

limit their peak radiated power to the product of the maximum permissible radiated power (in milliwatts) times their emission bandwidth divided by 100 MHz. For the purposes of this paragraph (b)(4), emission bandwidth is defined as the instantaneous frequency range occupied by a steady state radiated signal with modulation, outside which the radiated power spectral density never exceeds 6 dB below the maximum radiated power spectral density in the band, as measured with a 100 kHz resolution bandwidth spectrum analyzer. The center frequency must be stationary during the measurement interval, even if not stationary during normal operation (e.g., for frequency hopping devices).

(c) Spurious emissions shall be limited as follows:

(1) The power density of any emissions outside the band of operation, e.g., 116–123 GHz, 174.8–182 GHz, 185–190 GHz or 244–246 GHz, shall consist solely of spurious emissions.

(2) Radiated emissions below 40 GHz shall not exceed the general limits in § 15.209.

(3) Between 40 GHz and the highest frequency specified in § 15.33, the level of these emissions shall not exceed 90 pW/cm² at a distance of 3 meters.

(4) The levels of the spurious emissions shall not exceed the level of the fundamental emission.

(d) Fundamental emissions must be contained within the frequency bands specified in this section during all conditions of operation. Equipment is presumed to operate over the temperature range – 20 to + 50 degrees Celsius with an input voltage variation of 85% to 115% of rated input voltage, unless justification is presented to demonstrate otherwise.

(e) Regardless of the power density levels permitted under this section, devices operating under the provisions of this section are subject to the radiofrequency radiation exposure requirements specified in §§ 1.1307(b), 2.1091, and 2.1093 of this chapter, as appropriate. Applications for equipment authorization of devices operating under this section must contain a statement confirming compliance with these requirements for both fundamental emissions and unwanted emissions. Technical information showing the basis for this statement must be submitted to the Commission upon request.

(f) Any transmitter that has received the necessary FCC equipment authorization under the rules of this chapter may be mounted in a group installation for simultaneous operation

with one or more other transmitter(s) that have received the necessary FCC equipment authorization, without any additional equipment authorization. However, no transmitter operating under the provisions of this section may be equipped with external phase-locking inputs that permit beam-forming arrays to be realized.

(g) Measurement procedures that have been found to be acceptable to the Commission in accordance with § 2.947 of this chapter may be used to demonstrate compliance.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 64

[WC Docket No. 13–39; FCC 19–23]

Rural Call Completion

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this Fourth Report and Order, the Federal Communications Commission (Commission) completes its implementation of the Improving Rural Call Quality and Reliability Act of 2017 (RCC Act) by adopting service quality standards for intermediate providers; and an exception to those standards for intermediate providers that qualify for the covered provider safe harbor in our existing rules. We also set forth procedures to enforce our intermediate provider requirements. Moreover, we sunset the rural call completion data recording and retention requirements adopted in the *First RCC Order* one year after the effective date of the service quality standards we adopt today. Finally, we deny petitions for reconsideration of the *Second RCC Order*.

DATES: Effective July 5, 2019.

ADDRESSES: Federal Communications Commission, 445 12th Street SW, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Zach Ross, FCC Wireline Competition Bureau, Competition Policy Division, Room 5–C211, 445 12th Street SW, Washington, DC 20554, at (202) 418–1033 or Zachary.Ross@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Fourth Report and Order, in WC Docket No. 13–39, adopted and released March 15, 2019. A full text version of this document may be obtained at the following Internet Address: <https://docs.fcc.gov/public/attachments/FCC-19-23A1.pdf>.

Synopsis

I. Introduction

1. In 2019, all Americans should have confidence that when a phone call is made to them, they will receive it. Yet, that is not always the case for those living in rural or remote areas of the country. Rural call completion problems persist and they can have significant impacts on quality of life, economic opportunity, and public safety in rural communities. Additional work remains to be done to fix this vexing problem. Today, we take up that charge, furthering the Commission's ongoing efforts to ensure that calls are indeed completed to *all* American consumers and continuing our implementation of the Improving Rural Call Quality and Reliability Act of 2017 (RCC Act). Specifically, based on the record before us, we adopt service quality standards for intermediate providers that complement the rules we have already established for covered providers. We also sunset our remaining call data recording and retention rules one year after the service quality standards adopted today become effective.

II. Background

2. Prior to 2018, the Commission relied on data recording, retention, and reporting rules to address rural call completion issues. These rules, adopted in the 2013 *First RCC Order*, 78 FR 76218, were intended to improve the Commission's ability to monitor the delivery of long-distance calls to rural areas and aid enforcement action with respect to providers' call completion practices. Under these rules, "covered providers"—entities that select the initial long-distance route for a large number of lines—are required to record and retain, for six months, specific information about each call attempt to a rural operating company number (OCN) from subscriber lines for which the providers make the initial long-distance call path choice. In addition, the *First RCC Order* required covered providers to file quarterly reports with the Commission containing aggregated information.

3. In the April 2018 *Second RCC Order*, 83 FR 21723, the Commission reoriented its existing rural call completion rules to better reflect strategies that have worked to reduce rural call completion problems while at the same time reducing the overall burden of the rules on providers. First, the Commission adopted a new rule requiring covered providers to monitor

the performance of the “intermediate providers” to which they hand off calls. The Commission held that the monitoring rule entails both prospective monitoring of intermediate provider performance to prevent problems and retrospective investigation of any problems that arise. At the same time, the Commission gave covered providers flexibility in determining the monitoring practices best suited to their individual networks and declined to mandate compliance with specific standards or best practices as part of the monitoring requirement.

4. Second, the Commission eliminated the rural call completion data reporting requirement for covered providers that was established in the *First RCC Order*. It concluded that the reporting rule was burdensome on covered providers while the resulting reports were of limited utility in discovering the source of rural call completion problems and a pathway to their resolution. The Commission further concluded that the covered provider monitoring rule would be more effective than the reporting requirement because it imposed a direct, substantive obligation.

5. On February 26, 2018, the RCC Act was signed into law. It directs the Commission to establish an intermediate provider registry, and stipulates that (1) certain intermediate providers must register with the Commission, and (2) covered providers may only use registered intermediate providers to transmit covered voice communications. In addition, the RCC Act directs the Commission to establish service quality standards for the transmission of covered voice communications by intermediate providers, and requires intermediate providers to comply with such standards.

6. In the April 2018 *Third RCC FNPRM*, 83 FR 21983, the Commission sought comment on how best to implement the RCC Act and craft service quality rules for intermediate providers in a way that would “ensure the integrity of the transmission of covered voice communications to all customers in the United States” without imposing unnecessary burdens on providers. After noting that “proposals that rely on or are consistent with industry best practices” are often less burdensome than other potential approaches, the *Third RCC FNPRM* proposed “to require intermediate providers to take reasonable steps to: (1) Prevent ‘call looping,’ a practice in which the intermediate provider hands off a call for completion to a provider that has previously handed off the call;

(2) ‘crank back’ or release a call back to the originating carrier, rather than simply dropping the call, upon failure to find a route; and (3) not process calls so as to ‘terminate and re-originate’ them (e.g., fraudulently using “SIM boxes” or unlimited VoIP plans to re-originate large amounts of traffic in an attempt to shift the cost of terminating these calls from the originating provider to the wireless or wireline provider).” These proposed standards were based on industry best practices developed by the Alliance for Telecommunications Industry Solutions (ATIS) and set forth in its Intercarrier Call Completion/Call Termination Handbook (ATIS RCC Handbook).

7. In the *Third RCC FNPRM*, the Commission also sought comment on alternative proposals for intermediate provider service quality standards, including whether “to pursue ‘the more general adoption of duties to complete calls analogous to those that already apply to covered providers under prior Commission rules and orders.’” The Commission further sought comment on whether to eliminate or sunset the rural call completion data recording and retention requirements established in 2013.

8. In the August 2018 *Third RCC Order*, 83 FR 47296, the Commission began its implementation of the RCC Act by codifying rules mandating registration of all intermediate providers and requiring that covered providers use only registered intermediate providers. Specifically, the *Third RCC Order* required that intermediate providers submit certain information to the Commission via a publicly available intermediate provider registry. The registration requirement applies to “any intermediate provider that offers or holds itself out as offering the capability to transmit covered voice communications from one destination to another.” The Commission set the registration deadline at “30 days after a Public Notice announcing the approval by the Office of Management and Budget of the rules establishing the registry,” with any subsequent information updates made within 10 business days of a change.

9. The *Third RCC Order* also implemented the RCC Act’s prohibition against the use of unregistered intermediate providers by any covered provider in the path of a given call. Covered providers have “a reasonable period of time, but no more than 45 days in which to adjust their call routing practices to avoid use of an unregistered intermediate provider after gaining knowledge of its deregistration or lack of registration.”

III. Discussion

A. Service Quality Standards for Intermediate Providers

10. As the RCC Act mandates, we adopt service quality standards for intermediate providers. *First*, we impose on intermediate providers a general duty to complete calls. Specifically, we require intermediate providers to take steps reasonably calculated to ensure that any calls they handle are in fact completed. If an intermediate provider knows, or should know, that calls are not being completed to certain areas, the intermediate provider may be in violation of this general duty if it engages in acts or omissions that allow or effectively allow these conditions to persist. *Second*, when routing traffic destined for rural areas, intermediate providers must actively monitor the performance of any directly contracted downstream intermediate provider and, based on the results of such monitoring, take steps to address any identified performance issues with that provider. *Third*, intermediate providers must ensure that any additional intermediate providers to which they hand off calls are registered with the Commission. As was true for our monitoring obligations for covered providers, the service quality standards described in this section will go into effect six months from the date that this Order is released by the Commission, or 30 days after publication of a summary of this Order in the **Federal Register**, whichever is later. This phase-in period is intended to allow intermediate providers sufficient time to conduct any contractual negotiations necessary to come into compliance with our rules, and for the Commission’s intermediate provider registry obligations to become effective.

11. The service quality standards we adopt in this Order further the Commission’s efforts to ensure that all calls to rural areas are completed and they further Congress’s explicit purpose in passing the RCC Act: To “ensure the integrity of the transmission of covered voice communications to all customers in the United States” and “prevent unjust or unreasonable discrimination among areas of the United States in the delivery of covered voice communications.” By requiring intermediate providers to take steps reasonably calculated to ensure that all calls reach their intended destination, these service quality standards prevent intermediate providers from routing calls in a manner that results in persistent call completion problems. Where intermediate providers know, or should know, of a call completion issue,

they must now act to address it. This rule establishes a minimum, baseline standard that will “ensure the integrity of the transmission of covered voice communications to all customers in the United States.” Our rules also recognize and address longstanding issues with call completion to rural areas. The requirement that intermediate providers take affirmative steps to monitor their performance when directing traffic to rural areas—and act to resolve these problems—is designed to “prevent unjust or unreasonable discrimination among areas of the United States in the delivery of covered voice communications,” as Congress has directed.

