

(2) The surface wellhead will be maintained open to bring the vertical section of the wellbore to outside atmospheric pressure.

(g) In addition, the petitioner proposes to do the following:

(1) Install drivage sites within 80 feet of the mine-through point.

(2) Provide firefighting equipment near the working face, including two 10—pound fire extinguishers, 240 pounds of rock dust, and fire hose of sufficient length to reach the working face and capable of delivering at least 50 gallons per minute of water at minimum pressure of 50 pounds per square inch.

(3) Supply a quantity of at least 9,000 CFM of intake air at the face, but no less than the approved ventilation plan amount, of intake air at the face.

(4) Calibrate the continuous miner methane monitor on one of the five production shifts prior to the shift during which the mine-through is anticipated.

(5) Test for methane with a hand-held methane detector at least every 10 minutes during the time mining is conducted within 30 feet of the wellbore.

(6) Deenergize all equipment and thoroughly examine the area when the wellbore is intersected.

(7) Continue hand-held methane detector tests at least every 10 minutes during production shifts until mining has progressed 20 feet past the initial mine-through point once the area has been determined to be safe and mining has resumed.

(h) Only company personnel, personnel from MSHA, and personnel from the appropriate West Virginia agency will be permitted in the area of the mine-through operation.

(i) The mine-through operation will be under the direct supervision of the certified official. Instructions concerning the mine-through operation will be issued only by a certified official.

The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same measure of protection from the potential hazards against which the existing standard was intended to guard.

Director, Office of Standards, Regulations, and Variances.
