

2019–2020 fishing year off the U.S. West Coast, which begins on July 1. This proposed rule included a 4,514 metric ton (mt) annual catch limit (ACL) and a prohibition on directed commercial fishing for Pacific sardine off the coasts of Washington, Oregon, and California (except for small directed catch and catch of live bait). At the April 2019 Pacific Fishery Management Council (Council) meeting, the Council voted in support of the California Wetfish Producer Association's (CWPA) exempted fishing permit (EFP) application as well as one other application that NMFS is evaluating separately, which both requested an exemption from the prohibition on directed fishing for Pacific sardine. The Council therefore structured the 2019–2020 Pacific sardine harvest specifications so that up to 405 mt (the combined total of the anticipated harvests under the two EFP proposals the Council reviewed) of the ACL could be harvested under EFPs. The CWPA requested to directly harvest up to 400 mt of Pacific sardine for its Coastal Pelagic Species Near-shore Cooperative Survey (CPS–NCS).

Since 2012 the California Department of Fish and Wildlife, in partnership with the CWPA, has been conducting aerial surveys to estimate the biomass and distribution of sardine and certain other CPS species in nearshore waters in the Southern California Bight, and in the Monterey-San Francisco area since the summer of 2017. Currently, there is uncertainty in the biomass estimates from aerial spotter pilots. The CPS–NCS survey associated with the proposed EFP is part of research to quantify that level of uncertainty by capturing CPS schools identified by aerial spotter pilots and validating the biomass and species composition of the schools. A portion of each point set (*i.e.*, an individual haul of fish captured with a purse seine net) will be retained for biological sampling, and the remainder will be sold by the participating fishermen and processors to offset research costs and avoid unnecessary discard. This research contributes to broader efforts to understand CPS biomass in shallow, nearshore areas that NOAA's CPS offshore acoustic trawl survey is unable to access.

If NMFS issues this EFP, the CPS–NCS will survey nearshore waters of the Southern California Bight for 7–10 days between July 1, 2019 and June 30, 2020. Any harvest under this EFP would count against the ACL for Pacific sardine. If NMFS does not issue this EFP, then this 400 mt-portion of the ACL would be available for harvest by other permissible fishing activities.

Authority: 16 U.S.C. 1801 *et seq.*