12. As discussed above, the RCC Act charges the Commission with the duty to promulgate rules to “ensure the integrity of the transmission of covered voice communications to all customers in the United States.” To ensure that the intermediate provider service quality requirements are meeting this charge and serving their intended purpose, we direct the Wireline Competition Bureau to seek comment, one year from the effective date of the intermediate provider service quality standards we adopt today, on the effectiveness of those standards in preventing intermediate providers, both those that also operate as covered providers and those that do not, from engaging in behavior that leads to call completion problems and on whether the rural call completion problems that these rules were intended to address have improved or changed.

1. Flexible Standards for Intermediate Providers

13. Based on the record in this proceeding, we decline to mandate compliance with the three ATIS best practices as proposed in the *Third RCC FNPRM*, and instead adopt a set of flexible standards for intermediate providers based on our existing rules for covered providers. This approach is well supported by the record, and by the legislative history of the RCC Act. The Senate Commerce Committee Report accompanying the RCC Act specifies that in adopting service quality standards, the Commission may apply the “more general adoption of duties to complete calls analogous to those that already apply to covered providers under prior Commission rules and orders.” The service quality standards for intermediate providers that we adopt today parallel the standards already applicable to covered providers under the *Second RCC Order* and earlier Commission orders and rulings, ensuring that our rules will effectively

address rural call completion issues while also avoiding unnecessary compliance burdens on intermediate providers—particularly those that serve dual roles as both covered and intermediate providers.

14. We agree with commenters who argue that mandating compliance with the three ATIS best practices may be impractical or unduly burdensome for some intermediate providers, particularly those relying on older network technologies to provide service. Due to the differences among providers and their underlying networks, adoption of the ATIS best practices as the service quality standards applicable to all intermediate providers might impose unnecessary costs on some intermediate providers. As Verizon observes, “[s]ome providers may find certain [ATIS] best practices useful, while others may prefer different best practices based on their particular networks, technologies, and call patterns. Requiring intermediate providers to implement the best practices outlined in the *Third RCC FNPRM* would reduce the flexibility providers need to manage their networks.” In addition, because the ATIS best practices are meant to be dynamic and responsive to technological and industry developments, imposing those as mandatory rules could hinder the evolution of these and similar industry best practices. As the Commission found in the *Second RCC Order* with respect to its rural call completion rules for covered providers, requiring compliance with ATIS best practices “could have a chilling effect on future industry cooperation to develop solutions to industry problems.” As USTelecom observes, these same concerns are relevant to our efforts to craft service quality standards for intermediate providers.

15. We also agree with commenters who argue that we should adopt a flexible regulatory approach to intermediate provider service quality standards, and that we should seek to align our service quality standards for intermediate providers with those call completion rules that already apply to covered providers. As ATIS notes, “many providers are both ‘covered providers’ and ‘intermediate providers,’ changing roles on a call to call basis.” USTelecom further submits that “these entities generally utilize the same network facilities, the same business processes, and the same vendors to process calls” regardless of whether they operate as a covered provider or intermediate provider, and that each category of provider has the same fundamental obligation to ensure that

calls traversing their networks are completed. We have found that the monitoring rule applicable to covered providers “encourages covered providers to ensure that calls are completed, assigns clear responsibility for call completion issues, and enhances our ability to take enforcement action where needed to address persistent problems.” Moreover, we agree with commenters that application of a similar approach to intermediate providers should provide similar benefits and avoid unnecessary costs. For these reasons, the rules we adopt today for intermediate providers closely parallel those that currently apply to covered providers.

16. We therefore reject the arguments from several commenters urging adoption of the Commission’s proposal to require compliance with the three ATIS best practices listed in the *Third RCC FNPRM* rather than allowing for more flexibility. These commenters generally argue that the best practices provide an appropriate regulatory framework because they have been designed by a broad cross section of industry stakeholders to effectively address call completion issues and are widely known and utilized in the industry. NTCA, for example, argues that “[i]ndustry defined best practices such as those identified by ATIS establish an appropriate base-line standard” by which to evaluate intermediate providers’ call completion efforts. Although we agree with these observations as a general matter, after carefully considering the record, we conclude that any benefits associated with the adoption of the ATIS best practices framework proposed in the *Third RCC FNPRM* are likely outweighed by the compliance burdens associated with this approach. NTCA argues that the ATIS best practices are “the most proven measure thus far to accomplish the goal of minimizing . . . rural call completion problems.” However, while the ATIS best practices may be a useful guide to addressing call completion issues, they may not be appropriate for all networks or providers, and mandating compliance with the proposed best practices may create unnecessary compliance burdens for providers that serve as both covered providers and intermediate providers.

17. In addition to the shortcomings discussed above, the adoption of the proposed ATIS best practices framework could raise other practical issues that might limit its utility. For example, West Telecom, while supporting the use of the ATIS best practices as a general regulatory framework in lieu of “Commission micro-management,”

notes that “the ATIS RCC Handbook may not necessarily reflect [the] best approaches to resolving certain situations” and that “the Commission should continue to decline to mandate strict compliance with the ATIS RCC Handbook or other industry standards in all situations.” Similarly, ANI generally supports the Commission’s proposed framework based on the ATIS best practices but also “urges the Commission not to impose more complex service quality standards, which may not be appropriate for all intermediate providers and could unnecessarily restrict carriers’ flexibility to determine the standards best suited to their individual networks.” Additionally, ANI and West Telecom both point out potential issues related to our adoption of a “crank back” requirement. Furthermore, at least one rural intermediate provider has argued that its legacy infrastructure precludes compliance with the proposed ATIS best practices framework as a technical matter.

18. Notwithstanding these issues, we agree with commenters that the ATIS best practices provide an effective roadmap for mitigating call completion issues, and we reaffirm our finding in the *Second RCC Order* that the Commission should encourage providers to adopt these practices, while being mindful that the ATIS best practices may not be appropriate for all providers. For this reason, as is true of our monitoring rule for covered providers, we will treat compliance with the ATIS best practices, as specified in the 2015 ATIS RCC Handbook, as a safe harbor demonstrating compliance with our service quality standards for intermediate providers, including the general duty to deliver covered voice communications and the intermediate provider monitoring requirements discussed below. Consistent with our approach to covered providers in the *Second RCC Order*, we will also take the ATIS RCC Handbook best practices into account when evaluating whether an intermediate provider has established an effective monitoring regime for evaluating its performance in delivering calls to rural areas. As discussed above, however, we recognize that the ATIS best practices may not be appropriate for all providers and all network configurations, and our evaluation of an intermediate provider’s monitoring regime will necessarily reflect these considerations. We find, as we did in the *Second RCC Order*, that this approach will “encourage adherence to the best practices while giving . . .

providers flexibility to tailor their practices to their particular networks and business arrangements.”

2. Intermediate Providers Must Take Steps Reasonably Calculated To Ensure That All Covered Voice Communications Traversing Their Networks Are Delivered to Their Destination

19. Building on the regulatory approach for ensuring rural call completion that we have previously applied to covered providers, in this Order we require intermediate providers to take steps reasonably calculated to ensure that all covered voice communications that traverse their networks are delivered to their destinations. An intermediate provider may violate this general duty to complete calls if it knows, or should know, that calls are not being completed to certain areas, and it engages in acts or omissions that allow or effectively allow these conditions to persist.

20. As is true for covered providers under the *2012 Declaratory Ruling* and *Second RCC Order*, under this rule intermediate providers must promptly resolve any anomalies or problems that arise preventing call completion, and take action to ensure they do not recur. If an intermediate provider determines that responsibility for a call completion problem lies with a party other than the provider itself or any of its downstream providers, the provider must use commercially reasonable efforts to alert that party to the anomaly or problem. Willful ignorance will not excuse a failure by an intermediate provider to investigate evidence of poor performance. Evidence of poor performance includes, among other indicators, “persistent low answer or completion rates; unexplained anomalies in performance reflected in the metrics used by the [intermediate] provider; repeated complaints to the Commission, state regulatory agencies, or [intermediate] providers by customers, rural incumbent LECs and their customers, competitive LECs, and others.”

21. We note that nothing in this rule should be construed to dictate how intermediate providers must route their traffic, nor does the general duty to deliver covered voice communications impose strict liability upon intermediate providers who fail to complete calls. As we specified in the context of our monitoring rule for covered providers, “[w]e do not impose strict liability on . . . providers for a call completion failure; rather, we may impose a penalty where a . . . provider fails to take actions to prevent reasonably

foreseeable problems or, if it knows or should know that a problem has arisen, where it fails to investigate or take appropriate remedial action.” Similarly, the rules we adopt today for intermediate providers focus on addressing persistent call completion issues; thus, strict liability under our service quality rules for isolated call failures is not contemplated. Rather, we require all intermediate providers to take steps reasonably calculated to ensure that covered voice communications reach their destination, utilizing the tools available to each provider, recognizing that these tools may vary depending on the size of the provider, their network configuration, and other variables.

22. As we found in the *Third RCC Order*, the provisions of the RCC Act are not limited to rural areas; therefore, we apply the general duty discussed above to all covered voice communications, regardless of their destination. This rule directly addresses Congress’s instruction to adopt rules to “ensure the integrity of the transmission of covered voice communications to *all* customers in the United States[.]” Our approach also aligns the obligations of intermediate providers with those applicable to covered providers pursuant to the *2012 Declaratory Ruling* and the *Second RCC Order*, which require a covered provider “that knows or should know that it is providing degraded service to certain areas” to take action to correct the problem and “ensure that intermediate providers, least-cost routers, or other entities acting for or employed by the carrier are performing adequately.”

3. Intermediate Providers Must Monitor the Performance of any Directly Contracted Intermediate Providers When Routing Traffic to Rural Areas

23. In addition to the general duty to deliver all covered voice communications, we adopt the *Third RCC FNPRM* proposal to require that intermediate providers establish processes to monitor their rural call completion performance. Therefore, when transmitting covered voice communications to rural areas, intermediate providers must: (a) Monitor the performance of each intermediate provider with which it contracts; and (b) based on the results of such monitoring, take steps that are reasonably calculated to correct any identified performance problem with the intermediate provider, including removing that provider for sustained poor performance.

24. These requirements parallel the monitoring obligations the Commission

adopted for covered providers in the *Second RCC Order*, and are broadly supported by the record in this proceeding. We agree with arguments advanced by ITTA and several other commenters that “the Commission should model this self-monitoring rule on the monitoring rule for covered providers.”

