

future lease sales or discouraging exploration, development, or production under other leases or by interfering with potential future renewable energy activities).

Thus, the issues related to DIP of pipeline valves and fittings and other pipeline-related infrastructure in deepwater are potentially complex, especially in light of the size and scope of some projects. Accordingly, BSEE invites the public to submit relevant information and comments on such issues in order to help BSEE establish a consistent and reasonable approach to consideration of requests to allow DIP of pipeline valves and fittings and other pipeline-related infrastructure in deepwater.

## II. Request for Information

BSEE would appreciate your views, and any relevant technical information you can provide, on whether and under what circumstances it would be appropriate for BSEE to approve DIP of pipeline valves and fittings (pursuant to § 250.1751(g)) and of other pipeline-related infrastructure (pursuant to § 250.142) in deepwater. Among other issues, BSEE would appreciate comments and information related to whether DIP of pipeline valves and fittings or other pipeline-related infrastructure in deepwater: (1) Could increase (or decrease) safety or environmental risks as compared to decommissioning by removal; or (2) could interfere with navigation, create an obstruction, or otherwise unduly interfere with present or future uses of the OCS.

Please be as specific as possible in expressing your views and in the other information you provide. For example, please consider how your views or information could vary depending on specific circumstances, such as the water depth at which decommissioning takes place. Wherever possible, please provide relevant factual support for your views.
