

munitions; supply and maintenance support; spares and repair parts; support equipment; U.S. Government program management; publications; documentation; personnel training and training equipment; fuel and fueling services; U.S. Government and contractor engineering, technical, and logistics support services; and other related elements of program and logistical support necessary to sustain a long-term CONUS training program. The total estimated program cost is \$500 million.

This proposed sale is consistent with U.S. law and policy as expressed in Public Law 96-8.

This proposed sale will support the foreign policy and national security of the United States by helping to improve the security and defensive capability of the recipient, which has been and continues to be an important force for political stability, military balance, and economic progress in the region.

The recipient and the United States Air Force (USAF) will have the opportunity to fly together, which will support disaster relief missions, non-combatant evacuation operations, and other contingency situations. These services and equipment are used in the continuing pilot training program currently at Luke Air Force Base,

Arizona. This program enables the recipient to develop mission ready and experienced pilots through CONUS training. The training provides a "capstone" course that takes experienced pilots and significantly improves their tactical proficiency. Training is a key component of combat effectiveness.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The prime contractors will be URS Federal Services, Inc., Germantown, MD and L3, Greenville, Texas. At this time, there are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will not require the assignment of any additional U.S. Government or contractor representatives to the recipient. The USAF will provide instruction, flight operations, maintenance support and facilities. Approximately 100 U.S. contractors will provide aircraft maintenance and logistics support for the F-16 aircraft.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

It is a low collateral damage weapon that can effectively strike both soft and lightly armored targets. APKWS turns a standard unguided 2.75 inch (70 mm) rocket into

a precision laser-guided rocket, classification up to SECRET.

4. The AAR-57A Common Missile Warning System (CMWS) detects energy emitted by threat missile in-flight, evaluates potential false alarm emitters in the environment, declares validity of threat and selects appropriate countermeasures. The CMWS consists of an Electronic Control Unit (ECU), Electro-Optic Missile Sensors (EOMs), and Sequencer and Improved Countermeasures Dispenser (ICMD). Reverse engineering is not a major concern. The ECU hardware is classified CONFIDENTIAL; releasable technical manuals for operation and maintenance are classified SECRET.

5. The AN/ARC-231, Very High Frequency/Ultra High Frequency (VHF/UHF), Line-of-Sight (LOS) Radio with frequency agile modes, Electronic counter-countermeasures (ECCM), UHF Satellite Communications (S ATCOM), Demand Assigned Multiple Access (DAMA), Integrated Waveform (IW), Air Traffic Control (ATC) channel spacing is operator selectable in 5, 8.33, 12.5, and 25kHz steps. The antennas associated with this radio contain sensitive technology.

6. The AN/AVR-2B Laser Detecting Set is a passive laser warning system that receives, processes and displays threat information resulting from aircraft illumination by lasers on multi-functional display. The hardware is classified CONFIDENTIAL; releasable technical manuals for operation and maintenance are classified SECRET.

7. The AN/APR-39A Radar Signal Detecting Set is a system that provides warning of radar directed air defense threat and allows appropriate countermeasures. This is the 1553 databus compatible configuration. The hardware is classified CONFIDENTIAL when programmed with U.S. threat data; releasable technical manual for operation and maintenance are classified CONFIDENTIAL; releasable technical data (technical performance) is classified SECRET.

8. The AN/APX-123A, Identification Friend or Foe (IFF) Transponder, is a space diversity transponder and is installed on various military platforms. When installed in conjunction with platform antennas and the Remote Control Unit (or other appropriate control unit), the transponder provides identification, altitude and surveillance reporting in response to interrogations from airborne, ground-based and/or surface interrogators. This item is contains sensitive technology.

9. The AN/AVS-6 Aviator's Night Vision Goggle is a lightweight binocular that can be mounted to a variety of

aviator helmets. The binocular offers high reliability and performance and enables rotary-wing aviators to conduct and complete night operations during the darkest nights of the year. This item contains sensitive technology.

10. The AN/ARC-201D, Single Channel Ground to Air Radio System (SINCGARS), is a tactical airborne radio subsystem that provides secure, anti-jam voice and data communication. The integration of COMSEC and the Data Rate Adapter (DRA) combines three Line Replaceable Units into one and reduces overall weight of the aircraft. Performance capabilities, ECM/ECCM specification and Engineering Change Orders (ECOs) are classified SECRET.

11. The AN/ARC-220 is a fully digital signal processing (DSP) high-frequency radio that gives you two-way communication over the 2.0000 to 29.9999 MHz high-frequency. The AN/ARC-220 also offers advanced communications features such as embedded Automatic Link Establishment (ALE), serial tone data modem and anti-jam (ECCM) functions that can be used for tactical rotary wing and fixed-wing applications.

12. The AN/ARN-149, Automatic Direction Finder (ADF) Receiver, is a low frequency radio that provides automatic compass bearing on any radio signal within the frequency range of 100 to 2199.5 kHz as well as navigation where a commercial AM broadcast signal is the only available navigation aid.

13. The AN/ARN-153, Tactical Airborne Navigation (TACAN) System, is a full featured navigational system that supports four modes of operation: receive mode; transmit receive mode; air-to-air receive mode; and air-to-air transmit-receive mode. The TACAN provides a minimum 500-watt transmit capability with selecting range ratios of 30:1 or 4:1 which is accomplished through the automatic gain control (AGC) enable/disable switch, the 1553 bus, or the RNAV (ARINC) input bus.

14. The AN/ARN-147, Very High Frequency (VHF) Omni Ranging/Instrument Landing System Receiver, that provides internal MIL-STD-1553B capability and is MIL-E-5400 class II qualified. It meets international operability requirements by providing 50-kHz channel spacing for 160-VOR and 40-localizer/glideslope channels.

15. The KIV-77, a Common IFF Applique Crypto Computer Identification, Friend or Foe (IFF) which maintains the crypto in a separate 3.5 in. x 4.25 in. x 1 in., 16-oz LRU allowing it to be removed and stored. This item is a Controlled Cryptographic Item (CCI).

16. The AN/PYQ-10(C) Simple Key Loader (SKL) is a ruggedized, portable, handheld fill device, for securely receiving, storing, and transferring data between compatible cryptographic and communications equipment. It supports both the DS-101 and DS-102 interfaces, as well as the KSD-64 Crypto Ignition Key and is backward-compatible with existing End Cryptographic Units (ECU) and forward-compatible with future security equipment and systems. This item is classified CONFIDENTIAL.

17. Common Missile Warning System (CMWS) User Data Module (UDM) to support Generation III Electronics Control Unit (ECU). The UDM is a ruggedized, portable, hand-held data storage device for securely receiving, storing, and transferring data between CMWS ECUs (similar to a flash, or "thumb" drive). The UDM itself is UNCLASSIFIED when initially received. However, when loaded with data, it becomes classified to the appropriate level of the data. In the case of CMWS Software, this raises the classification level to SECRET.

18. Common Missile Warning System (CMWS) Classified Software is provided as Country Specific Software required for the operation and support of the Common Missile Warning System (CMWS) AN/AAR-57. The software, once developed and encrypted, is loaded on a User Data Module (UDM) for transfer and use by the Customer. The software is classified SECRET.

19. Operational Mission Data Set (MDS) in support of the AN/APR-39C(V)/4 including Software

Development.