25. As was true of our covered provider monitoring requirements, the rural call completion performance monitoring obligation “entails both prospective evaluation to prevent problems and retrospective investigation of any problems that arise.” Prospective monitoring “includes regular observation of intermediate provider performance and call routing decision-making; periodic evaluation to determine whether to make changes to improve rural call completion performance; and actions to promote improved call completion performance where warranted.” Retrospective monitoring requires intermediate providers to take steps reasonably calculated to correct any identified performance problems. Where intermediate providers detect persistent problems routing covered voice traffic to rural areas, we require intermediate providers to develop a solution that is reasonably calculated to be effective, and specifically require intermediate providers to remove a contracted intermediate provider from a route after sustained inadequate performance, except in situations where an intermediate provider can demonstrate that no alternative routes exist. Intermediate providers that do not effectively correct problems with delivery of covered voice communications to rural areas may be subject to enforcement action for violations of our service quality standards, including the general duty to deliver covered voice traffic to its destination and the monitoring requirement. Together, these rules satisfy Congress’s direction to the Commission to “ensure the integrity of the transmission of covered voice communications to all customers in the United States” and “prevent unjust or unreasonable discrimination among areas of the United States in the delivery of covered voice communications.”

4. Intermediate Providers Must Ensure That Any Intermediate Providers to Which They Hand Off Calls Are Registered

26. We also require intermediate providers to ensure that any additional intermediate providers to which they hand off calls are registered with the Commission pursuant to § 64.2115 of

the Commission’s rules. As is true of the general duty to complete calls and the rural call completion performance monitoring obligations discussed above, we adopt this rule pursuant to the authority granted to the Commission by Congress in the RCC Act, which directs us to develop service quality standards for intermediate providers. The RCC Act requires that all intermediate providers register with the Commission and prohibits covered providers from using any unregistered intermediate providers. We find that extending this prohibition to intermediate providers as well will further the aims of the RCC Act by making all participants in the call path responsible for ensuring the registration of any subsequent intermediate providers. We also note that the RCC Act expressly requires the rules we promulgate pursuant to the statute to ensure the integrity of the transmission of covered voice communications “to all customers in the United States” and to “prevent unjust or unreasonable discrimination among areas of the United States” in the delivery of such communications. Accordingly, we clarify that the registry requirements in § 64.2115 as well as the intermediate service quality standards we adopt today do not apply to non-U.S. intermediate providers on calls terminating outside of the United States. This requirement aligns with the prohibition on covered provider use of unregistered intermediate providers pursuant to the RCC Act and § 64.2117 of the Commission’s rules, and will promote compliance with the registry provisions of the RCC Act by making intermediate providers jointly responsible for ensuring the registration status of directly contracted downstream intermediate providers in their call path.

27. The RCC Act requires that all intermediate providers must maintain a registration with the Commission in order to transmit covered voice communications, and the *Third RCC Order* requires covered providers to use contractual restrictions designed to ensure the registration status of any downstream intermediate providers in the call path. And, pursuant to the RCC Act and the *Third RCC Order*, information concerning the registration status of intermediate providers will be readily available on the Commission’s website. For these reasons, we expect the burdens associated with this requirement to be minimal.

28. In order to further reduce the compliance burdens associated with this rule, we decline to require intermediate providers to submit a certification to the Commission stating

that they do not transmit covered voice communications to other unregistered intermediate providers. As we noted with respect to the monitoring rule for covered providers, “[w]e expect all entities subject to our rules to comply at all times,” and we decline to impose a certification requirement absent a clear public interest benefit. Although some parties believe a certification, for example on an annual basis, is useful to ensure intermediate providers are taking reasonable steps to comply with Commission requirements, we find consistent with other commenters that the RCC Act and Commission rules provide sufficient methods to monitor and enforce non-compliance. For example, as discussed below, the Commission has authority to take enforcement actions against covered and intermediate providers that are not registered such as forfeitures and deregistration. We therefore decline to require intermediate providers to certify that they do not transmit covered voice communications to other intermediate providers that are not registered with the Commission. Nor do we require intermediate providers to take responsibility for ensuring the registration status of downstream intermediate providers with which they do not share a direct relationship, as we do for covered providers. Compared with covered providers, which must exceed a minimum size threshold and determine the initial long-distance path of a call, intermediate providers may have less ability to modify call routing paths. And, because each intermediate provider in the path of a given call is responsible for determining the registration of any other intermediate provider to which it hands off calls, we find that such a requirement would be duplicative and, thus, unnecessary.

5. Other Issues

29. *Additional Rules to Prevent Ring Signaling Manipulation.* We decline to adopt any additional rules to prevent intermediate providers from manipulating signaling information for calls destined for rural areas. As supported in the record, our existing rules already require intermediate providers to pass and return unaltered signaling information, and we conclude that additional rules are unnecessary. Moreover, a covered provider is also responsible when a downstream intermediate provider unlawfully generates ring signaling on a call. Although NTCA supports prohibiting intermediate providers from manipulating signaling information, it does not recommend additional rules. Because these waiver petitions involve

the technical signaling capabilities of the various carriers, we conclude that these petitions are outside the scope of this rulemaking, and therefore, decline to address them as part of this Order. We note that § 64.1601(a)(2) of our rules makes clear that intermediate carriers are already mandated to faithfully relay signaling. As such, we decline to impose additional regulation.

30. *Limitation of number of intermediate providers.* We also decline to require intermediate providers to limit the number of subsequent intermediate providers in the call chain. Although Inteliquent supports a limitation and requests the Commission to limit the number of intermediate providers in the call path to no more than three, the majority of commenters reject this proposal. We agree with West Telecom that the number of intermediate providers is not “an appropriate proxy to identify specific intermediate providers or routing practices that interfere with RCC.” We do not agree with Inteliquent that, in all cases, limiting the number of intermediate providers will encourage efficient network architecture and thus improve call completion rates. The Commission remains concerned that specific limitations on the number of intermediate providers “conflate[] the number of ‘hops’ with good hops . . . [by assuming] that a small number of badly performing intermediate providers are better than multiple well-performing intermediate providers.” Instead, we believe that providers should have flexibility to meet the requirements the Commission has in place. Consistent with our treatment of covered providers, although we decline to *mandate* a specific limit on the number of intermediate providers in the call chain, we believe the service quality standards adopted herein will encourage intermediate providers to limit other providers in the chain.

31. *Numeric performance thresholds.* In an effort to consider alternative service quality standards, we sought comment on whether the Commission should require intermediate providers to meet or exceed one or more numeric rural call completion performance targets. Consistent with the majority of comments, we decline to set specific numeric thresholds, but rather allow intermediate providers flexibility to self-monitor rural call completion performance. We therefore decline to adopt Inteliquent’s proposal for performance targets on a weekly and LATA/OCN basis. We agree, as described by Georgetown University, that while evaluation of these and other metrics over time is a valuable tool to

ensure call completion, specific performance targets are not useful. Nonetheless, we expect intermediate providers to monitor their networks and downstream providers with sufficient specificity to adequately evaluate their performance. We recognize that intermediate providers handle calls on a variety of networks and agree with most commenters that a reasonable self-monitoring process—consistent with monitoring processes for covered providers and contemplated by the Senate Commerce Committee Report—will sufficiently monitor downstream providers and allow correction.

32. *Modification of Rules Adopted in the Second RCC Order.* We also decline to make any modifications to rules adopted in the *Second RCC Order*. As discussed in more detail below in rejecting USTelecom’s Petition for Reconsideration, we reaffirm the Commission’s findings in the *Second RCC Order* that the monitoring rule is necessary to address ongoing rural call completion issues, and is supported by the record in this proceeding and the regulatory regime established by Congress in the RCC Act. We disagree with ITTA that the Commission should “abandon the covered provider monitoring requirements altogether, or at least curtail them substantially.” We further disagree with NCTA that covered providers should only be responsible for conduct directly within their control. Rather, we again reject any “all-or-nothing” approach to the monitoring rule and reaffirm that our balanced approach provides for responsibility for rural call completion without imposing an unduly rigid or burdensome mandate.

B. Exception To Service Quality Standards for Safe Harbor Covered Providers

33. The RCC Act provides that the service quality standards established by the Commission pursuant to the RCC Act “shall not apply to a covered provider” that has certified as a safe harbor provider under § 64.2107(a) on or before February 26, 2019 (which is one year after the enactment of the RCC Act) and that continues to maintain eligibility for the safe harbor. To implement this provision of the RCC Act, we adopt an exception to the service quality standards described above for intermediate providers that qualify for our covered provider safe harbor established in new § 64.2109 of the Commission’s rules, similar to the Commission’s existing § 64.2107 safe harbor from the rural call completion recording and retention requirements.

34. As the Commission proposed in the *Third RCC FNPRM*, we maintain the three safe harbor requirements as currently provided in our existing rules. Therefore, in order to qualify for the exemption from the intermediate provider service quality standards established by the RCC Act, covered providers must satisfy three requirements: (1) The covered provider must restrict by contract any intermediate provider to which a call is directed from permitting more than one additional intermediate provider in the call path before the call reaches the terminating provider or terminating tandem; (2) any nondisclosure agreement with an intermediate provider must permit the covered provider to reveal the identity of the intermediate provider and any additional intermediate provider to the Commission and to the rural incumbent LEC(s) whose incoming long-distance calls are affected by the intermediate provider’s performance; and (3) the covered provider must have a process in place to monitor the performance of its intermediate providers.

35. We note that the service quality standards we adopt today under the RCC Act apply only to intermediate providers; however, the exemption established by the RCC Act is, like the safe harbor in our existing rules, limited to covered providers. We note that we did not receive comments about this disparity. We therefore clarify that covered providers qualifying for our safe harbor on or before February 26, 2019 will be exempt from our service quality standards when serving as intermediate providers, provided they maintain their safe harbor certification with the Commission.

C. Enforcement of Intermediate Provider Requirements

36. In the *Third RCC Order*, the Commission required intermediate providers that offer to transmit covered voice communications to register with the Commission, pursuant to subsection (a)(1) of the RCC Act. The Commission determined that because the RCC Act intends the registry to function as a qualification for providers to enter the intermediate provider market, the requirement to register (as well as to maintain registration in good standing) is tantamount to a license. The Commission concluded that it may exercise its forfeiture authority against intermediate providers that fail to register without first issuing a citation.

37. Under subsection (a)(2) of the RCC Act, once the service quality standards we adopt here take effect, registered intermediate providers, and providers

that subsequently seek registration with the Commission, must comply with these standards. Accordingly, as supported by a number of commenters, we conclude that we may deregister intermediate providers from the registry as an enforcement option. As in the case of intermediate providers that fail to register with the Commission, we also may exercise our forfeiture authority against intermediate providers that fail to comply with the service quality standards, and, as explained in the *Third RCC Order*, we may do so without first issuing a citation. In such cases, as in all forfeiture matters, the Commission will consider the nature, circumstances, extent and gravity of the violation, and with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require. 47 U.S.C. 503(b)(2)(E). Our choice of enforcement remedy will depend upon the totality of circumstances, and we may impose penalties for both single infractions and patterns of non-compliance or misconduct. Requiring repeated violations before allowing enforcement action, as some commenters propose, could result in, if not indirectly encourage, systemic call completion issues—an outcome that would frustrate the underlying purpose of the RCC Act.

