(8) Nonpermissible electronic testing and diagnostic equipment will not be used if methane is detected in concentrations at or above one percent. When methane is detected at such levels while the nonpermissible electronic testing and diagnostic equipment is being used, the equipment will be deenergized immediately and withdrawn out by the last open crosscut.

(9) All hand-held methane detectors will be MSHA-approved and maintained in permissible and proper operating condition as defined in 30 CFR 75.320.

(10) Coal production will cease, except for the time necessary to troubleshoot under actual mining conditions. Coal may remain in or on the equipment in order to test and diagnose the equipment under load. Accumulations of coal and combustible materials referenced in 30 CFR 75.400 will be removed before testing begins to provide additional safety to miners.

(11) Nonpermissible electronic test and diagnostic equipment will not be used to test equipment when float coal dust is in suspension.

(12) All electronic and diagnostic equipment will be used in accordance with the manufacturer's recommended safe use procedures.

(13) Qualified personnel engaged in the use of nonpermissible electronic testing and diagnostic equipment will be properly trained to recognize the hazards and limitations associated with the use of such equipment in areas where methane could be present.

(14) The nonpermissible electronic testing and diagnostic equipment will not be put into service until MSHA has inspected the equipment and determined that it is in compliance with all the above terms and conditions.

(15) Cables supplying power to low-voltage testing and diagnostic equipment will only be used when permissible testing and diagnostic equipment is unavailable.

(16) Within 60 days after the Proposed Decision and Order (PDO) becomes final, the petitioner will submit proposed revisions for its approved 30 CFR part 48 training plan to the District Manager. The revisions will specify initial and refresher training regarding the terms and conditions in the PDO.

The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same

measure of protection afforded by the existing standard.
