

(Amtrak) petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 238. FRA assigned the petition Docket Number FRA–2019–0096.

Specifically, Amtrak has petitioned FRA for a waiver from the requirements of 49 CFR 238.111(a), pre-revenue service acceptance testing, for Siemens Charger locomotives, ALC–42 variants included, to operate across the entirety of Amtrak’s operating network. Following FRA’s correspondence to Amtrak dated May 16, 2019, Amtrak began to perform a select number of SC–44 Charger performance tests on several long-distance network routes. Results have been generally positive thus far with a low number of correctional recommendations sent back to the Original Equipment Manufacturer (OEM). Amtrak intends to perform additional SC–44 testing in 2020 to further validate the Charger platform in a long-distance environment prior to receiving ALC–42 deliveries.

Since the receipt of FRA’s May 16, 2019 correspondence, Amtrak has also provided to FRA the entirety of the design documentation received to date from Siemens for the ALC–42 procurement. Most of these ALC–42 preliminary design review documents are the SC–44 final design documents. These include designs of the suspension system, wheel profile, crash energy management, fuel tank, and other car body drawings. Further, no changes to the dimensions or car body profile of the locomotive will vary between the ALC–42 or the SC–44. The ALC–42 will have a minimal (<0.5%) empty weight variance due to different internal components such as head-end power (HEP) transformer and cab signal, and a minimal (<2.0%) loaded gross weight variance due to increased fuel/diesel exhaust fluid (DEF)/sand capacity than the SC–44. Amtrak states these small weight variances reside below the floor and therefore should have negligible effect from low center of gravity. The other notable differences between the two platform versions will reside within the cab (additional positive train control systems, screen interfaces) and inside the engine room (different fuel filtration, HEP inverter, brake grid, etc.).

Based on the above and the Charger platform testing that has been performed to date, Amtrak requests a waiver from the requirements of 49 CFR 238.111(a) testing for Siemens Charger locomotives, ALC–42 variants included.

[Docket Number FRA–2019–0106]

Petition for Waiver of Compliance

Under part 211 of title 49 Code of Federal Regulations (CFR), this document provides the public notice that on December 4, 2019, Caltrain petitioned the Federal Railroad Administration (FRA) for a waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR part 238, Passenger Equipment Safety Standards. FRA assigned the petition Docket Number FRA–2019–0106.

Specifically, Caltrain seeks a waiver of compliance from portions of 49 CFR 238.131(a)(1) for its new six-car Stadler Electric Multiple Unit (EMU) trainsets currently under construction. The Federal regulation incorporates American Public Transportation Association (APTA) Standard PR–M–S–18–10, *Standard for Powered Exterior Side Door System Design for New Passenger Cars*, first published February 11, 2011, by reference. Section 2.9.1 of this standard, *Design Construction*, paragraph 6 states: “Neither shall the emergency release mechanism require the presence of any interlock signals (e.g. “low speed” or “zero speed” signals) for actuation. When actuated, the emergency release mechanism shall override any locks, and it shall be possible to manually open the released door with a force not to exceed 35 lbf.” The petition states, “for safety reasons, Caltrain would like to introduce a speed interlock to the door emergency release system.”