38. When the Commission seeks to remove an intermediate provider from the registry, the procedures specified in Section 558 of the Administrative Procedure Act apply. Except in cases of willfulness or where public health, interest, or safety requires otherwise, deregistration may occur after the intermediate provider has been given written notice of the facts or conduct at issue and an opportunity to demonstrate or achieve compliance with the service quality standards. Such notice will take the form of a publicly issued order to show cause. Intermediate providers that do not present a response with written evidence of their compliance with the requirements identified in the notice for this reason, we find it unnecessary to establish a separate requirement that intermediate providers “maintain records of how they are complying” with the service quality standards, as NTCA suggests or a detailed plan on how they intend to achieve compliance within thirty days will be removed from the registry. A hearing will not be required unless the intermediate provider’s response presents a substantial and material question of fact. In any case where a hearing proceeding is conducted, the hearing shall be based on written evidence only. Deregistration orders will be subject to judicial review

under Section 402(a) of the Communications Act. We note that, if a proceeding results in deregistration, the order to show cause will afford affected covered providers ample notice to explore alternative arrangements, in order to migrate their traffic to other, compliant, intermediate providers if necessary.

39. Moreover, a covered provider that becomes aware that an intermediate provider it uses is violating the service quality standards may also be subject to enforcement action, even if the intermediate provider is properly registered. Because covered providers must know or be capable of knowing the identity of all intermediate providers in the path of a given call, monitor the performance of their intermediate providers in completing calls to rural destinations, and take steps to correct performance problems, when a provider learns that its intermediate provider is violating service quality standards, it is responsible for removing that provider from all affected call paths until the provider demonstrates compliance. A failure to do so may result in enforcement action.

D. One-Year Sunset of Recording and Retention Rules

40. We sunset the rural call completion data recording and retention requirements established in the *First RCC Order* one year after the effective date of the service quality standards adopted here today. Based upon the record developed since those requirements’ adoption in 2013, and the analysis the Wireline Competition Bureau (Bureau) developed in the 2017 RCC Data Report, we find that the few, if any, benefits the call data offers do not outweigh the burden presented by having covered providers collect and retain data that is not useful in monitoring or remedying call completion issues.

41. The call data recording, retention, and reporting requirements were intended to improve the Commission’s ability to monitor rural call completion, and to aid enforcement action when necessary. These requirements, instituted by the 2013 *First RCC Order*, apply to covered providers for calls signaled as Answered, Busy, Ring No Answer, and Unassigned. The Commission declined to then adopt a specific sunset date for data recording, retention, and reporting, but directed the Bureau to produce a report, analyzing covered provider call data “submitted during the first two years of the data collection’s effectiveness” and committed to complete a proceeding reevaluating “whether to keep,

eliminate, or amend the data collection and reporting rules three years after they become effective.”

42. The Bureau recommended in its resulting 2017 RCC Data Report that the Commission consider eliminating the recording, retention, and reporting rules. The Bureau reached this recommendation after finding significant data reliability issues—including inconsistent covered provider categorization methodologies for the four call types, and failure by some covered providers to exclude autodialer, wholesale, and intermediate provider traffic because of technical inabilities to do so. The RCC Data Report noted that even if the Commission were to modify the recording, retention, and reporting requirements, “it is not clear that that the benefits of such modifications would outweigh the costs.” In the *Second RCC Order*, the Commission instituted the Bureau’s recommendation in part by eliminating the reporting, but keeping the recording and retention requirements. Having received significant comments in favor of eliminating all three requirements pursuant to the *Second RCC FNPRM*, 82 FR 34911, the *Third RCC FNPRM* sought further comment on the elimination or sunset of the recording and retention rules upon implementation of the RCC Act. The Commission also asked whether it should instead “sunset the rules at a different point in time” or “instead retain the recording and retention rules without any sunset.”

43. We sunset the recording and retention rules as the burden of continuing to mandate that covered providers collect and retain data, especially as prescribed by those rules, outweighs any benefit or usefulness of the data. We agree with USTelecom that it makes “little sense for the Commission to continue to require providers to record and retain data that neither the Commission nor the carriers use, or find useful for analysis of, rural call completion issues.” For the same reason, we disagree with NTCA’s argument that “the Commission should retain the record keeping requirement for covered providers until such time as there is an affirmative determination that the rules are effective and records are no longer necessary.” Because the data as prescribed by the *First RCC Order* is not useful to covered providers in alleviating rural call completion issues, our recording and retention rules have placed covered providers in the position of maintaining one pre-packaged set of data for rural call completion rule compliance only and possibly retaining another data set *actually* used by covered providers in

operating their networks and remedying call completion issues via the covered provider monitoring rule. We expect covered providers to dedicate all available resources to prevent and remedy call completion issues; and, therefore, it is unnecessary for us to require covered providers to produce data unused in meeting these purposes.

44. We disagree with NTCA that maintaining the recording and retention rules will inform us of the efficiency of the monitoring requirements, intermediate provider service quality standards, and intermediate provider registry. Because the monitoring rule permits covered providers “flexibility in determining and conducting prospective monitoring that is appropriate for their respective networks and mixes of traffic,” mandating specific data collection metrics would stifle this flexibility, and would in practice, prescribe monitoring practices.

45. We also disagree with NTCA’s argument that eliminating the recording and retention rules “may lead to an increase in the number of intermediate providers being used in the call path for providers who now have a good record of completing calls.” We find it unlikely that covered providers with a good track record of completing calls would suddenly assume bad call completion practices, and risk violating the Commission’s call completion rules, as a result of the removal of the recording and retention requirements. Nor does NTCA point to any evidence suggesting such an outcome. For these same reasons, we disagree with NTCA’s assertion that removal of the recording and retention rules will reduce the appeal of the safe harbor for covered providers and thereby lead to diminished rural call completion performance by safe harbor covered providers. Moreover, as we stated above and in the *Second RCC Order*, we believe that our intermediate provider service quality standards, the intermediate provider registry requirement, and the covered provider monitoring requirement will limit the number of providers in call paths.

46. The *Third RCC FNPRM* did not propose a sunset timeline for the recording and retention requirements, but suggested a period “such as three years” from the *Second RCC Order*. Commenters in this proceeding have advocated that the recording and retention rules be eliminated upon effectiveness of our RCC Act implementing regulations, or upon adoption of the service quality standards. Despite the data quality issues discussed above, we find that immediate removal of the recording and

retention rules could impact our ability to address rural call completion issues pending full implementation of the RCC Act requirements. We therefore find that a one-year sunset of the recording and retention rules will serve as a sufficient bridge between the Commission’s previous recording and retention rules and the RCC Act regulations.

47. This sunset period will allow covered and intermediate providers to come into full compliance with the rural call completion rules adopted pursuant to the RCC Act before the recording and retention requirements are removed. The *Third RCC Order* mandates that intermediate providers register “within 30 days after publication of a Public Notice announcing the approval by the Office of Management and Budget of the final rules establishing the registry,” and covered providers have 90 days thereafter to only use registered intermediate providers. And as discussed above, we grant intermediate providers a period of six months from the date that this Order is released by the Commission, or 30 days after publication of a summary of this Order in the **Federal Register**, whichever is later, to comply with our service quality standards. We therefore believe a one-year sunset period for the remaining recording and retention rules will provide a sufficient overlap between the new call completion rules and the Commission’s previous data collection regime.

48. The recording and retention safe harbor will also thus remain concurrently, without change, until the recording and retention requirements expire one year after the service quality standards are in effect. Accordingly, we sunset the remaining call data recording and retention requirements established in the *First RCC Order* one year after the effective date of the intermediate provider service quality standards. We also extend the application of the safe harbor to our newly adopted service quality standards for intermediate providers.

E. Petitions for Reconsideration of Second RCC Order

1. NTCA Petition for Reconsideration

49. On June 11, 2018, NTCA filed a Petition for Reconsideration (Petition) of a portion of the *Second RCC Order*, requesting “that the Commission reevaluate and reconsider its decision to not require covered providers to file their documented rural call completion monitoring procedures with the Commission.” For the reasons listed below, we deny NTCA’s Petition.

a. Background

50. In the *Second RCC Order*, the Commission instituted a covered provider monitoring requirement. This monitoring requirement, which became effective October 17, 2018, requires covered providers to prospectively and retrospectively monitor their contracted intermediate providers, and to document those monitoring processes, “to ensure consistent prospective monitoring and facilitate Commission oversight.” The Commission declined to require covered providers to file or publish this monitoring process documentation, due to concerns about revealing “important technical, personnel, and commercial details about the covered provider’s network and business operations,” and a corresponding lack of any “countervailing benefit to warrant imposing” such a burden. In addition to this Petition, NTCA previously submitted two near-identical *ex parte* presentations in April 2018. The two *ex partes*, identical in facts and argument to its Petition, requested “that the Commission require covered providers to file with the Commission their documented monitoring procedures,” as filing of procedures imposes “no meaningful burden on covered providers, while offering greater transparency and certainty.”

b. Discussion

51. Our rules allow interested persons to file petitions for reconsideration of final actions in rulemaking proceedings, and provides that petitions for reconsideration relying on “facts or arguments which have not previously been presented to the Commission will be granted” only under certain circumstances. Where the petition presents no new facts or arguments, the Commission has full discretion to grant such petitions in “whole or in part or may deny or dismiss the petition.”

52. Although we agree that NTCA is an interested party to a final action, the Commission has already considered and rejected NTCA’s arguments, and NTCA presents no new facts or arguments to explain why the Commission should reconsider its decision on covered provider monitoring documentation. As Sprint points out, NTCA’s Petition is a near verbatim restatement of the facts and arguments NTCA submitted in its two April 2018 *ex parte* filings that transparency and certainty compel the Commission to mandate that covered providers file their monitoring processes with the Commission. Accordingly, because NTCA does not submit new facts or arguments, we have full

discretion to grant or deny its Petition in whole or in part.

53. Under such discretionary authority, we deny the Petition. Beyond its editorialization of our decisions, NTCA does not present new arguments or facts warranting a discretionary change in the Commission's decision to not require covered providers to file or publish their monitoring processes. NTCA specifically challenges the Commission's "conclusion" of expecting covered providers to document their monitoring procedures without requiring covered providers to file those procedures with the Commission "or otherwise make them publicly available." The Commission indeed specifically and fully addressed NTCA's identical argument in the *Second RCC Order*. We continue to reiterate that there is no "countervailing benefit sufficient to warrant imposing" the burden of filing monitoring processes, as the Commission may obtain most information—including monitoring process information—pursuant to its investigatory authority into covered provider practices under the Communications Act. Accordingly, we deny NTCA's Petition for Reconsideration in whole, pursuant to § 1.429(i) of our rules.

