**Abstract:** The New Source Performance Standards (NSPS) for Commercial and Industrial Solid Waste Incineration Units (aka: CISWI) (40 CFR part 60, subpart CCCC) apply to either owners or operators of a combustion device used to combust commercial and industrial waste, and that meet either of the following two criteria: (1) Began construction either on or after December 31, 1999; or (2) began either reconstruction or modification either on or after June 1, 2001. Commercial and industrial waste is a solid waste combusted in an enclosed device using controlled-flame combustion without energy recovery, which is a distinct operating unit of any commercial or industrial facility, including field-erected, modular, and custom-built incineration units operating with starved or excess air, or solid waste combusted in an air curtain incinerator without energy recovery that is a distinct operating unit of any commercial or industrial facility.

Owners and operators of affected incineration units are required to comply with reporting and record keeping requirements for the General Provisions (40 CFR part 60, subpart A), as well as for the specific requirements at 40 CFR part 60, subpart CCCC. This includes submitting initial notifications, performance tests and periodic reports and results, and maintaining records of

the occurrence and duration of any malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These reports are used by EPA to determine compliance with these standards.

**Form Numbers:** None.

**Respondents/affected entities:** These regulations apply to owners and operators of Commercial and Industrial Solid Waste Incineration (CISWI) units that began construction either on or after December 31, 1999 or began either reconstruction or modification on or after June 1, 2001.

**Respondent's obligation to respond:** Mandatory (40 CFR part 60 subpart CCCC).

**Estimated number of respondents:** 30 (total).

**Abstract:** The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Iron and Steel Foundries (40 CFR part 63 Subpart EEEEE) apply to both existing and new iron and steel foundry facilities that are major sources of hazardous air pollutant (HAP) emissions.

Owners and operators of affected facilities are required to comply with reporting and record keeping requirements for the General Provisions (40 CFR part 63, subpart A), as well as the applicable standards at 40 CFR part 63, subpart EEEEE. This includes submitting initial notifications, performance tests and periodic reports and results, and maintaining records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These reports are used by EPA to determine compliance with these standards.

*Form Numbers:* None.

*Respondents/affected entities:* Iron and steel foundries.

*Respondent's obligation to respond:* Mandatory (40 CFR part 63, subpart EEEEE).

*Estimated number of respondents:* 45 (total).

*Frequency of response:* Initially, semiannually.

*Total estimated burden:* 14,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

*Total estimated cost:* \$1,880,000 (per year), which includes \$246,000 in annualized capital/startup and/or operation & maintenance costs.

*Changes in the Estimates:* There is a decrease in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. This decrease is not due to any program changes. The decrease in burden is an adjustment due to more accurate estimates of existing and anticipated new sources. The estimate of sources is based on Agency analyses conducted during the development the Risk and Technology Review for this subpart. The reduction in sources led to a decrease in burden hours and costs for labor, capital, and operation and maintenance. Activities for existing sources include continuous monitoring of pollutants and the submission of semiannual reports.

*Abstract:* EPA is required under Section 183(e) of the Clean Air Act to regulate Volatile Organic Compound (VOC) emissions from the use of consumer and commercial products. Under regulations promulgated on February 26, 2007 (72 FR 8428) manufacturers of new portable gasoline containers are required to obtain certificates of conformity with the Clean Air Act, effective January 1, 2009. This ICR covers the burdens associated with this certification process. EPA reviews information submitted in a manufacturer's application for certification to determine if the gasoline container design conforms to applicable regulatory requirements and to verify that the required testing has been performed. The certificate holder is required to keep records on the testing and collect and retain warranty and defect information for annual reporting on in-use performance of their products. The respondent must also retain records on the units produced, apply serial numbers to individual containers, and track the serial numbers to their certificates of conformity. Any information submitted for which a claim of confidentiality is made is safeguarded according to EPA regulations at 40 CFR 2.201 *et seq.*
