SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a new information collection.

NOAA's Office for Coastal Management (OCM) and its regional, state, federal, and non-profit partners have worked closely with coastal managers across the country to develop hazard mitigation and resilience plans. These have ranged from short-term responses to immediate threats to long-term adaptation strategies in response to gradual changes. While there are studies on the costs and benefits of hazard mitigation and adaptation options and various tools to help inform government investments, there is no comprehensive inventory or guide to selecting from applicable funding sources or identifying appropriate financing strategies. The range of funding and financing options, from grants and low-interest loans to more innovative private-public partnerships and emerging bonds, presents an ever-changing and complex array of choices. This diversity of funding and financing mechanisms, however, provides an opportunity for decision-makers to leverage resources to support and advance community resilience.

In many coastal communities, investment in resilience measures remains either non-existent or reactive in response to a catastrophic event. While there are no data on the number of adaptation plans that have been implemented, lack of funding is a frequently cited barrier to implementation. Understanding funding and financing options at the time resilience planning is undertaken, and then incorporating financial strategies into the recommendations, will help ensure that resources are invested wisely, and implementation occurs.

This request is for a set of related interviews to support a broader needs assessment to define the types of funding, financing mechanisms, and associated resources that OCM's state and local coastal manager customers need for coastal resilience activities and a market analysis of existing funding and financing programs and

mechanisms. The interviews will collect relevant information from interviewees on their experiences with coastal resilience funding and financing mechanisms, challenges and opportunities related to funding and financing coastal resilience, and technical support needs and opportunities that OCM can address.

The information provided by interviewees will be synthesized into the needs assessment, which will address needs and information gaps partitioned by region, financial scale, time scale, and scope/sector. The information provided by interviewees will also be used to inform an inventory of existing entities providing resources for resilience funding, as well as a summary of existing and emerging funding sources and financial tools and mechanisms for coastal resilience. Finally, the interviews will inform recommendations on OCM's potential niche in addressing the identified needs and gaps.

II. Method of Collection

Information will be collected during structured telephone interviews.