2. USTelecom Petition for Reconsideration

54. We also dismiss and deny a petition for reconsideration filed by USTelecom seeking review of rules adopted in the *Second RCC Order*. Specifically, USTelecom requests reconsideration of certain aspects of the Commission's monitoring rules for covered providers. As explained below, we dismiss the Petition as it relies on arguments already considered and rejected by the Commission in the *Second RCC Order*, and we reaffirm our findings that the monitoring rule appropriately balances the burdens our rules impose on covered providers with the need to address ongoing rural call completion issues. Moreover, the Commission's adoption of the monitoring rule is supported by the record in this proceeding and consistent with the provisions of the RCC Act.

a. Background

55. On June 11, 2018, USTelecom filed a petition for reconsideration of certain aspects of the covered provider monitoring rule adopted in the *Second RCC Order*. The *Second RCC Order* adopted a requirement, codified at 47 CFR 64.2111, that covered providers monitor the performance of the intermediate providers to which they hand off calls, and, based on the results

of such monitoring, take steps reasonably calculated to correct any identified performance problems with downstream intermediate providers. The *Second RCC Order* indicated that, under the monitoring rule, "a covered provider is accountable for monitoring the performance of any intermediate provider with which it contracts, including that intermediate provider's decision as to whether calls may be handed off to additional downstream intermediate providers . . . and whether it has taken sufficient steps to ensure that calls will be completed post-handoff." In order to comply with their obligations under the monitoring rule, the *Second RCC Order* afforded covered providers the flexibility to manage the call path through "(i) direct monitoring of all intermediate providers or (ii) a combination of direct monitoring of contracted intermediate providers and contractual restrictions on directly monitored intermediate providers that are reasonably calculated to ensure rural call completion through the responsible use of any further intermediate providers."

56. USTelecom seeks reconsideration of the requirement that covered providers exercise responsibility for the call completion performance of downstream intermediate providers with which there is no direct contractual relationship, arguing that this requirement "poses severe practical issues" and "creates an unreasonable compliance trap for originating providers." NCTA—The internet & Television Association (NCTA) and ITTA—The Voice of America's Broadband Providers (ITTA) filed comments in support of USTelecom's petition for reconsideration, while NTCA—The Rural Broadband Association filed comments in opposition.

b. Discussion

57. As an initial matter, we note that the Petition and supporting commenters rely on several substantive arguments previously submitted to the Commission prior to the adoption of the monitoring rule. Under § 1.429 of the Commission rules, petitions which "[r]ely on arguments that have been fully considered and rejected by the Commission within the same proceeding" "plainly do not warrant consideration by the Commission" and may be dismissed or denied.

58. As one of their primary arguments for reconsideration, USTelecom, NCTA, and ITTA claim that compliance with the monitoring rule necessitates modification of existing vendor agreements, which, they allege, "poses

severe practical issues." However, as NTCA observes, "this same argument was raised in the notice-and-comment phase of the rulemaking and rightly and squarely rejected by the Commission." In the *Second RCC Order*, we considered, and rejected, the argument that covered providers could not, or should not, bear any responsibility for the performance of non-contracted intermediate carriers. The Commission also recognized that "covered providers will need some time to evaluate and renegotiate contracts with intermediate providers in order to comply with the monitoring requirement." For this reason, we established a six-month transition period for covered providers to come into compliance with our rules. We therefore dismiss these arguments as having previously been considered by the Commission. Similarly, we dismiss related arguments advanced by USTelecom, ITTA, and NCTA concerning whether "direct" monitoring of intermediate providers with which there is no contractual relationship is feasible. These arguments were likewise considered, and rejected, by the Commission in the *Second RCC Order*.

59. Although USTelecom claims that "many originating providers will be unable to modify their vendor agreements" because "revisions [to contracts] can generally be made only during the vendor contract renewal terms," it offers no evidence to support these assertions, nor do any other commenters supporting the Petition. On the contrary, as NTCA notes, the *Second RCC Order* offered covered providers "ample time to establish the contractual provisions necessary" to comply with the monitoring rule, and, in any event, any covered provider unable to comply after this time has the option to request a waiver of our rules provided it can demonstrate good cause warranting grant of such relief.

60. We also disagree with ITTA's assertion that the monitoring rule "[c]ontravene[s] the RCC Act" because it "fl[ies] in the face of the statutory balancing crafted by Congress." ITTA has previously advanced similar arguments in this proceeding, which we rejected in the *Second RCC Order*. As we have explained, "passage of the RCC Act does not obviate the need for covered provider regulation," and our monitoring rule "complements, but exists independently of, the registry and service quality obligations contained in the RCC Act."

61. ITTA argues that the RCC Act's adoption of service quality and registry standards for intermediate providers suggests that Congress intended to focus responsibility for call completion issues

predominantly or entirely on intermediate providers. We disagree. ITTA's arguments suggest a fundamental misreading of the RCC Act and its relationship to existing Commission rules and precedent concerning rural call completion issues. Had Congress intended to shield covered providers from rural call completion rules, it could easily have done so in the RCC Act. Contrary to ITTA's suggestion, however, the RCC Act recognized and approved of the Commission's efforts to hold covered providers accountable for rural call completion issues, and granted the Commission additional authority to support a complementary regulatory regime for intermediate providers. Specifically, in passing the RCC Act, Congress repeatedly referenced the Commission's regulation of covered providers, both in the text of the Act and the accompanying legislative history, noting that the Commission was free to model its service quality standards for intermediate providers on the "general . . . duties to complete calls" that apply to covered providers. These duties, implicitly endorsed by Congress, include those described in the *2012 Declaratory Ruling*, which clarified that "a carrier remains responsible for the provision of service to its customers even when it contracts with another provider to carry the call to its destination." As we explained in the *Second RCC Order*, these same obligations form the basis of the monitoring rule for covered providers.

62. ITTA also argues that the Commission's finding in the *Second RCC Order* that covered providers are able to use pass-through contractual restrictions to ensure call completion is "[u]nsupported by the [r]ecord." We disagree. Indeed, ITTA's own comments point to relevant record support for this finding, including, as described by ITTA: "[A] reference to third-party vendors performing monitoring; a suggested best practice whereby contractual agreements can be used to ensure that intermediate providers meet performance standards and hold other intermediate providers accountable for performance; and one commenter stating that its direct contracts with intermediate providers stipulate that the intermediate provider may use no more than one additional intermediate provider before the call is terminated." In its comments, ITTA summarily dismisses this record support based on the assertion that it does not constitute "actual evidence." ITTA provides no analysis or elaboration whatsoever to support this claim; however, insofar as

ITTA makes an argument that the monitoring rule lacks record support, we disagree. We also disagree with ITTA's contention that the *Second RCC Order* is "rife with potential confusion." ITTA's argument appears to rest on its assertion that the *Second RCC Order* "cobbl[es] together three things that it 'encourage[s]' into a *de facto* requirement." However, as the *Second RCC Order* makes clear, none of the specific practices referenced by ITTA—including "adherence to the ATIS RCC Handbook," "limit[ing] the number of intermediate providers in the call chain," and incorporation of examples of contractual provisions that ensure quality call completion—are required. *Id.* To the contrary, while covered providers "must exercise responsibility for the performance of the entire intermediate provider call path to help ensure that calls to rural areas are completed," the *Second RCC Order* grants covered providers "flexibility in how they fulfill this responsibility" allowing each to "determine the standards and methods best suited to their individual networks." The record evidence in this proceeding demonstrates that covered providers can, and do, utilize contractual restrictions to ensure call completion by downstream intermediate providers, including those with which there is no direct contractual relationship. For these reasons, we affirm our finding that the monitoring rule is supported by the record in this proceeding.

63. For the foregoing reasons, to the extent that USTelecom and commenters supporting its Petition rely on arguments concerning the costs associated with contractual negotiations that may be necessitated by the monitoring rule, we dismiss these arguments as having been previously considered and rejected by the Commission. To the extent that the Petition and supporting comments raise novel arguments in this proceeding, we dismiss these arguments on the merits, as discussed above.

IV. Final Regulatory Flexibility Analysis

64. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), an Initial Regulatory Flexibility Analysis (IRFA) was incorporated into the *Third Further Notice of Proposed Rulemaking (Third RCC FNPRM)* for the Rural Call Completion proceeding. The Commission sought written public comment on the proposals in the *Third RCC FNPRM*, including comment on the IRFA. The Commission received no comments on the IRFA. Because the Commission amends its rules in this

Fourth Report and Order (Order), the Commission has included this Final Regulatory Flexibility Analysis (FRFA). This present FRFA conforms to the RFA.

A. Need for, and Objectives of, the Proposed Rules

65. In this *Order*, we revise our rules to continue to address ongoing problems in completion of long-distance calls. Specifically, we establish intermediate provider service quality standards; modify the covered provider safe harbor, and sunset call data recording and retention requirements. These actions further implement the Improving Rural Call Quality and Reliability Act of 2017 (RCC Act), and to continue "to ensure the integrity of voice communications and to prevent unjust or unreasonable discrimination among areas of the United States in the delivery of such communications."

66. First, we establish service quality standards for intermediate providers. Specifically, we require intermediate providers to take steps reasonably calculated to ensure that any calls that they handle are in fact completed. If an intermediate provider knows, or should know, that calls are not being completed to certain areas, the intermediate provider may be in violation of this general duty if it engages in acts or omissions that allow or effectively allow these conditions to persist. Intermediate providers must also ensure that any additional intermediate providers to which they hand off calls are registered with the Commission.

67. In addition, with respect to traffic destined for rural areas, intermediate providers must actively monitor the performance of any directly contracted downstream intermediate provider and, based on the results of such monitoring, take steps to address any identified performance issues with that provider. The Commission believes these rules will effectuate Congress's intent in passing the RCC Act, and further the Commission's efforts to ensure that all calls to rural areas are completed.

68. Due to the variety of providers and network technologies that may be subject to the Commission's service quality standards, the rules set forth in the *Order* grant intermediate providers compliance flexibility, thereby benefitting businesses of all sizes and their subscribers. The *Order*'s intermediate provider service quality standards parallel those already applicable to covered providers under the *Second RCC Order* and earlier Commission orders and rulings, ensuring the Commission's rules effectively address rural call completion

issues while also avoiding unnecessary compliance burdens on intermediate providers—particularly those that serve dual roles as both covered and intermediate providers.

