

- EP1 is the dual compressor energy expended during the first part of the test (If at least one compressor cycles, the test period for the first part of the test shall include a whole number of complete primary compressor cycles comprising at least 24 hours of stable operation, unless a defrost occurs prior to completion of 24 hours of stable operation, in which case the first part of the test shall include a whole number of complete primary compressor cycles comprising at least 18 hours of stable operation);
- T1 is the length of time for EP1 (minutes);
- D is the total number of compartments with distinct defrost systems;
- i is the variable that can equal to 1, 2 or more that identifies the compartment with distinct defrost system;
- EP2_i is the total energy consumed during the second (defrost) part of the test being conducted for compartment i. (kWh);
- T2_i is the length of time (minutes) for the second (defrost) part of the test being conducted for compartment i.
- 12 = conversion factor to adjust for a 50% run-time of the compressor in hours/day
- CT_i is the compressor-on time between defrosts for only compartment i. CT_i for compartment i with long time automatic defrost system is calculated as per 10 CFR part 430, subpart B, Appendix A clause 5.2.1.2. CT_i for compartment i with variable defrost system is calculated as per 10 CFR part 430 subpart B, Appendix A clause 5.2.1.3. (hours rounded to the nearest tenth of an hour).

Stabilization: The test shall start after a minimum 24 hours stabilization run for each temperature control setting.

Test Period for EP2_i, T2_i; EP2_i includes precool, defrost, and recovery time for compartment i, as well as sufficient dual compressor cycles to allow T2_i to be at least 24 hours, unless a defrost occurs prior to completion of 24 hours, in which case the second part of the test shall include a whole number of complete primary compressor cycles comprising at least 18 hours. The test period shall start at the end of a regular freezer compressor on-cycle after the previous defrost occurrence (refrigerator or freezer). The test period also includes the target defrost and following freezer compressor cycles, ending at the end of a freezer compressor on-cycle before the next defrost occurrence (refrigerator or freezer).

Test Measurement Frequency: Measurements shall be taken at regular intervals not exceeding 1 minute.
