Up to 60 Kemp's ridley and 30 loggerhead sea turtles, annually, would be captured by strike net, biologically sampled (blood, scute, tissue), tagged (PIT, flipper), transported to and temporarily held in a facility for opportunistic fecal collection, photographed, measured, and weighed prior to release. A subset of captured Kemp's ridley and loggerhead sea turtles also would receive a satellite tag or radio and sonic tags prior to release. Up to 20 green sea turtles, annually, would be captured by strike net, biologically sampled (blood, scute, tissue), tagged (PIT, flipper), photographed, measured, weighed, and receive a satellite tag or radio and sonic tags prior to release. Up to five hawksbill sea turtles, annually, would be captured by strike net, biologically sampled (blood, scute, tissue), tagged (PIT, flipper), photographed, measured, and weighed prior to release. The permit would be valid for 10 years from the date of issuance.