69. Second, we add a covered provider safe harbor to comply with the RCC Act. The service quality standards adopted in the *Order*—pursuant to the RCC Act—apply only to intermediate providers. However, the RCC Act’s exemption is limited to covered providers. The *Order* therefore clarifies that covered providers qualifying for the safe harbor on or before February 26, 2019 will be exempt from the intermediate provider service quality rules when serving as intermediate providers, provided they maintain their safe harbor certification with the Commission. Though the *Order* maintains the three preexisting safe harbor requirements without change, and retains the existing recording and retention safe harbor until those requirements expire, it adds § 64.2109 to add the application of the safe harbor to the *Order*’s newly adopted service quality standards for intermediate providers.

70. Third, as proposed by the *Third RCC FNPRM*, we sunset the covered provider call data recording and retention requirements the Commission established in 2013, thus eliminating these requirements one year after the effective date of the service quality standards adopted in this *Order*. We conclude that the existing recording and retention rules are burdensome on covered providers, and the resulting data, as previously prescribed by the Commission, are of limited utility to us in discovering the source of rural call completion problems. We further conclude that a voluntary recording and retention scheme, using the metrics chosen by individual covered providers, will serve to best inform covered providers and the Commission of rural call completion issues and the best pathway to their resolution. As this will serve to effectively remove an information collection burden from all size businesses, small businesses should benefit from a removed information collection and retention burden as well.

B. Summary of Significant Issues Raised by Public Comments in Response to the IRFA

71. The Commission did not receive comments specifically addressing the rules and policies proposed in the IRFA.

C. Response to Comment by the Chief Counsel for Advocacy of the Small Business Administration

72. The Chief Counsel did not file any comments in response to this proceeding.

D. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

73. The RFA directs agencies to provide a description of, and where feasible, an estimate of the number of small entities that may be affected by the proposed rules and by the rule revisions on which the NPRM seeks comment, if adopted. The RFA generally defines the term “small entity” as having the same meaning as the terms “small business,” “small organization,” and “small governmental jurisdiction.” In addition, the term “small business” has the same meaning as the term “small-business concern” under the Small Business Act. A “small-business concern” is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

74. *Small Businesses, Small Organizations, Small Governmental Jurisdictions.* Our actions, over time, may affect small entities that are not easily categorized at present. We therefore describe here, at the outset, three comprehensive small entity size standards that could be directly affected herein. First, while there are industry specific size standards for small businesses that are used in the regulatory flexibility analysis, according to data from the SBA’s Office of Advocacy, in general a small business is an independent business having fewer than 500 employees. These types of small businesses represent 99.9% of all businesses in the United States which translates to 28.8 million businesses. Next, the type of small entity described as a “small organization” is generally “any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.” Nationwide, as of 2007, there were approximately 1,621,215 small organizations. Finally, the small entity described as a “small governmental jurisdiction” is defined generally as “governments of cities, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand.” U.S. Census Bureau data published in 2012 indicate that there were 89,476 local governmental jurisdictions in the United States. We estimate that, of this total, as many as 88,761 entities may

qualify as “small governmental jurisdictions.” Thus, we estimate that most governmental jurisdictions are small.

75. *Wired Telecommunications Carriers.* The U.S. Census Bureau defines this industry as “establishments primarily engaged in operating and/or providing access to transmission facilities and infrastructure that they own and/or lease for the transmission of voice, data, text, sound, and video using wired communications networks. Transmission facilities may be based on a single technology or a combination of technologies. Establishments in this industry use the wired telecommunications network facilities that they operate to provide a variety of services, such as wired telephony services, including VoIP services, wired (cable) audio and video programming distribution, and wired broadband internet services. By exception, establishments providing satellite television distribution services using facilities and infrastructure that they operate are included in this industry.” The SBA has developed a small business size standard for Wired Telecommunications Carriers, which consists of all such companies having 1,500 or fewer employees. Census data for 2012 show that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. Thus, under this size standard, the majority of firms in this industry can be considered small.

76. *Local Exchange Carriers (LECs).* Neither the Commission nor the SBA has developed a size standard for small businesses specifically applicable to local exchange services. The closest applicable NAICS Code category is Wired Telecommunications Carriers as defined above. Under the applicable SBA size standard, such a business is small if it has 1,500 or fewer employees. According to Commission data, census data for 2012 show that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. The Commission therefore estimates that most providers of local exchange carrier service are small entities that may be affected by the rules adopted.

77. *Incumbent LECs.* Neither the Commission nor the SBA has developed a small business size standard specifically for incumbent local exchange services. The closest applicable NAICS Code category is Wired Telecommunications Carriers as defined above. Under that size standard, such a business is small if it has 1,500 or fewer employees. According to Commission data, 3,117 firms operated

in that year. Of this total, 3,083 operated with fewer than 1,000 employees. Consequently, the Commission estimates that most providers of incumbent local exchange service are small businesses that may be affected by the rules and policies adopted. Three hundred and seven (307) Incumbent Local Exchange Carriers reported that they were incumbent local exchange service providers. Of this total, an estimated 1,006 have 1,500 or fewer employees.

78. *Competitive Local Exchange Carriers (Competitive LECs), Competitive Access Providers (CAPs), Shared-Tenant Service Providers, and Other Local Service Providers.* Neither the Commission nor the SBA has developed a small business size standard specifically for these service providers. The appropriate NAICS Code category is Wired Telecommunications Carriers, as defined above. Under that size standard, such a business is small if it has 1,500 or fewer employees. U.S. Census data for 2012 indicate that 3,117 firms operated during that year. Of that number, 3,083 operated with fewer than 1,000 employees. Based on this data, the Commission concludes that the majority of Competitive LECs, CAPs, Shared-Tenant Service Providers, and Other Local Service Providers, are small entities. According to Commission data, 1,442 carriers reported that they were engaged in the provision of either competitive local exchange services or competitive access provider services. Of these 1,442 carriers, an estimated 1,256 have 1,500 or fewer employees. In addition, 17 carriers have reported that they are Shared-Tenant Service Providers, and all 17 are estimated to have 1,500 or fewer employees. Also, 72 carriers have reported that they are Other Local Service Providers. Of this total, 70 have 1,500 or fewer employees. Consequently, based on internally researched FCC data, the Commission estimates that most providers of competitive local exchange service, competitive access providers, Shared-Tenant Service Providers, and Other Local Service Providers are small entities.

79. We have included small incumbent LECs in this present RFA analysis. As noted above, a “small business” under the RFA is one that, *inter alia*, meets the pertinent small business size standard (e.g., a telephone communications business having 1,500 or fewer employees), and “is not dominant in its field of operation.” The SBA’s Office of Advocacy contends that, for RFA purposes, small incumbent LECs are not dominant in their field of operation because any such dominance

is not “national” in scope. We have therefore included small incumbent LECs in this RFA analysis, although we emphasize that this RFA action has no effect on Commission analyses and determinations in other, non-RFA contexts.

80. *Interexchange Carriers (IXCs).* Neither the Commission nor the SBA has developed a definition for Interexchange Carriers. The closest NAICS Code category is Wired Telecommunications Carriers as defined above. The applicable size standard under SBA rules is that such a business is small if it has 1,500 or fewer employees. U.S. Census data for 2012 indicate that 3,117 firms operated during that year. Of that number, 3,083 operated with fewer than 1,000 employees. According to internally developed Commission data, 359 companies reported that their primary telecommunications service activity was the provision of interexchange services. Of this total, an estimated 317 have 1,500 or fewer employees. Consequently, the Commission estimates that the majority of IXCs are small entities that may be affected by our rules.

81. *Local Resellers.* The SBA has developed a small business size standard for the category of Telecommunications Resellers. The Telecommunications Resellers industry comprises establishments engaged in purchasing access and network capacity from owners and operators of telecommunications networks and reselling wired and wireless telecommunications services (except satellite) to businesses and households. Establishments in this industry resell telecommunications; they do not operate transmission facilities and infrastructure. Mobile virtual network operators (MVNOs) are included in this industry. Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that 1,341 firms provided resale services during that year. Of that number, all operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of these prepaid calling card providers can be considered small entities.

82. *Toll Resellers.* The Commission has not developed a definition for Toll Resellers. The closest NAICS Code Category is Telecommunications Resellers. The Telecommunications Resellers industry comprises establishments engaged in purchasing access and network capacity from owners and operators of telecommunications networks and

reselling wired and wireless telecommunications services (except satellite) to businesses and households. Establishments in this industry resell telecommunications; they do not operate transmission facilities and infrastructure. Mobile virtual network operators (MVNOs) are included in this industry. The SBA has developed a small business size standard for the category of Telecommunications Resellers. Under that size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that 1,341 firms provided resale services during that year. Of that number, 1,341 operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of these resellers can be considered small entities. According to Commission data, 881 carriers have reported that they are engaged in the provision of toll resale services. Of this total, an estimated 857 have 1,500 or fewer employees. Consequently, the Commission estimates that the majority of toll resellers are small entities.

83. *Other Toll Carriers.* Neither the Commission nor the SBA has developed a definition for small businesses specifically applicable to Other Toll Carriers. This category includes toll carriers that do not fall within the categories of interexchange carriers, operator service providers, prepaid calling card providers, satellite service carriers, or toll resellers. The closest applicable NAICS Code category is for Wired Telecommunications Carriers as defined above. Under the applicable SBA size standard, such a business is small if it has 1,500 or fewer employees. Census data for 2012 show that there were 3,117 firms that operated that year. Of this total, 3,083 operated with fewer than 1,000 employees. Thus, under this category and the associated small business size standard, the majority of Other Toll Carriers can be considered small. According to internally developed Commission data, 284 companies reported that their primary telecommunications service activity was the provision of other toll carriage. Of these, an estimated 279 have 1,500 or fewer employees. Consequently, the Commission estimates that most Other Toll Carriers are small entities that may be affected by rules adopted pursuant to this Order.

84. *Prepaid Calling Card Providers.* The SBA has developed a definition for small businesses within the category of Telecommunications Resellers. Under that SBA definition, such a business is small if it has 1,500 or fewer employees. According to the Commission’s Form

499 Filer Database, 500 companies reported that they were engaged in the provision of prepaid calling cards. The Commission does not have data regarding how many of these 500 companies have 1,500 or fewer employees. Consequently, the Commission estimates that there are 500 or fewer prepaid calling card providers that may be affected by the rules.

85. *Wireless Telecommunications Carriers (except Satellite)*. This industry comprises establishments engaged in operating and maintaining switching and transmission facilities to provide communications via the airwaves. Establishments in this industry have spectrum licenses and provide services using that spectrum, such as cellular services, paging services, wireless internet access, and wireless video services. The appropriate size standard under SBA rules is that such a business is small if it has 1,500 or fewer employees. For this industry, U.S. Census data for 2012 show that there were 967 firms that operated for the entire year. Of this total, 955 firms had employment of 999 or fewer employees and 12 had employment of 1000 employees or more. Thus under this category and the associated size standard, the Commission estimates that the majority of wireless telecommunications carriers (except satellite) are small entities.

