

the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities. Tables 7 and 8 provide numbers of authorized take by Level A harassment and Level B harassment. These are the numbers we use for purposes of the small numbers analysis.

The numbers of marine mammals for which we have authorized take across the two surveys would be considered small relative to the relevant populations (a maximum of 14.7 percent) for the species for which abundance estimates are available. Several small resident or insular populations that could experience Level B harassment during the Hawaii survey were discussed in the Estimated Take section. For the Kohala resident stock of melo-headed whales (pop. 447), NMFS assumed that up to 3 groups of 20 Kohala residents could be taken by Level B harassment, representing 13.4 percent of the Kohala stock, if they enter the zone undetected by PSOs.

Additionally, the range of the Hawaiian Island stock overlaps the range of the Kohala resident stock. Therefore, any melon-headed whale takes within the Kohala resident stock's range could also be from either stock. Seismic operations will occur in the ranges of the Hawaiian Island stock (pop. 128) and Oahu stock (pop. 743) of common bottlenose dolphins. Based on GIS analysis of the tracklines and the ranges of the stocks, NMFS determined that 7 percent of the Hawaii Island stock and 1.2 percent of the Oahu stock could be exposed to Level B harassment. Similar GIS analysis of the Hawaii Island (pop. 631) and Oahu/4-Island (pop. 355) stocks of spinner dolphins resulted in estimated Level B harassment of 3.8 percent of the Hawaii Islands stock population and 6.7 percent of the Oahu/4-Island stock population. Analysis of pantropical spotted dolphins determined that there would be 9 Oahu stock exposures and 82 Hawaii Island stock exposures. The populations of these stocks are unknown, so the percentage of stocks affected cannot be determined. However, the large ranges of these species (up to 20 km from Oahu and 65 km from Hawaii) make it likely that the survey would only impact limited numbers of these stocks.

Based on the analysis contained herein of the planned activity (including the required mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS finds that small numbers of marine mammals will

be taken relative to the population size of the affected species.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act (ESA)

Section 7(a)(2) of the Endangered Species Act of 1973 (ESA: 16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally, in this case with the ESA Interagency Cooperation Division, whenever we propose to authorize take for endangered or threatened species.

The NMFS Permits and Conservation Division issued a Biological Opinion on August 24, 2018 to NMFS's Office of Protected Resources which concluded that the specified activities are not likely to jeopardize the continued existence of the North Pacific right whale, sei whale, fin whale, blue whale, sperm whale, Western North Pacific DPS humpback whale, gray whale, Hawaiian Islands Insular DPS false killer whale, and the Hawaiian monk seal or adversely modify critical habitat because none exists within the action area.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216-6A, NMFS must review the proposed action (*i.e.*, the issuance of regulations and an LOA) with respect to potential impacts on the human environment.

Accordingly, NMFS has adopted the L-DEO Final Environmental Assessment (EA), *Environmental Assessment/Analysis of Marine Geophysical Surveys by the R/V Marcus G. Langseth in the North Pacific Ocean, 2018/2019* and after an independent evaluation of the document found that it included adequate information analyzing the effects on the human environment of issuing incidental take

authorizations. In August 2018, NMFS issued a Finding of No Significant Impact (FONSI).

Authorization

As a result of these determinations, we have issued an IHA to L-DEO for conducting seismic surveys in the Pacific Ocean near the main Hawaiian Islands and the Emperor Seamounts area from September 1, 2018 through August 31, 2019, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated.
