BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended, and the Determination of the Chief Operating Officer, CDC, pursuant to Public Law 92-463. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP)-PS19-003, Using Real-time Prescription and Insurance Claims Data to Support the HIV Care Continuum.

Dates: March 6-7, 2019.

Time: 10:00 a.m.-5:00 p.m., (EDT).

Place: Teleconference, Centers for Disease Control and Prevention, Room 1080, 8 Corporate Square Blvd., Atlanta, GA 30329.

Agenda: To review and evaluate grant applications.

For Further Information Contact: Gregory Anderson, M.S., M.P.H., Scientific Review Officer, CDC, 1600 Clifton Road NE, Mailstop E60, Atlanta, Georgia 30333, (404) 718-8833, gca5@cdc.gov.

The Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Sherri Berger,

Chief Operating Officer, Centers for Disease Control and Prevention.

[30Day-19-18ANU]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled Communities Organized To Prevent Arboviruses: Assessment of Knowledge, Attitudes, and Vector Control Practices and Sero-Prevalence and Incidence of Arboviral Infection in Ponce, Puerto Rico (COPA Study) to the Office of Management and Budget (OMB) for review and approval. CDC previously published a "Proposed Data Collection Submitted for Public Comment and Recommendations" notice on July 20, 2018 to obtain comments from the public and affected agencies. CDC did not receive comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570 or send an email to omb@cdc.gov. Direct written comments and/or suggestions regarding the items contained in this

notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395-5806. Provide written comments within 30 days of notice publication.

Proposed Project

Communities Organized To Prevent Arboviruses: Assessment of Knowledge, Attitudes, and Vector Control Practices and Sero-Prevalence and Incidence of Arboviral Infection in Ponce, Puerto Rico (COPA)—Existing Collection in use without an OMB Control Number—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Recent years have seen the emergence of two epidemic arthropod-borne viruses (arboviruses) that are transmitted by Aedes aegypti mosquitoes. Chikungunya virus was introduced into the Caribbean in late 2013, and caused large epidemics of fever with severe joint pain throughout the Caribbean and Americas in 2014. Zika virus was first detected in the Americas in Brazil in 2014, spread throughout the Americas, and has since been associated with devastating birth defects, Guillain-Barre syndrome, and is the first arbovirus that can also be transmitted through sexual contact. In addition, the four viruses that cause dengue were introduced to the Americas over the past several hundred years and have since become endemic, and yellow fever virus has recently caused large outbreaks in Brazil and there is risk of importation to other counties in the Americas.

In all of these cases, the public health response to the spread of these arboviruses throughout the tropics, where their mosquito vectors thrive, has been hampered by a lack of sustainable and effective interventions to prevent infection with any of these arboviruses at the community level. Additionally, the rapid speed with which new arboviruses spread does not often provide the time needed to plan and implement community-level interventions to decrease disease transmission. Although several candidate vaccines for chikungunya and Zika are currently in clinical development, none are yet available. A dengue vaccine has been licensed in several countries, but initial analyses have suggested that decades will be needed before it results in reduction in transmission of dengue virus.

In recent years, community based strategies for vector control have been

studied and implemented in different countries as an alternative to vertical strategies (e.g. insecticide spraying delivered by government agencies). A new intervention has recently been demonstrated to reduce the rates of infection with common tropical arboviruses transmitted by *Ae. aegypti* mosquitos (i.e., dengue, chikungunya, and Zika viruses). The Camino Verde approach utilizes community mobilization to motivate clean-up campaigns to reduce rates of dengue virus infections in Nicaragua and Mexico. However, the intervention occurred in small communities, and has not been evaluated in an urban setting. There is therefore a need to determine the effectiveness of such types of interventions in relatively large, urban communities.

Research suggests that vector control programs that have substantial community participation can have significant and lasting impacts on vector density, and are more cost-effective than vertically structured programs. In addition, these types of programs have been reported to readily integrate with other health or development programs, promote an enduring sense of pride in the home and community, and make use of politically viable vector control strategies.

The purpose of this study is to establish longitudinal follow-up of a community cohort and evaluate the impact of vector control interventions in 14 communities in southern Puerto Rico. The study investigators have prior experience working in these communities; however, there is minimal available information regarding the prevalence or incidence of infection with tropical arboviruses, density of *Ae. aegypti* mosquitos, or community members' knowledge, attitudes, and

practices regarding behaviors intended to avoid mosquitos. Such information will be needed to inform decision-making regarding the location, design, and content of interventions to be implemented and evaluated to reduce the burden of these pathogens.

The questionnaire section will vary depending on age and day of birth of each participant. A questionnaire with general household questions will be administered to one household representative in each home with one or more participants. This representative should be 21 years or older, or an emancipated minor. If all eligible household members are unemancipated minors, a household member over the age of 50 may act as household representative and complete this section of the survey only. A questionnaire on socio-demographic information will be administered to all participants. The assessment of knowledge, attitudes, and practices questionnaire will be administered to all participants seven years and older with questions adapted for ages: 7–11 (younger child), 12–13 (older child), 14–50 (adult). A vector control tools questionnaire will be administered to all participants 21 years or older born on an odd numbered day of the month. The questionnaire will be administered after written consent and verbal assent (when appropriate) from those present in the household at the time of the visit. The knowledge, attitudes, and practices questionnaire will be focused on vector control, healthcare-seeking behavior, and disease occurrence. We will collect demographic information (e.g., age, sex, duration of time residing in Puerto Rico), travel history, and information on recent illnesses from all participants via household (and individual) questionnaires. Parents or guardians

