

I. Background

A number of potential hazards can exist at surface coal mines and facilities. Highwalls, mining equipment, travelways, and the handling of mining materials each present potentially hazardous conditions.

Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act) 30 U.S.C. 813(h), authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. Further Section 101(a) of the Mine Act 30 U.S.C. 811 authorizes the Secretary to develop, promulgate, and revise as may be appropriate, improved mandatory health and safety for the protection of life and prevention of injuries in coal or other mines. 30 U.S.C. 811(a).

Section 77.1713, Title 30 of the Code of Federal Regulations requires coal mine operators to conduct examinations of each active working area of surface mines, active surface installations at these mines, facilities and preparation plants not associated with underground coal mines for hazardous conditions during each shift. A report of hazardous conditions detected must be entered into a record book along with a description of any corrective actions taken. By conducting an on shift examination for hazardous conditions, mine operators can better ensure a safe working environment for the miners and a reduction in accidents.
