

2019 NDAA (Pub. L. 115–232) amended the MMPA to allow incidental take regulations for military readiness activities to be issued for up to seven years.

Summary of Request

On October 9, 2020, NMFS received an adequate and complete application from the Navy requesting authorization for take of marine mammals, by Level A and Level B harassment incidental to training (categorized as military readiness activities) from the use of active sonar and other transducers and explosives (occurring at or near the surface of the water) in the TMAA Study Area. The requested regulations would be valid for seven years, from 2022 through 2029.

This will be the third time NMFS has promulgated incidental take regulations pursuant to the MMPA relating to similar military readiness activities in the GOA TMAA, following those effective from May 4, 2011 to May 4, 2016 (76 FR 25479; May 4, 2011) and from April 26, 2017 to April 26, 2022 (82 FR 19530; April 27, 2017).

Description of the Specified Activity

The TMAA Study Area is a temporary area established in conjunction with the Federal Aviation Administration that is a surface, undersea space, and airspace maneuver area within the GOA for ships, submarines, and aircraft to conduct required training activities. As depicted in Figure 1–1 of the Navy's application, the TMAA is a polygon roughly resembling a rectangle oriented from northwest to southeast, approximately 300 nautical miles (nmi) (556 kilometers [km]) in length by 150 nmi (278 km) in width, located south of Montague Island and east of Kodiak Island.

The following types of training activities and exercises, which are classified as military readiness activities pursuant to section 315(f) of Public Law 101–314 (16 U.S.C. 703), are included in the specified activity described in the Navy's application: Air warfare, surface warfare, anti-submarine warfare (ASW), electronic warfare, Naval Special Warfare, strike warfare, and support operations.

The Navy's application includes proposed mitigation measures for marine mammals that would be implemented during training activities in the TMAA Study Area (see Section 11 of the Navy's application). Proposed procedural mitigation measures and geographic mitigation areas generally include: (1) The use of Lookouts to observe for biological resources and communicate the need for mitigation

implementation; (2) powerdowns, shutdowns, and delay of starts to avoid exposure of marine mammals to high levels of sound or explosive blasts more likely to result in injury or more serious behavioral disruption; and (3) limiting the use of active sonar or explosives in certain biologically important areas to reduce the probability or severity of impacts when they are more likely to contribute to fitness impacts (see Figure 11–1 of the Navy's application).

The Navy also proposes to undertake monitoring and reporting efforts to track compliance with incidental take authorizations and to help investigate the effectiveness of implemented mitigation measures in the TMAA Study Area. This includes Adaptive Management, the Integrated Comprehensive Monitoring Program, the Strategic Planning Process, and Annual Monitoring and Activity Reports. As an example, under the Integrated Comprehensive Monitoring Program, the monitoring relating to the effects of Navy training activities on protected marine species are designed to increase the understanding of the likely occurrence of marine mammals in the vicinity of the action (*i.e.*, presence, abundance, distribution, and density of species) and to increase the understanding of the nature, scope, or context of the likely exposure of marine mammals to any of the potential stressors associated with the action.

Information Solicited

Interested persons may submit information, suggestions, and comments concerning the Navy's request (see ADDRESSES). NMFS will consider all information, suggestions, and comments related to the request during the development of proposed regulations governing the incidental taking of marine mammals by the Navy, if appropriate.
