

is filing this petition for modification with respect to the power coming to each transformer station.

(5) The petitioner proposes the following alternative method to be utilized.

(a) Petitioner will install LBU II Loadbreaker fuse cutouts at each transformer station underground (branch power station) where feasible as a means of disconnecting the 2,300-volt power supply.

(b) Such cutouts will be installed at least 9 feet above the mine floor in the open air. It will be possible to operate such switches from the mine floor.

(c) A properly rated hot stick will be utilized to break the fuse under load if necessary.

(d) The miner using such hot stick will utilize appropriate Personal Protective Equipment.

(e) If it becomes necessary to lock and tag out the Loadbreaker cutouts, appropriate procedures will be utilized, including, either disabling the hot stick with a lockout device covering the hook or removing the fuse cutouts from their holders and locking them in a box.

(f) Within 60 days after the Proposed Decision and Order becomes final, the petitioner will submit proposed revisions for its approved 30 CFR part 48 training plan to the District Manager for the area in which the mine is located. These proposed revisions will specify task training for miners designated to perform electrical work under the requirements of this petition.

The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same measure of protection afforded by the existing standard.
