SUPPLEMENTARY INFORMATION: The Massachusetts Division of Marine Fisheries (MA DMF) submitted a complete renewal application for an Exempted Fishing Permit (EFP) to conduct a lobster abundance survey that Federal regulations would otherwise restrict. The purpose of this study is to provide fishery-independent data on lobster growth and abundance in Massachusetts state waters of statistical areas 514 and 538.

This survey has occurred annually since 2006 in Massachusetts state waters. On average, 15,604 lobsters per year were sampled from 2007–2016. The EFP would authorize the six participating vessels to deploy three standard and three ventless traps per six-pot trawl. Stations would be sampled twice per month from June through October 2020. Sampling trips would occur after a soak time of 3 to 5 days and at least one MA DMF scientist would be on board for the sampling trips. MA DMF personnel would not be on board when traps are baited and deployed. All gear would be Atlantic Large Whale Take Reduction Plan compliant. Survey traps will be separate from each vessel's commercial lobster traps and would be tagged as, "MADMF Research Traps."

All catch during sampling trips would be retained temporarily to collect biological data. MA DMF staff may collect lobster and/or Jonah crab, including undersized, oversized, v-notched, and egg-bearing lobsters. Collected samples would be used for research projects on growth and maturity. No catch from the experimental trips would be landed for sale.

If approved, MA DMF may request minor modifications and extensions to the EFP throughout the study. EFP modifications and extensions may be granted without further notice if they are deemed essential to facilitate

completion of the proposed research and have minimal impacts that do not change the scope or impact of the initially approved EFP request. Any fishing activity conducted outside the scope of the exempted fishing activity would be prohibited.
