SUPPLEMENTARY INFORMATION: Technology description follows.

PET Imaging of fungal infections

Available for licensing and commercial development are patent rights covering a PET imaging method for fungal infections, for example, Aspergillus fumigatus. Currently, there is a lack of imaging agents specific for fungal infections. L-Rhamnose is selectively uptaken by live A. fumigatus. PET imaging experiments showed a 39% increase in uptake by infected mice as opposed to control mice when administered 18F-deoxyrhamnose. As such, the instant imaging agent has potential as a fungal infection diagnostic imaging agent.

Potential Commercial Applications:

- Imaging of live fungal infections
• Imaging of live infections of A. fumigatus

Development Stage:

- Preclinical
• Mouse data
