#### SUPPLEMENTARY INFORMATION:

*Background:* The RoC is a congressionally mandated, science-based, public health report that identifies agents, substances, mixtures, or exposures (collectively called “substances”) in our environment that pose a cancer hazard for people in the United States. NTP prepares the RoC on behalf of the Secretary of Health and Human Services. NTP follows an established, four-part process for preparation of the RoC (<https://ntp.niehs.nih.gov/pubhealth/roc/process/index.html>). For each substance selected for review, a draft RoC monograph is prepared that presents (1) information on human exposure to the substance; (2) an assessment of the evidence from cancer studies in humans and experimental animals, mechanisms of carcinogenicity, and other data relevant for evaluating the substance’s potential carcinogenicity; and (3) NTP’s preliminary preliminary RoC listing recommendation. The draft monograph also contains a draft profile that provides the NTP’s preliminary listing

recommendation for the substance and a summary of the scientific evidence considered key to reaching that recommendation.

Haloacetic acids found as drinking water by-products were selected for review following solicitation of public comment, review by the NTP Board of Scientific Counselors on April 11, 2016, and approval by the NTP Director (<https://ntp.niehs.nih.gov/go/9741>).

Water disinfection is among the most important and beneficial public health advances of the 20th century and has substantially reduced United States incidence of cholera, typhoid, and amoebic dysentery caused by waterborne pathogens. A consequence of the water disinfection process is formation of a large number of unintended compounds from chemicals and organic material in the water; these unintended chemicals are of potential public health concern. Haloacetic acids are the second largest group by weight (36%) of total halogenated disinfection by-products found in public water supplies. The draft RoC monograph includes a cancer hazard assessment of 13 haloacetic acids containing chlorine, bromine, or iodine, or a combination of these halogens that have been identified in disinfected water.

*Meeting and Registration:* The meeting is open to the public with time set aside for oral public comment; attendance at the NIEHS is limited only by the space available. Registration to attend the meeting in-person and/or view the webcast is by July 24, 2017, at <https://ntp.niehs.nih.gov/go/38853>. Registration is required to view the webcast; the URL for the webcast will be provided in the email confirming registration. Visitor and security information for those attending in-person is available at <https://www.niehs.nih.gov/about/visiting/index.cfm>. Individuals with disabilities who need accommodation to participate in this event should contact Canden Byrd by phone: (919) 293-1660 or email: [can.den.byrd@icf.com](mailto:can.den.byrd@icf.com). TTY users should contact the Federal TTY Relay Service at (800) 877-8339. Requests should be made at least five business days in advance of the event.

The draft monograph and preliminary agenda will be available on the NTP Web site at <https://ntp.niehs.nih.gov/go/38853>. The draft monograph should be available by June 7, 2017. Additional information will be posted when available or may be requested in hardcopy, see **FOR FURTHER INFORMATION CONTACT**. Following the meeting, a report of the peer review will be prepared and made available on the NTP Web site. Individuals are