86. The Commission's own data—available in its Universal Licensing System—indicate that, as of October 25, 2016, there are 280 Cellular licensees that will be affected by our actions today. The Commission does not know how many of these licensees are small, as the Commission does not collect that information for these types of entities. Similarly, according to internally developed Commission data, 413 carriers reported that they were engaged in the provision of wireless telephony, including cellular service, Personal Communications Service, and Specialized Mobile Radio Telephony services. Of this total, an estimated 261 have 1,500 or fewer employees, and 152 have more than 1,500 employees. Thus, using available data, we estimate that the majority of wireless firms can be considered small.

87. *Wireless Communications Services*. This service can be used for fixed, mobile, radiolocation, and digital audio broadcasting satellite uses. The Commission defined “small business” for the wireless communications services (WCS) auction as an entity with average gross revenues of \$40 million for each of the three preceding years, and a “very small business” as an entity with average gross revenues of \$15

million for each of the three preceding years. The SBA has approved these definitions.

88. *Wireless Telephony*. Wireless telephony includes cellular, personal communications services, and specialized mobile radio telephony carriers. As noted, the SBA has developed a small business size standard for Wireless Telecommunications Carriers (except Satellite). Under the SBA small business size standard, a business is small if it has 1,500 or fewer employees. According to Commission data, 413 carriers reported that they were engaged in wireless telephony. Of these, an estimated 261 have 1,500 or fewer employees and 152 have more than 1,500 employees. Therefore, a little less than one third of these entities can be considered small.

89. *Cable and Other Subscription Programming*. This industry comprises establishments primarily engaged in operating studios and facilities for the broadcasting of programs on a subscription or fee basis. The broadcast programming is typically narrowcast in nature (e.g., limited format, such as news, sports, education, or youth-oriented). These establishments produce programming in their own facilities or acquire programming from external sources. The programming material is usually delivered to a third party, such as cable systems or direct-to-home satellite systems, for transmission to viewers. The SBA has established a size standard for this industry stating that a business in this industry is small if it has 1,500 or fewer employees. The 2012 Economic Census indicates that 367 firms were operational for that entire year. Of this total, 357 operated with less than 1,000 employees. Accordingly we conclude that a substantial majority of firms in this industry are small under the applicable SBA size standard.

90. *Cable Companies and Systems (Rate Regulation)*. The Commission has developed its own small business size standards for the purpose of cable rate regulation. Under the Commission's rules, a “small cable company” is one serving 400,000 or fewer subscribers nationwide. Industry data indicate that there are currently 4,600 active cable systems in the United States. Of this total, all but eleven cable operators nationwide are small under the 400,000-subscriber size standard. In addition, under the Commission's rate regulation rules, a “small system” is a cable system serving 15,000 or fewer subscribers. Current Commission records show 4,600 cable systems nationwide. Of this total, 3,900 cable systems have fewer than 15,000 subscribers, and 700 systems

have 15,000 or more subscribers, based on the same records. Thus, under this standard as well, we estimate that most cable systems are small entities.

91. *Cable System Operators (Telecom Act Standard)*. The Communications Act also contains a size standard for small cable system operators, which is “a cable operator that, directly or through an affiliate, serves in the aggregate fewer than 1 percent of all subscribers in the United States and is not affiliated with any entity or entities whose gross annual revenues in the aggregate exceed \$250,000,000.” There are approximately 52,403,705 cable video subscribers in the United States today. Accordingly, an operator serving fewer than 524,037 subscribers shall be deemed a small operator if its annual revenues, when combined with the total annual revenues of all its affiliates, do not exceed \$250 million in the aggregate. Based on available data, we find that all but nine incumbent cable operators are small entities under this size standard. We note that the Commission neither requests nor collects information on whether cable system operators are affiliated with entities whose gross annual revenues exceed \$250 million. Although it seems certain that some of these cable system operators are affiliated with entities whose gross annual revenues exceed \$250 million, we are unable at this time to estimate with greater precision the number of cable system operators that would qualify as small cable operators under the definition in the Communications Act.

92. *All Other Telecommunications*. “All Other Telecommunications” is defined as follows: This U.S. industry is comprised of establishments that are primarily engaged in providing specialized telecommunications services, such as satellite tracking, communications telemetry, and radar station operation. This industry also includes establishments primarily engaged in providing satellite terminal stations and associated facilities connected with one or more terrestrial systems and capable of transmitting telecommunications to, and receiving telecommunications from, satellite systems. Establishments providing internet services or voice over internet protocol (VoIP) services via client-supplied telecommunications connections are also included in this industry. The SBA has developed a small business size standard for “All Other Telecommunications,” which consists of all such firms with gross annual receipts of \$32.5 million or less. For this category, census data for 2012 show that there were 1,442 firms that

operated for the entire year. Of these firms, a total of 1,400 had gross annual receipts of less than \$25 million. Consequently, we estimate that the majority of All Other Telecommunications firms are small entities that might be affected by our action.

E. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

93. In implementing the RCC Act, first, the *Order* establishes service quality standards for intermediate providers. Specifically, it requires intermediate providers to take steps reasonably calculated to ensure that any calls that they handle are in fact completed. Due to the variety of providers and network technologies that may be subject to the Commission's service quality standards, the rules set forth in the *Order* grant intermediate providers compliance flexibility, thereby benefitting subscribers and entities of all sizes.

94. Second, the *Order* modifies the covered provider safe harbor to comply with the RCC Act. The service quality standards adopted in the *Order*—pursuant to the RCC Act—apply only to intermediate providers. However, the RCC Act's exemption is limited to covered providers. The *Order* therefore clarifies that covered providers qualifying for safe harbor on or before February 26, 2019 will be exempt from the intermediate provider service quality rules when serving as intermediate providers, provided they maintain their safe harbor certification with the Commission. Though the *Order* maintains the three preexisting safe harbor requirements without change, it modifies § 64.2107 to reflect removal of the remaining data recording and retention requirements originally associated with the safe harbor, and the application of the safe harbor to the *Order's* newly adopted service quality standards for intermediate providers. Until the intermediate provider registry is established pursuant to the RCC Act, it is unknown to the Commission at this time the number of any size entities affected by this regulation.

95. The *Order* sunsets the remaining covered provider call data recording and retention requirements the Commission established in 2013, thus eliminating these requirements one year after the service quality standards in this *Order* become effective. As this will serve to effectively remove any information collection burden from all size entities, small entities should benefit from a removed information collection and retention burden as well.

F. Steps Taken To Minimize the Significant Economic Impact on Small Entities, and Significant Alternatives Considered

96. The RFA requires an agency to describe any significant, specifically small business, alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance and reporting requirements under the rules for such small entities; (3) the use of performance rather than design standards; and (4) an exemption from coverage of the rule, or any part thereof, for such small entities.

97. In the *Order*, the Commission establishes intermediate provider service quality standards, modifies the covered provider safe harbor, and sunsets call data recording and retention. The Commission also directs the Wireline Competition Bureau to seek comment, one year from the effective date of the intermediate provider service quality standards, on the effectiveness of those standards in addressing rural call completion issues.

98. As the RCC Act mandates, this *Order* first adopts service quality standards for intermediate providers. Specifically, we require intermediate providers to take steps reasonably calculated to ensure that any calls that they handle are in fact completed. If an intermediate provider knows, or should know, that calls are not being completed to certain areas, the intermediate provider may be in violation of this general duty if it engages in acts or omissions that allow or effectively allow these conditions to persist. Intermediate providers must also establish processes to monitor their rural call completion performance and ensure that any additional intermediate providers to which they hand off calls are registered with the Commission.

99. One alternative considered—and declined—is mandating compliance with the with the three ATIS best practices as proposed in the *Third RCC FNPRM*, and instead adopt a set of flexible standards for intermediate providers based on our rules for covered providers. We agree with commenters who argue that mandating compliance with the three ATIS best practices may be impractical or unduly burdensome for some intermediate providers, particularly those relying on older network technologies to provide service.

However, the Commission will treat intermediate provider compliance with the ATIS best practices as a safe harbor demonstrating compliance with our service quality standards for intermediate providers of all sizes.

100. Second, we add the covered provider safe harbor to comply with the RCC Act. The service quality standards adopted in the *Order*—pursuant to the RCC Act—apply only to intermediate providers. However, the RCC Act's exemption is limited to covered providers. The *Order* therefore clarifies that covered providers qualifying for safe harbor on or before February 26, 2019 will be exempt from the intermediate provider service quality rules when serving as intermediate providers, provided they maintain their safe harbor certification with the Commission. Though the *Order* maintains the three preexisting safe harbor requirements without change, and retains the existing recording and retention safe harbor until those requirements expire, it adds § 64.2109 to add the application of the safe harbor to the *Order's* newly adopted service quality standards for intermediate providers. Because no small entities have previously filed for safe harbor in this proceeding, the Commission is confident the economic impact of this change upon small entities is minimal.

V. Procedural Matters

101. *Final Regulatory Flexibility Analysis.* As required by the Regulatory Flexibility Act of 1980, see 5 U.S.C. 604, the Commission has prepared a Final Regulatory Flexibility Analysis (FRFA) of the possible significant economic impact on small entities of the policies and rules, as proposed, addressed in this *Fourth Report and Order*. The FRFA is set forth in section IV above. The Commission will send a copy of this *Fourth Report and Order*, including the FRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA).

102. *Paperwork Reduction Act.* As the Commission is hereby sunsetting the remaining rural call completion data recording and retention requirements, thereby eliminating an information collection in its entirety, this *Fourth Report and Order* does not contain new or modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13. In addition, therefore, it does not contain any new or modified information collection burden for small business concerns with fewer than 25 employees, pursuant to the Small Business Paperwork Relief Act of 2002,

Public Law 107–198, *see* 44 U.S.C. 3506(c)(4).

103. *Congressional Review Act.* The Commission will send a copy of this *Fourth Report and Order* to Congress and the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

104. *Contact Person.* For further information about this rulemaking proceeding, please contact Zach Ross, FCC Wireline Competition Bureau, Competition Policy Division, Room 5–C211, 445 12th Street SW, Washington, DC 20554, at (202) 418–1033 or *Zachary.Ross@fcc.gov*.

VI. Ordering Clauses

105. Accordingly, *it is ordered* that, pursuant to sections 1, 4(i), 201(b), 202(a), 217, and 262 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i), 201(b), 202(a), 217, and 262, this *Fourth Report and Order* is adopted.

