Abstract: Under the Long Term 2
 Enhanced Surface Water Treatment Rule
 (LT2ESWTR), EPA requires public water
 systems (PWS) to use approved
 laboratories when conducting
Cryptosporidium monitoring. The Code
 of Federal Regulations (CFR) at 40 CFR
 141.705(a) provides for approval of
Cryptosporidium laboratories by “an
 equivalent” state laboratory certification
 program (*i.e.*, equivalent to EPA's
 Laboratory Quality Assurance
 Evaluation Program). In the preamble to
 the LT2ESWTR as well as several other
 notices, EPA has described the criteria
 for approval of laboratories to analyze
Cryptosporidium samples under the
 LT2ESWTR.

Form Numbers: None.

Respondents/affected entities:
 Interested states and laboratories.

Respondent's obligation to respond:
 Voluntary.

Estimated number of respondents: 43
 labs and 20 states/territories.

Frequency of response: Annual.

Total estimated burden: 3,741 hours
 (per year). Burden is defined at 5 CFR
 1320.03(b).

Total estimated cost: \$669,490,
 includes \$332,891 annualized capital or
 operation & maintenance (O&M) costs.

Changes in Estimates: There is a decrease of 1,731 hours and \$134,284 in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease is due to a reduced number of laboratories (45 to 43), re-evaluation of hours for tasks, and an improved demonstration of capability by the laboratories.

Director, Regulatory Support Division.

SUPPLEMENTARY INFORMATION:

I. Background Information on IRIS Assessment Plans

EPA's IRIS Program is a human health assessment program that evaluates quantitative and qualitative risk information on effects that may result from exposure to chemicals found in the environment. Through the IRIS Program, EPA provides the highest quality science-based human health assessments to support the Agency's regulatory activities and decisions to protect public health. As part of scoping and initial problem formulation activities prior to the development of a draft assessment, the IRIS Program carries out a broad, preliminary literature survey to assist in identifying health effects that have been studied in relation to the chemical or substance of interest, as well as science issues that may need to be considered when evaluating toxicity. This information, in conjunction with scoping needs identified by EPA program and regional offices, is used to inform the development of an IRIS Assessment Plan (IAP).

The IAP communicates the plan for developing each individual chemical assessment to the public and includes summary information on the IRIS Program's scoping and initial problem formulation, objectives and specific aims for the assessment, and a PECO (Populations, Exposures, Comparators, and Outcomes) for the systematic review. The PECO provides the framework for developing literature search strategies and inclusion/exclusion criteria, particularly with respect to evidence stream (*i.e.*, human, animal, mechanistic), exposure measures and outcome measures. The IAP serves to inform the subsequent development of chemical-specific systematic review protocols, which will be made publicly available.

II. Public Webinar

In order to allow for public input, EPA is convening a public webinar to discuss the draft IRIS Assessment Plan for Uranium March 22, 2018. Specific teleconference and webinar information regarding this public meeting will be provided through the IRIS website (<https://www.epa.gov/iris>) and via EPA's Human Health Risk Assessment (HHRA) and IRIS listservs. To register for the HHRA or IRIS listserv, visit the IRIS website (<https://www.epa.gov/iris>) or visit <https://www.epa.gov/iris/forms/>
