#### II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, "Reactor Site Criteria." The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on August 9, 2017, (82 FR 37241).

1. *The title of the information collection:* “10 CFR part 100, Reactor Site Criteria.”

2. *OMB approval number:* 3150–0093.

3. *Type of submission:* Extension.

4. *The form number if applicable:* Not applicable.

5. *How often the collection is required or requested:* As necessary in order for the NRC to assess the adequacy of proposed seismic design bases and the design bases for other site hazards for nuclear power and test reactors constructed and licensed in accordance with parts 50 and 52 of title 10 of the *Code of Federal Regulations* and the Atomic Energy Act of 1954, as amended.

6. *Who will be required or asked to respond:* Applicants who apply for an early site permit (ESP), combined license (COL) or a construction permit (CP) or operating license (OL) on or after January 10, 1997.

7. *The estimated number of annual responses:* 1.3.

8. *The estimated number of annual respondents:* 1.3.

9. *An estimate of the total number of hours needed annually to comply with the information collection requirement or request:* 94,900 hours (73,000 hours per application × 1.3 applications).

10. *Abstract:* Title 10 of the *Code of Federal Regulations*, Part 100, “Reactor Site Criteria,” establish approval requirements for proposed sites for the purpose of constructing and operating stationary power and testing reactors. Subpart B, “Evaluation Factors for Stationary Power Reactor Site Applications on or After January 10, 1997,” requirements apply to applicants who apply for an early site permit (ESP), combined license (COL) or a construction permit (CP) or operating license (OL) on or after January 10, 1997. This clearance is necessary since the NRC is expecting approximately two COL, one CP, and one OL application over the next 3 years. The applicants must provide information regarding the physical characteristics of the site in addition to the potential for natural phenomena and man-made hazards. This includes information on meteorological hazards (such as hurricanes, tornadoes, snowfall, and extreme temperatures), hydrologic hazards (such as floods, tsunami, and seiches) geologic hazards (such as faulting, seismic hazards, and the maximum credible earthquake) and factors such as population density, the proximity of man-related hazards, and site hydrological and atmospheric dispersion characteristics. The NRC staff reviews the submitted information and, if necessary, generates a request for additional information. The staff meets

with the applicant and conducts a site visit to resolve any open issues. When the open issues have been resolved, the staff writes the final safety evaluation report, which is published and used as a basis for the remainder of the NRC licensing process.

Dated at Rockville, Maryland, this 17th day of January 2018.

For the Nuclear Regulatory Commission.

**David Cullison,**

*NRC Clearance Officer, Office of the Chief Information Officer.*

**SUPPLEMENTARY INFORMATION:** Notice is hereby given that the Director, Office of Nuclear Reactor Regulation, has issued a revised director’s decision (ADAMS Accession No. ML18005A053) under section 2.206 of title 10 of the *Code of Federal Regulations* (10 CFR), on a petition filed by the Petitioners on February 19, 2016 (ADAMS Accession No. ML16050A223).

The Petitioners requested that the NRC take enforcement action against all operating nuclear power plants. Specifically, the Petitioners requested that the NRC either: (1) Issue orders to require immediate corrective actions including compensatory measures to address the operability of electric power systems in accordance with their plant technical specifications, and to implement plant modifications in accordance with current NRC regulatory requirements and staff guidance provided in the references within the 2.206 petition; or (2) issue orders to immediately shut down the nuclear power plants that are operating without addressing the significant design deficiency identified in NRC Bulletin 2012–01, “Design Vulnerability in Electric Power System,” dated July 27, 2012, (ADAMS Accession No. ML12074A115) since the licensees are not in compliance with their technical specifications (typically Section 3.8.1) related to onsite and offsite power systems.

On February 24, 2016, the NRC’s petition manager acknowledged receipt of the petition and offered the Petitioners an opportunity to address the Petition Review Board (PRB). The Petitioners declined an opportunity to address the PRB on the basis that the petition already contained all of the
