All filings must clearly identify the project name and docket number on the first page: Cocheco Falls Dam Project (P-4718-039).

m. The application is not ready for environmental analysis at this time.

n. *Project Description:* The existing Cocheco Falls Dam Project consists of: (1) A 150-foot-long, 13.5-foot-high stone masonry arch dam that includes the following sections: (a) A left abutment section; (b) a 140-foot-long spillway section with 24-inch-high flashboards, a 5-foot-wide, 10-foot-high low-level outlet gate, and a crest elevation of 37.0 feet mean sea level (msl) at the top of the flashboards; and (c) a right abutment section with a debris sluice gate; (2) a 20-acre impoundment with a storage capacity of 150 acre-feet at an elevation of 37.0 feet msl; (3) a 64-foot-wide, 10-foot-high intake structure equipped with a trashrack with 1-inch clear bar spacing; (4) an 8.5-foot-diameter, 184-foot-long gated steel penstock that trifurcates into three 5-foot-diameter, 8-foot-long sections, each controlled by a 5-foot-diameter butterfly valve; (5) a 40-foot-long, 40-foot-wide concrete and brick masonry powerhouse containing three 238-kilowatt (kW) vertical Flygt submersible turbine-generator units for a total installed capacity of 714 kW; (6) a 40-foot-long, 40-foot-wide tailrace that discharges into the Cocheco River; (7) a 1,000-foot-long, 34.5-kilovolt (kV) underground transmission line and a 34.5-kV transformer that connects the

project to the local utility distribution system; and (8) appurtenant facilities.

Cocheco Falls Associates voluntarily operates the project in a run-of-river mode using an automatic pond level control system to regulate turbine operation, such that outflow from the project approximates inflow. The project creates an approximately 100-foot-long bypassed reach of the Cocheco River.

Downstream fish passage is provided by a bypass facility located on the left side of the dam and consist of a 5.6-foot-wide, 7-foot-long fish collection box, a trashrack with 6-inch clear bar spacing, and a 24-inch-diameter PVC fish passage pipe. Upstream fish passage is provided by a Denil fish ladder located on the right side of the dam.

The current license requires the release of: (1) 20 cubic feet per second (cfs) from the upstream fish passage facility from April 15 until June 30; (2) 20 cfs through the trash sluiceway from April 15 until June 15, to attract anadromous fish to the fish ladder; and (3) 20 cfs through the downstream fish passage facility from April 15 until ice forms on the river. The average annual generation of the project is approximately 3,000 megawatt-hours.

Cocheco Falls Associates proposes to: (1) Continue to operate the project in a run-of-river mode; (2) continue to facilitate upstream and downstream fish passage by providing the minimum flows required by the current license; (3) design and install an upstream eel passage facility at the Denil fish ladder location within 4 years of the effective date of a subsequent license; and (4) consult with the New Hampshire State Historic Preservation Officer before beginning any land-disturbing activities or alterations to known historic structures within the project boundary.
