possession of a private collector in Fort Madison, IA. After the collector's death in 1994, the human remains were transferred to the Office of the State Archaeologist Bioarchaeology Program. A young adult female is represented by the cranial and dental remains (Burial Project 785). No known individuals were identified. No associated funerary objects are present.

The biological affinity of this individual is uncertain, due to the presence of both Native American and European morphological traits. Cranial metric analysis was confounded by congenital malformation. However, given the presence of some Native American traits, this individual is considered to be Native American.

At an unknown date, human remains representing, at minimum, three individuals were removed from an unknown location in Charleston, Mississippi County, MO. At some point, the human remains came into the possession of a private collector in Fort Madison, IA. After the collector's death in 1994, the human remains were transferred to the Office of the State Archaeologist Bioarchaeology Program. A middle-aged female, an adult male, and a male of indeterminate age are represented by the cranial and dental remains (Burial Project 785). No known individuals were identified. No associated funerary objects are present.

Cranial morphology and cranial metrics analysis indicate these individuals were Native American.

The general locations from which all above mentioned individuals were removed is considered the ancestral homeland of The Osage Nation.

Determinations Made by the Office of the State Archaeologist Bioarchaeology Program

Officials of the Office of the State Archaeologist Bioarchaeology Program have determined that:

• Pursuant to 25 U.S.C. 3001(9), the human remains described in this notice represent the physical remains of four individuals of Native American ancestry.
