FRA anticipates being able to resolve this rulemaking without a public, oral hearing. However, if FRA receives a specific request for a public, oral hearing prior to January 11, 2021, one will be scheduled and FRA will publish a supplemental notice in the **Federal Register** to inform interested parties of the date, time, and location of any such hearing.

**SUPPLEMENTARY INFORMATION:**

#### I. Executive Summary

To streamline and update existing rules, agencies periodically review and propose amendments to their regulations. Various statutes and Executive Orders also encourage or require such review with an emphasis on cost-savings. See, e.g., 5 U.S.C. 610; Executive Order 13771, *Reducing Regulation and Controlling Regulatory Costs*, 82 FR 9339, Jan. 30, 2017.

Increasingly, the railroad industry has also petitioned FRA to amend its safety regulations to acknowledge and reflect technological innovations that improve operational efficiencies. Within this context, FRA reviewed its 49 CFR part 214—Railroad Workplace Safety regulations. FRA identified potential amendments to subparts C and D of part 214 addressing Roadway Worker Protection and On-Track Roadway Maintenance Machines and Hi-Rail Vehicles, respectively, that would lead to operational efficiencies and cost-savings. FRA expects these amendments can be implemented without compromising safety. Accordingly, FRA is proposing to amend § 214.322 to allow the use of alternative security standards for electronic display systems to view track authority information, and amend § 214.505 to exempt certain drone roadway maintenance machines from environmental control requirements. FRA expects that these proposals would reduce regulatory burdens on the railroad industry without impacting safety.

FRA estimates that railroads would experience approximately \$5,900 in cost savings over the ten-year period of this analysis. The present value (PV)<sup>1</sup> of this

<sup>1</sup> The present value of costs and cost savings flows are calculated in this analysis (over a 10-year period) because PV provides a way of converting future amounts into equivalent dollars today. The formula used to calculate these flows is:  $1/(1+r)^t$ , where “r” is the discount rate, and “t” is the year. Discount rates of 3 and 7 percent are used in this analysis.
