*Title of Collection:* Evaluation of the National Science Foundation Advanced Technological Education Program.

*OMB Number:* 3145–NEW.

*Type of Request:* Intent to seek approval to establish an information collection.

*Abstract:* The ATE program is designed to (1) produce more qualified science and engineering technicians to meet workforce demands and (2) improve the technical skills and the general science, technology, engineering, and mathematics (STEM) preparation of these technicians and the educators who teach them. The ATE program provides federal funds through four tracks: Projects, centers, small grants for institutions new to the ATE program, and targeted research on technician education. The purpose of the outcomes study is to examine the capacity of academic institutions to educate STEM technicians, the partnerships between academic institutions and industry, the academic and employment outcomes of students, and the receipt of professional development by technical educators. To that end, the new collection of data for the outcomes study is a web survey of principal investigators (PIs) designed to collect new information about these topics and is scheduled to take place from April 2019 through September 2019. The population of interest consists of projects and centers—the tracks most likely to provide direct support for technician education—that first received funding between fiscal year (FY) 2011 and 2015 and includes awards that are currently active and those that have expired.

*Use of the Information:* The primary purpose of collecting this information is program evaluation. The data collected will enable NSF to describe program components that are implemented with ATE funds and will be used by NSF to monitor and improve the program and assess its merit and worth. The evaluation will also inform the design of a future impact evaluation.

*Expected Respondents:* The expected respondents are up to 204 ATE PIs who have received ATE funding since 2007.

*Estimate of Burden:* The collection occurs once for each respondent. The total estimate for this collection is 204 burden hours and \$5,146.

Dated: May 7, 2019.
