SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering the issuance of amendments to Duke Energy for Renewed Facility Operating License Nos. DPR-38, DPR-47, and DPR-55 for the operation of Oconee Nuclear Station, Units 1, 2, and 3, respectively, located in Oconee County, South Carolina. Duke Energy submitted its License Amendment Request (LAR) No. 2018-01 by letter ONS-2018-014 dated February 12, 2018 (Duke Energy 2018a), as supplemented by letters RA-18-0112 dated August 8, 2018 (Duke Energy 2018b), and RA-18-0139 dated August 23, 2018 (Duke Energy 2018c). The licensee applied for changes to the Duke Energy Physical Security Plan under the provisions of Title 10 of the *Code of Federal Regulations* (10 CFR) Part 50, "Domestic Licensing of Production and Utilization Facilities," Section 50.90, "Application for amendment of license, construction permit, or early site permit." In accordance with section 10 CFR 51.21, the NRC prepared the following EA that analyzes the environmental impacts of the proposed licensing action. Based on the results of this EA, and in accordance with 10 CFR 51.31(a), the NRC has determined not to prepare an environmental impact statement for the proposed licensing action and is issuing a final FONSI.

II. Environmental Assessment

Description of the Proposed Action

The proposed action would revise the Duke Energy Physical Security Plan for Oconee Nuclear Station to include

additional protective measures during a specific infrequent short-term operating state, including a modification that provides additional access restriction. In its application, the licensee stated that it is voluntarily proposing these changes to further increase the margin of protection for certain associated components and equipment during certain modes of operation of the Standby Shutdown Facility.

Installation of the additional protective measure would likely include placing a floating barrier on the Keowee River. The barrier would consist of multiple segments connected by cabling and anchored by concrete abutments that are cast in place. Depending upon the final design, the concrete abutments would either sit on the ground, which would require minor clearing and grading prior to installation, or be buried in the ground, which would require excavation. Duke Energy would also need to clear and grade a limited area to build a temporary access road on the east side of the Keowee River. A temporary laydown area would be created near the access road to hold formwork, rebar, spoil, and other construction-related materials and equipment. (Duke Energy 2018b)

During construction, Duke Energy (2018b) would use a rubber tire crane that is less than 100 feet (ft) (30 meters (m)) tall when fully extended, one rubber tire front end loader, one excavator, two 10-yard dump trucks, and delivery vehicles (e.g. flatbed and concrete trucks) to complete all construction activities.

Temporarily disturbed areas from all construction activities would be less than 0.5 acre (ac) (0.2 hectare (ha)). Permanently disturbed areas associated with the abutments would be less than 0.1 ac (0.04 ha). Duke Energy would complete all construction activities within twelve weeks. Once construction is complete, the floating barrier would remain in the river, permanently attached to the abutments. (Duke Energy 2018b)

Need for the Proposed Action

Duke Energy is applying for the license amendments in accordance with 10 CFR 50.90. These amendments would further increase the margin of protection for certain associated components and equipment during certain modes of operation of the Standby Shutdown Facility.

Plant Site and Environs

Oconee Nuclear Station is located on 210 ha (510 ac) in a rural part of northwestern South Carolina. The site consists of rolling hills with several