will serve as proxy respondents for children aged <7 years. The questionnaires will be administered after written consent and verbal assent (when appropriate) from those present in the household at the time of the visit. GPS coordinates will also be collected for each household visited to later assess for potential clustering of arboviral infections within communities. We will ask participants if they have been ill with arbovirus-like illness (i.e., fever, rash, joint pain, and conjunctivitis) in the past year. If so, we will collect details on the symptoms experienced during their illness. The questionnaires will be administered to all randomly selected residents of the 14 communities in Ponce. At the time of the questionnaire administration, ~15 mL of blood will be collected to conduct serological testing of arboviruses for a sero-survey. The sero-survey and socio-demographic questionnaire will be repeated every 12 months after the initial assessment, up to a period of five years. OMB clearance will be extended after three years. This project will allow the evaluation of a community based approach for vector control strategies in Ponce, Puerto Rico. The information obtained will inform decision making regarding the location, design, and content of future interventions to be implemented and evaluated to reduce the burden of arboviral disease in Puerto Rico. Incidence and prevalence of arboviral disease will be estimated to guide control programs development and fill the current knowledge gaps.

There is no burden on respondents other than the time needed to participate. Estimated annual burden is 2,416 hours. Authorizing legislation comes from Section 301 of the Public Health Service Act.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
Ponce residents	Household representative questionnaire	2,506	1	10/60
	Socio-demographic questionnaire	2,996	1	15/60
	Knowledge, attitudes, and practices individual questionnaire.	2,996	1	15/60
	Vector control tools questionnaire	600	1	25/60
	Specimen collection	2,996	1	5/60

Jeffrey M. Zirger,

Acting Lead, Information Collection Review Office, Office of Scientific Integrity, Office of Science, Centers for Disease Control and Prevention.

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[60Day-19-0612; Docket No. CDC-2018-0111]

Proposed Data Collection Submitted for Public Comment and Recommendations

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice with comment period.

SUMMARY: The Centers for Disease Control and Prevention (CDC), as part of its continuing effort to reduce public burden and maximize the utility of government information, invites the general public and other Federal agencies the opportunity to comment on a proposed and/or continuing information collection, as required by the Paperwork Reduction Act of 1995. This notice invites comment on a proposed information collection project on the Well-Integrated Screening and Evaluation for Women Across the Nation (WISEWOMAN) program. The WISEWOMAN program is designed to prevent, detect, and control, hypertension and other cardiovascular disease risk factors through healthy behavior support services, which are tailored for individual and group behavior change.

DATES: CDC must receive written comments on or before February 25, 2019.

ADDRESSES: You may submit comments, identified by Docket No. CDC-2018-0111 by any of the following methods:

- *Federal eRulemaking Portal:* Regulations.gov. Follow the instructions for submitting comments.

- *Mail:* Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS-D74, Atlanta, Georgia 30329.

Instructions: All submissions received must include the agency name and Docket Number. CDC will post, without change, all relevant comments to Regulations.gov.

Please note: Submit all comments through the Federal eRulemaking portal

(regulations.gov) or by U.S. mail to the address listed above.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the information collection plan and instruments, contact Jeffrey M. Zirger, Information Collection Review Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS-D74, Atlanta, Georgia 30329; phone: 404-639-7570; Email: *omb@cdc.gov*.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501-3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. In addition, the PRA also requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each new proposed collection, each proposed reinstatement of existing collection of information, and each reinstatement of previously approved information collection before submitting the collection to the OMB for approval. To comply with this requirement, we are publishing this notice of a proposed data collection as described below.

The OMB is particularly interested in comments that will help:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
3. Enhance the quality, utility, and clarity of the information to be collected; and
4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.
5. Assess information collection costs.

Proposed Project

Well-Integrated Screening and Evaluation for Women Across the Nation (WISEWOMAN) (OMB No. 0920-0612, Exp. 12/31/2018)—Reinstatement—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The WISEWOMAN program sponsored by the CDC, provides services to low income, uninsured, or underinsured women aged 40-64. The WISEWOMAN program is designed to prevent, detect, and control hypertension and other CVD risk factors through healthy behavior support services which are tailored for individual and group behavior change. The WISEWOMAN program provides services to women who are jointly enrolled in the National Breast and Cervical Cancer Early Detection Program (NBCCEDP), which is also administered by CDC.

The WISEWOMAN program is administered by state health departments and tribal programs. In 2018, new five-year cooperative agreements will be awarded under Funding Opportunity Announcement DP18-1816, subject to the availability of funds. CDC collects two types of information from WISEWOMAN awardees. The WISEWOMAN awardee submits an electronic data file to CDC twice per year. The Minimum Data Elements (MDE) file contains data using a unique identifier with client-level information about cardiovascular disease risk factors, types of healthy behavior support services for participants served by the program. The estimated burden per response for the MDE file is 24 hours. The Annual Progress Report provides a narrative summary of each awardee's objectives and the activities undertaken to meet program goals. The estimated burden per response is 16 hours.

There are no changes to the information collected. CDC will continue to use the information collected from WISEWOMAN awardees to support program monitoring and improvement activities, evaluation, and assessment of program outcomes. The overall program evaluation helps to demonstrate program accomplishments and strengthen the evidence for strategy implementation for improved engagement of underserved populations. It can also determine whether the identified strategies and associated activities can be implemented at various levels within a state or tribal organization. Evaluation is also designed to demonstrate how WISEWOMAN can obtain cardiovascular disease health outcome data on at-risk populations, promote public education about cardiovascular disease risk-factors, and improve the availability of healthy behavior support services for under-served women.
