n. *Project Description*: The Phoenix Project consists of: (1) A 535-foot-long and 132-foot-high concrete arch dam on the South Fork Stanislaus River, (2) a 172.3 acre reservoir, (3) a 133.1-foot-long and 20-foot-high concrete arch cushion dam, (4) a 15.38-mile-long Main Tuolumne Canal (MTC), (5) a Header Box (forebay), a 5,611-foot-long penstock, and a powerhouse with an impulse turbine rated at 1.6 megawatts.

PG&E operates the project for power generation and to meet Tuolumne Utility Districts (TUD) water supply needs. The water supply for TUD is delivered on a continuous basis to points along the MTC and downstream of the Phoenix Powerhouse. A 1983 Water Supply Agreement provides for TUD to receive water via the MTC during spill and non-spill conditions. During non-spill conditions, PG&E coordinates water deliveries with TUD to meet their demands and during spill conditions, PG&E operates the project to maximize generation, but is still obligated to provide water to TUD and to release the required minimum flows in the South Fork Stanislaus River.

PG&E is proposing to modify the existing project boundary to encompass all facilities necessary for operation and maintenance of the project. PG&E proposes to include many roads and trails within the project boundary (FLA, Volume III, Section 1.2.1.1), and adjust the boundary around Lyons Reservoir, along the Main Tuolumne Canal and several of its spill channels, and along the penstock. With these proposed changes, the area of land within the project boundary will increase for Bureau of Land Management lands to 1.55 acres, National Forest Lands to 29.78 acres, and private lands to 101.16

acres, and decrease for PG&E lands to 216.01 acres.

PG&E proposes to classify water years into five classifications based on unimpaired inflow into New Melones Reservoir: Critically Dry, Dry, Normal-Dry, Normal- Wet, and Wet Water Year (WY) types. The water years in the existing license are classified as either Dry or Normal.

PG&E also proposes to modify minimum instream flow release requirements from Lyons Dam to the South Fork Stanislaus River by WY type as depicted in Table 3.2–18 in Volume III of the application, and to modify the ramping rate requirement below Lyons Dam (limiting the maximum rate of change in river flow not to exceed 50 percent of the existing flow per hour and provide an end of spill ramping rate) to provide for slower recession rates from spills in summer, while maintaining water supply for TUD.

PG&E further proposes the following plans to protect and enhance environmental resources: (1) Spill Channel Erosion Evaluation and Mitigation Plan; (2) Streamflow and Reservoir Level Gaging Plan; (3) Vegetation and Integrated Pest Management Plan; (4) Wildlife Resources Plan; (5) Erosion Control Plan; (6) Hazardous Materials Management Plan; (7) Fire Prevention and Response Plan; (8) Project Roads and Trails Plan; (9) Recreation Plan; and (10) Historic Properties Management Plan.
