NUCLEAR REGULATORY COMMISSION

[NRC-2011-0266]

Evaluations of Uranium Recovery Facility Surveys of Radon and Radon Progeny

AGENCY: Nuclear Regulatory Commission.

ACTION: Interim staff guidance; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Interim Staff Guidance (ISG) DUWP-ISG-01, "Evaluations of Uranium Recovery Facility Surveys of Radon and Radon Progeny in Air and Demonstrations of Compliance with 10 CFR 20.1301." This ISG provides guidance to the NRC staff for evaluating uranium recovery (UR) licensee demonstrations of compliance with the public dose limits. This action is necessary because there is insufficient existing guidance on this topic. This action will benefit NRC staff and UR licensees by providing detailed descriptions of methods acceptable to the NRC staff to meet the public dose limit requirement.

DATES: This guidance goes into effect on July 22, 2019.

ADDRESSES: Please refer to Docket ID NRC-2011-0266 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

SUPPLEMENTARY INFORMATION:

I. Discussion

Uranium recovery facility licensees, including in-situ recovery facilities and conventional uranium mills, are required to perform surveys of radiation levels in unrestricted and controlled areas, and to perform surveys of radioactive materials in effluents released to unrestricted and controlled areas to demonstrate compliance with the dose limits for individual members of the public provided in § 20.1301 of title 10 of the *Code of Federal Regulations* (10 CFR). The NRC's regulations in 10 CFR 20.1302 permit the use of alternative approaches to demonstrate compliance with the public dose limits.

This ISG was developed to document the criteria to be used by the NRC to review radon and radon progeny surveys and evaluations of dose to members of the public submitted by licensees under 10 CFR 20.1302 to demonstrate compliance with the NRC's public dose limits of 10 CFR 20.1301. Specifically, this final ISG provides guidance to the NRC staff for reviewing licensee evaluations of doses to members of the public from radon-222 and radon-222 progeny from UR facilities including: (1) Surveys of environmental and effluent radon and radon progeny in air; and (2) radon-related aspects of demonstrations of compliance with the NRC's public dose limits of 10 CFR 20.1301. This ISG also may be used by the NRC in evaluating portions of license applications, renewals, or amendments dealing with radon and radon progeny surveys and compliance. The NRC published an initial draft version of this ISG for public comment on November 21, 2011
