Background

Del Puerto Water District (DPWD), in partnership with the San Joaquin River Exchange Contractors Water Authority (SJRECWA), proposes to construct a reservoir located on Del Puerto Creek in the foothills of the Coast Range Mountains west of Patterson, California and Interstate 5. The Del Puerto Canyon Reservoir Project (Project) is a State-led effort under the Water Infrastructure Improvements for the Nation Act (WIIN Act) Public Law 114–322, Sec. 4007. The proposed reservoir would provide approximately 82,000 acre-feet (AF) of locally owned off-stream storage south of the Sacramento-San Joaquin Delta. The purpose of the proposed Project is to develop additional South of Delta water storage to maximize the management and efficient use of existing water supplies in both DPWD and the SJRECWA service areas and to serve environmental purposes, including water supply for wildlife refuges designated under the Central Valley Project Improvement Act. Water would be conveyed from the Delta-Mendota Canal (DMC) to be stored in the proposed reservoir and later discharged back into the DMC. The proposed Project includes construction of a main dam, three saddle dams, a spillway, inlet/outlet works, conveyance facilities (including a diversion facility on the DMC, a pumping plant, underground pipeline and energy dissipation facilities at the DMC outfall, along with related appurtenant components), and electrical facilities (power supply line and electrical substation). The proposed Project also includes relocating existing and proposed utilities that run north-south through the Project area and the relocation of Del Puerto Canyon Road, which runs east-west through the Project area.

The Project sponsors developed an Environmental Impact Report (EIR) pursuant to the California Environmental Quality Act for the Project and released that EIR for public review on December 12, 2019. The review period ended January 27, 2020.

Effects to many of the resources discussed in the EIR were mitigated to less-than-significant levels, though there were significant and unavoidable effects remaining after mitigation.

Reclamation's action would be to fund up to 25 percent of total project costs pursuant to the WIIN Act, proportional to the Federal benefits developed. Reclamation will use much of the analysis and evaluate the alternatives presented in the EIR. Additional information will be developed in the EIS with respect to several resources, including energy use, traffic and transportation, air quality, biological resources, cultural resources, and Central Valley Project operations. Agencies and the public are encouraged to review the EIR provided at <https://www.delpuertocanyonreservoir.com>, and provide input regarding potentially significant issues to be addressed, or to identify potential alternatives that would meet the purpose of the Project.
