

CPSC may conduct research, studies, and investigations on the safety of consumer products, or test consumer products and develop product safety test methods and testing devices.

In 2019, the CPSC published the 2019 Nursery Product Annual Report, which reported injuries and deaths associated with nursery products among children younger than age 5.¹ That report identified 320 deaths related to nursery products from 2014 through 2016. Infant sleep products were associated with the most deaths: cribs/mattresses (33%), cradles/bassinets (18%), and playpens/play yards (20%). Also, in 2019, CPSC conducted a focus group of 48 participants to gather feedback from parents and grandparents (caregivers) on their beliefs, experience, and perceptions about infant sleeping practices and caregivers' compliance with safety messaging on nursery products. Caregiver responses in the focus group study indicated limited adherence to infant sleep safety warning messaging.² Some of the reasons for lack of adherence to safety warnings include caregiver perceptions that warning labels contain repetitive, non-specific information that fails to target the safety hazard. Additionally, caregivers are inundated with safety messaging that changes constantly, resulting in ambiguity about what messages are most relevant and current. Product marketing and the proliferation of new products may confuse caregivers as well. Caregivers often end up listening to friends and family, or relying on past experience, to decide what behaviors are safe for their child, rather than following the current guidelines recommended by experts. If caregivers are not attuned to the safety messaging on new products, they are more likely to use the products incorrectly.

Accordingly, CPSC seeks to learn more about consumers' understanding of specific warning labels related to products that may be used as a sleeping environment for infants and how those labels influence caregivers' behavior. In the proposed information collection, CPSC seeks to survey 650 caregivers to obtain information regarding the gap in consumer knowledge about product warning labels and consumer adherence to, and behaviors associated with, warning labels. The online survey will be conducted with caregivers age 18 and above, who are a parent or grandparent

with a child/grandchild between 2 months to 11 months old.

CPSC has contracted with Fors Marsh Group, LLC, to develop and execute this project for CPSC. If CPSC can obtain information about caregiver perceptions and comprehension of warning label language through the survey, CPSC will be able to identify better which types of safety warning labels and safety messaging are unclear to the target audience, and that potentially serve as a barrier to safe sleep. Information obtained through this survey is not intended to be considered nationally representative. CPSC intends to use findings from this survey, in conjunction with findings from other research and activities, to assist with providing recommendations for refining and enhancing warning labels in the future.

B. Burden Hours

We estimate the number of respondents to the survey to be 650. The online survey for the proposed study will take approximately 15 minutes (0.25 hours) to complete. We estimate the total annual burden hours for respondents to be 162.50 hours. The monetized hourly cost is \$36.22, as defined by total compensation for all civilian workers, U.S. Bureau of Labor Statistics, Employer Costs for Employee Compensation, as of March 2020. Accordingly, we estimate the total cost burden to be \$5,885.75 (162.50 hours multi; \$36.22). The total cost to the federal government for the contract to design and conduct the proposed survey is \$150,987.

C. Request for Comments

CPSC invites comments on these topics:

- Whether the proposed collection of information is necessary for the proper performance of CPSC's functions, including whether the information will have practical utility;
- The accuracy of CPSC's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques,

when appropriate, and other forms of information technology.
