Conversion

- Provides that verification will include review of the most recent year of aerial photography available.

3.5.1 Verification of Presence of Woody Vegetation as of December 23, 1985

- Adds this verification as an independent determination.

3.6 Determination of the Required Conditions for the Following WC Labels

- Deletes this entire Section including Table 1. Guidance in the National Food Security Act Manual will be followed to apply USDA wetland labels.
