

1. *Project Description:* Cherokee Falls Project consists of: (1) A 1,819-foot-long granite masonry dam with a 1,701-foot-long spillway and 4-foot-high flashboards; (2) ten low level outlet pipes along the middle portion of dam, four of which are at least partially open and used to provide a continuous minimum flow to the bypassed reach; (3) a reservoir with a surface area of 83 acres and a storage capacity of 140 acre-feet; (4) a trash rack intake with 3.5 inch spacing between the bars; (5) a 130-foot-long, 40-foot-wide powerhouse containing one generating unit with a capacity of 4,140 kilowatts and an annual generation of 9,354.9 megawatt-hours; (6) a 150-foot-long tailrace; (7) 93-foot-long generator lines leading to three 500 kilovolt transformers and (8) a 200-foot-long transmission line to a point of interconnection with the grid.

The project is operated in a run-of-river mode with a continuous, minimum flow of 97 to 270 cubic feet per second (cfs) supplied to the bypassed reach. The current license requires a minimum flow of 65 cfs. Project operation starts when inflows exceed the sum of the minimum hydraulic capacity of the turbine (600 cfs) and the minimum flow supplied to the bypassed reach. All flows greater than the sum of the maximum hydraulic capacity of the turbine (3,100 cfs) and the bypassed reach minimum flow, are passed over the spillway.
