SUPPLEMENTARY INFORMATION: *Title:* Conservation Auction Behavior: Effects of Default Offers and Score Updating.

OMB Number: To be assigned by OMB.

Expiration Date: Three years from approval date.

Type of Request: New information collection.

Abstract: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104-12) and OMB regulations at 5 CFR part 1320 (60 FR 44978, August 29, 1995), this notice announces USDA Economic Research Services' intention to request approval from the Office of Management and Budget (OMB) for a new data collection effort.

This data collection will use an online simulated auction experiment with former participants in the USDA Conservation Reserve Program (CRP) general signup and university students to (1) study the anchoring effect of using a high-scoring default offer in the CRP enrollment software rather than an active-choice default, and (2) study how the timing of information about final ranking score in the software influences responsive to baseline ranking scores. Outputs for the experiment will be used to inform potential updates to the CRP software and enrollment software as well as future lab experiments on general conservation auctions.

USDA's Conservation Reserve Program (CRP) enrolls environmentally sensitive cropland in long-term contracts. Enrolled landowners receive annual rental payments for establishing the approved conservation vegetative cover and not farming the land. Most land is enrolled through the CRP General Signup, a multi-unit, sealed-bid, reverse auction. Offers are ranked on both quality and price. Participants can increase the probability that their offer is accepted by agreeing to a higher quality conservation cover practice or lowering their asking price (annual payment). By encouraging better practices and lower payments, the auction design improves the cost effectiveness of the CRP.