106. *It is further ordered* that part 64 of the Commission's rules are amended as set forth in the Final Rules.

107. *It is further ordered* that, pursuant to §§ 1.4(b)(1) and 1.103(a) of the Commission's rules, 47 CFR 1.4(b)(1), 1.103(a), this *Fourth Report and Order* shall be effective 30 days after publication of a summary in the **Federal Register**.

108. *It is further ordered* that pursuant to the authority contained in sections 1, 4(i), 201(b), 202(a), 217, 218, 220(a), 251(a), and 262 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i), 201(b), 202(a), 217, 218, 220(a), 251(a), and 262, NTCA's Petition for Reconsideration filed on June 11, 2018 in WC Docket No. 13–39 is *denied*.

109. *It is further ordered* that pursuant to the authority contained in sections 1, 4(i), 201(b), 202(a), 217, 218, 220(a), 251(a), and 262 of the Communications Act of 1934, as amended, 47 U.S.C. 151, 154(i), 201(b), 202(a), 217, 218, 220(a), 251(a), and 262, USTelecom's Petition for Reconsideration filed on June 11, 2018 in WC Docket No. 13–39 is *denied*.

110. *It is further ordered* that the Commission shall send a copy of this *Fourth Report and Order* to Congress and to the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

111. *It is further ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, shall send a copy of this *Fourth Report and Order*, including the Final Regulatory Flexibility Analysis and Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects in 47 CFR Part 64

Communications and common carriers, Reporting and recordkeeping requirements, Telecommunications, Telephone.

Federal Communications Commission.

Marlene Dortch,

Secretary.

Final Rules

For the reasons discussed in the preamble, the Federal Communications Commission amends part 64 of title 47 of the Code of Federal Regulations as follows:

PART 64—MISCELLANEOUS RULES RELATING TO COMMON CARRIERS

■ 1. The authority citation for part 64 continues as follows:

Authority: 47 U.S.C. 154, 201, 202, 217, 218, 220, 222, 225, 226, 227, 228, 251(a), 251(e), 254(k), 262, 403(b)(2)(B), (c), 616, 620, 1401–1473, unless otherwise noted.

■ 2. Amend § 64.2103 by adding paragraph (g) to read as follows:

§ 64.2103 Retention of call attempt records.

* * * * *

(g) The provisions of this section shall expire on September 15, 2020.

■ 3. Amend § 64.2107 by adding paragraph (d) to read as follows:

§ 64.2107 Reduced recording and retention requirements for qualifying providers under the Safe Harbor.

* * * * *

(d) The provisions of this section shall expire on September 15, 2020.

■ 4. Add § 64.2109 to read as follows:

§ 64.2109 Safe harbor from intermediate provider service quality standards.

(a)(1) A covered provider may qualify as a safe harbor provider under this subpart if it files, in WC Docket No. 13–39, one of the following certifications, signed under penalty of perjury by an officer or director of the covered provider regarding the accuracy and completeness of the information provided:

“I ___ (name), ___ (title), an officer of ___ (entity), certify that ___ (entity) uses no intermediate providers;” or

“I ___ (name), ___ (title), an officer of ___ (entity), certify that ___ (entity) restricts by contract any intermediate provider to which a call is directed by ___ (entity) from permitting more than one additional intermediate provider in the call path before the call reaches the terminating provider or terminating tandem. I certify that any nondisclosure agreement with an intermediate

provider permits ___ (entity) to reveal the identity of the intermediate provider and any additional intermediate provider to the Commission and to the rural incumbent local exchange carrier(s) whose incoming long-distance calls are affected by the intermediate provider's performance. I certify that ___ (entity) has a process in place to monitor the performance of its intermediate providers.”

(2) The certification in paragraph (a)(1) of this section must be submitted:

(i) For the first time on or before February 26, 2019; and

(ii) Annually thereafter.

(b) The requirements of § 64.2119 shall not apply to intermediate provider traffic transmitted by safe harbor qualifying covered providers functioning as intermediate providers.

■ 5. Add § 64.2119 to subpart V to read as follows:

§ 64.2119 Intermediate provider service quality standards.

Any intermediate provider that offers or holds itself out as offering the capability to transmit covered voice communications from one destination to another and that charges any rate to any other entity (including an affiliated entity) for the transmission must abide by the following service quality standards:

(a) *Duty to complete calls.* Intermediate providers must take steps reasonably calculated to ensure that all covered voice communications that traverse their networks are delivered to their destination. An intermediate provider may violate this duty to complete calls if it knows, or should know, that calls are not being completed to certain areas, and it engages in acts or omissions that allow, or effectively allow, these conditions to persist.

(b) *Rural call completion performance monitoring.* For each intermediate provider with which it contracts, an intermediate provider shall:

(1) Monitor the intermediate provider's performance in the completion of call attempts to rural telephone companies; and

(2) Based on the results of such monitoring, take steps that are reasonably calculated to correct any identified performance problem with the intermediate provider, including removing that provider for sustained poor performance.

(c) *Registration of subsequent intermediate providers.* Intermediate providers shall ensure that any additional intermediate providers to which they hand off calls are registered

with the Commission pursuant to § 64.2115.

BILLING CODE 6712-01-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 635

[Docket No. 180117042-8884-02]

RIN 0648-XG950

Atlantic Highly Migratory Species; Atlantic Bluefin Tuna Fisheries

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule.

SUMMARY: NMFS closes the Gulf of Mexico Angling category incidental fishery for large medium and giant (“trophy” (*i.e.*, measuring 73 inches curved fork length or greater)) Atlantic bluefin tuna (BFT). This action is being taken to prevent overharvest of the Angling category Gulf of Mexico trophy BFT subquota.

DATES: Effective 11:30 p.m., local time, May 31, 2019 through December 31, 2019.

FOR FURTHER INFORMATION CONTACT: Sarah McLaughlin, 978-281-9260 or Larry Redd, 301-427-8503.

SUPPLEMENTARY INFORMATION: Regulations implemented under the authority of the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 *et seq.*) and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*) governing the harvest of BFT by persons and vessels subject to U.S. jurisdiction are found at 50 CFR part 635. Section 635.27 subdivides the U.S. BFT quota recommended by the International Commission for the Conservation of Atlantic Tunas (ICCAT) among the various domestic fishing categories, per the allocations established in the 2006 Consolidated Atlantic Highly Migratory Species Fishery Management Plan (2006 Consolidated HMS FMP) (71 FR 58058, October 2, 2006) and amendments.

NMFS is required, under § 635.28(a)(1), to file a closure notice with the Office of the Federal Register for publication when a BFT quota is reached or is projected to be reached. On and after the effective date and time of such notification, for the remainder of

the fishing year or for a specified period as indicated in the notification, retaining, possessing, or landing BFT under that quota category is prohibited until the opening of the subsequent quota period or until such date as specified in the notice.

Angling Category Large Medium and Giant Gulf of Mexico “Trophy” Fishery Closure

The 2019 BFT fishing year, which is managed on a calendar-year basis and subject to an annual calendar-year quota, began January 1, 2019. The Angling category season opened January 1, 2019, and continues through December 31, 2019. The currently codified Angling category quota is 232.4 metric tons (mt), of which 5.3 mt is allocated for the harvest of large medium and giant (trophy) BFT by vessels fishing under the Angling category quota, with 1.8 mt allocated for each of the following areas: North of 39°18' N lat. (off Great Egg Inlet, NJ); south of 39°18' N lat. and outside the Gulf of Mexico (the “southern area”); and in the Gulf of Mexico. Trophy BFT measure 73 inches (185 cm) curved fork length or greater.

Based on reported landings from the NMFS Automated Catch Reporting System, NMFS has determined that the codified Angling category Gulf of Mexico trophy BFT subquota of 1.8 mt has been reached and that a closure of the Gulf of Mexico trophy BFT fishery is warranted. Therefore, retaining, possessing, or landing large medium or giant BFT in the Gulf of Mexico by persons aboard vessels permitted in the HMS Angling category and the HMS Charter/Headboat category (when fishing recreationally) must cease at 11:30 p.m. local time on May 31, 2019. This closure will remain effective through December 31, 2019. This action is intended to prevent overharvest of the Angling category Gulf of Mexico trophy BFT subquota, and is taken consistent with the regulations at § 635.28(a)(1).

If needed, subsequent Angling category adjustments will be published in the **Federal Register**. Information regarding the Angling category fishery for Atlantic tunas, including daily retention limits for BFT measuring 27 inches (68.5 cm) to less than 73 inches and any further Angling category adjustments, is available at [hmspermits.noaa.gov](https://www.fisheries.noaa.gov) or by calling (978) 281-9260. HMS Angling and HMS Charter/Headboat category permit holders may catch and release (or tag and release) BFT of all sizes, subject to the requirements of the catch-and-release and tag-and-release programs at § 635.26. Anglers are also reminded that

all BFT that are released must be handled in a manner that will maximize survival, and without removing the fish from the water, consistent with requirements at § 635.21(a)(1). For additional information on safe handling, see the “Careful Catch and Release” brochure available at <https://www.fisheries.noaa.gov/resource/outreach-and-education/careful-catch-and-release-brochure>.

HMS Charter/Headboat and Angling category vessel owners are required to report the catch of all BFT retained or discarded dead, within 24 hours of the landing(s) or end of each trip, by accessing hmspermits.noaa.gov, using the HMS Catch Reporting app, or calling (888) 872-8862 (Monday through Friday from 8 a.m. until 4:30 p.m.).

Classification

The Assistant Administrator for NMFS (AA) finds that it is impracticable and contrary to the public interest to provide prior notice of, and an opportunity for public comment on, this action for the following reasons:

The regulations implementing the 2006 Consolidated HMS FMP and amendments provide for inseason retention limit adjustments and fishery closures to respond to the unpredictable nature of BFT availability on the fishing grounds, the migratory nature of this species, and the regional variations in the BFT fishery. The closure of the Angling category Gulf of Mexico trophy fishery is necessary to prevent overharvest of the Gulf of Mexico trophy fishery subquota. NMFS provides notification of closures by publishing the notice in the **Federal Register**, emailing individuals who have subscribed to the Atlantic HMS News electronic newsletter, and updating the information posted on the Atlantic Tunas Information Line and on hmspermits.noaa.gov.

These fisheries are currently underway, and delaying this action would be contrary to the public interest as it could result in excessive trophy BFT landings that may result in future potential quota reductions for the Angling category, depending on the magnitude of a potential Angling category overharvest. NMFS must close the Gulf of Mexico trophy BFT fishery before additional landings of these sizes of BFT occur. Therefore, the AA finds good cause under 5 U.S.C. 553(b)(B) to waive prior notice and the opportunity for public comment. For all of the above reasons, there is good cause under 5 U.S.C. 553(d) to waive the 30-day delay in effectiveness.
