Prospective Grant of Exclusive Patent License: Lutetium-177 Radiotherapeutics Against Glioblastoma Multiforme and Small-Cell Lung Carcinoma

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Heart, Lung and Blood Institute (NHLBI), National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an exclusive patent license to Molecular Targeting Technologies, Inc. (MTTI); a Delaware corporation, with its principle place of business in West Chester, Pennsylvania, to practice the inventions embodied in the patent application listed in the Supplementary Information section of this notice.

DATES: Only written comments and/or applications for a license which are received by the NHLBI Office of Technology Transfer and Development August 23, 2019 will be considered.

ADDRESSES: Requests for copies of the patent applications, inquiries, and comments relating to the contemplated exclusive patent license should be directed to: Michael Shmilovich, Esq., Senior Licensing and Patent Manager, 31 Center Drive, Room 4A29, MSC2479, Bethesda, MD 20892-2479, phone number 301-435-5019, or shmilovm@mail.nih.gov.

SUPPLEMENTARY INFORMATION: The following and all continuing U.S. and foreign patents/patent applications thereof are the intellectual properties to be licensed under the prospective agreement to MTTI:

The patent rights in these inventions have been assigned to the Government of the United States of America. The prospective patent license will be granted worldwide and in a field of use not broader than Lutetium-177 radiotherapeutics containing RGD-peptide moieties targeting integrin $\alpha\beta3$ -expressing glioblastoma multiforme and small cell lung cancers.

The invention pertains to a radiotherapeutic against cancers that overexpress integrin $\alpha\beta3$. RGD peptide-

targeted radionuclide therapy directed against tumors that express integrin $\alpha\beta3$ has proven effective for the treatment of advanced, low- to intermediate-grade tumors. The subject radiotherapeutic covered by the patent estate includes an RGD peptide (arginylglycylaspartic acid [Arg-Gly-Asp], linear or cyclical), conjugated to an Evans Blue (EB) analog, and further chelated via DOTA to therapeutic radionuclide ^{177}Lu , a beta emitter. The EB analog reversibly binds to circulating

serum albumin and improves the pharmacokinetics of RGD peptide DOTA conjugated radiotherapeutics and potentially toxicity. The EB analog conjugated has been shown by the inventors to provide reversible albumin binding in vivo and extended half-life in circulation. This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404. The prospective exclusive patent license will be royalty bearing and may be granted unless within fifteen (15) days from the date of this
