

originally licensed. Although existing doors protect important equipment from being submerged and damaged, neither regulatory requirements nor enforceable commitments exist that ensure the continued reliability of those doors. The petitioners seek to rectify this safety shortcoming by revising the current licensing basis to include flooding caused by heavy rainfall events.

The NRC staff's assessment dated July 5, 2019, concluded that no further regulatory actions are necessary; therefore, the staff will not revise Pilgrim's current licensing basis to include flooding caused by heavy rainfall events. Had the plant not permanently ceased operations, the staff would have reviewed the March 12, 2012, 10 CFR 50.54(f) reevaluated flood hazard information in accordance with the Commission direction provided in the SRM dated January 24, 2019, and determined whether further regulatory action was warranted.

*Concern 2: Being outside the licensing basis means there are no applicable regulatory requirements. As a direct result, there can be no associated compliance commitments. Being within the current licensing basis invokes a wide array of associated regulatory requirements. For example, 10 CFR part 50, "Domestic Licensing of Production and Utilization Facilities," Appendix B, "Quality Assurance Criteria for Nuclear Power Plants and Fuel Reprocessing Plants," requires that licensees find and fix problems with SSCs having safety functions credited within the current licensing basis.*

The staff concluded in its July 5, 2019, letter that no further response or actions associated with the March 12, 2012, 10 CFR 50.54(f) letter are necessary, and therefore, SSCs relied on to address the reevaluated flood hazard are not required to be safety-related<sup>24</sup> and do not need to meet the quality assurance requirements in 10 CFR part 50, Appendix B. Had the plant not permanently ceased operations, the staff would have reviewed the March 12, 2012, 10 CFR 50.54(f) reevaluated flood hazard information in accordance with the Commission direction provided in the SRM dated January 24, 2019, and determined whether further regulatory action was warranted.

### III. Conclusion

The NRC evaluated the petitioners' concerns and determined that the petitioners' request is addressed through the staff's conclusion as stated in the July 5, 2019, letter and that no further response or actions associated with the March 12, 2012, 10 CFR 50.54(f) letter are necessary for Pilgrim because there is no longer an entity authorized to load fuel into the vessel, and potential fuel-related accident scenarios are limited to the spent fuel pool. Unlike fuel in the reactor, the safety of fuel located in the spent fuel pool is assured for an extended period through maintenance of pool structural integrity, which preserves coolant inventory and maintains margin to prevent criticality. The staff concludes that the small changes in the flooding hazard elevation projected for the two reevaluated flood-

causing scenarios do not threaten the structural integrity of the spent fuel pool.

As provided in 10 CFR 2.206(c), a copy of this director's decision will be filed with the Secretary of the Commission for the Commission to review. The decision will constitute the final action of the Commission 25 days after the date of the decision unless the Commission, on its own motion, institutes a review of the decision within that time.

Dated at Rockville, Maryland, this 25th day of November, 2019.
