

Regulations part 651, Environmental Analysis of Army Actions (AR 200–2), and DLA's regulation for NEPA compliance, DLA Regulation 1000.22, Environmental Considerations in DoD Actions. However, because DLA is a tenant on Red River Army Depot, a U.S. Army-supported installation, this EA is subject to compliance with U.S. Army implementing regulations for NEPA. DLA has determined that the Proposed Action would not have a significant impact on the human environment within the context of NEPA. Therefore, the preparation of an environmental impact statement is not required.

Comments received by the end of the 30-day period will be considered when preparing the final version of the documents. The EA is available electronically at the Federal eRulemaking Portal at <http://www.regulations.gov>, and in hardcopy at the County Clerk's Office at the Bowie County Courthouse, 710 James Bowie Drive, New Boston, TX 75570.

Title of Collection: Personal Authentication Service (PAS) for FSA ID.

OMB Control Number: 1845–0131.

Type of Review: An extension of an existing information collection.

Respondents/Affected Public: Individuals or Households.

Total Estimated Number of Annual Responses: 55,300,000.

Total Estimated Number of Annual Burden Hours: 14,715,000.

Abstract: Federal Student Aid (FSA) replaced the PIN system with the Personal Authentication Service (PAS) which will employ an FSA ID, a standard user name and password solution. In order to create an FSA ID to gain access to certain FSA systems (FAFSA on the Web, NSLDS,

StudentLoans.gov, etc.) a user must register on-line for an FSA ID account. The FSA ID allows the customer to have a single identity, even if there is a name change or change to other personally identifiable information. The information collected to create the FSA ID enables electronic authentication and authorization of users for FSA web-based applications and information and protects users from unauthorized access to user accounts on all protected FSA sites.

[Project No. 14859–000]

Big Chino Valley Pumped Storage LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On September 29, 2017, Big Chino Valley Pumped Storage LLC (Big Chino)

filed an application for a preliminary permit, pursuant to section 4(f) of the Federal Power Act, proposing to study the feasibility of the Big Chino Valley Pumped Storage Project (project) to be located near Chino Valley in Yavapai, Coconino, and Mohave Counties, Arizona. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project will be closed-loop. Water to initially fill the reservoirs and required make-up water will be pumped from locally available groundwater sources. The proposed project would consist of an upper and lower reservoir, a 10.1-mile-long water conveyance system connecting the two reservoirs, a powerhouse, and three 500-kV transmission lines. A 2,900-foot-long, 360-foot-high rockfill, concrete-faced dam would be constructed to form the 50-acre upper reservoir, which would have a storage capacity of 19,739-acre-foot at an elevation of 6,560 feet. A 2,700-foot-long, 250-foot-high rockfill, concrete-faced dam would be constructed to form a 50-acre lower reservoir with a storage capacity of 19,811-acre-foot at an elevation of 5,294 feet. Water would be conveyed from the upper reservoir to the lower reservoir via two upper reservoir inlet/outlets, two vertical shafts, two horizontal power tunnels, two penstock manifold tunnels, and eight 12-foot-diameter, steel-lined penstocks. The powerhouse would contain eight pump-turbine/motor-generator units rated at 250 MW each. From the powerhouse, water will discharge into eight, 16-foot diameter draft tubes from each unit and then into two, 32-foot-diameter tailrace tunnels, which will discharge into the lower reservoir through a lower reservoir inlet/outlet structure. Project power would be transmitted through a 30-mile-long 500-kilovolt (kV), line traversing northerly to interconnect with the existing Arizona Public Service owned and operated Eldorado-Moenkopi 500-kV line or a planned and sited new Dine Navajo Transmission Project 500-kV line from Moenkopi to Marketplace; a 54-mile long 500-kV traversing westerly to interconnect with an existing Western Area Power Administration owned and operated 230-kV line from Prescott to Peacock that would be upgraded to 500 kV; and a 47-mile-long 500-kV line traversing easterly to interconnect with

two Navajo Southern Transmission 500-kV lines owned by participants of the Navajo Generating Plant and operated by Arizona Public Service.

The estimated annual generation of the project would be 4,614 gigawatt-hours.
