and ultimately assist them in the preparation of their biennial hazardous waste report. EPA requests comment on its proposal to require the reporting of form and source codes and density information, if applicable, on the manifest; these codes and density data would also be mandatory for manifest completion in e-Manifest. EPA requests comment on how the Agency should add the new data elements on the paper manifest for BR integration. Should EPA expand Item 19 of the manifest to include source code, form code, and density information, or create separate new data fields for each? Are the additions of these elements to the manifest sufficient enough to ensure that waste receipt data can be collected in the e-Manifest system and ultimately used for biennial hazardous waste reporting? If these additions are insufficient for BR integration, what other data entries must be recorded on the manifest for Biennial Reporting purposes?

EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another Federal Register notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.
