

- *Lack of consistency for what supplies to include in an emergency supply kit:* While the public can access information on what contents are likely important to include in emergency supply kits, there is a lack of information as to whether there is a standard set of supplies that is consistently needed across disaster types
- *Lack of a standard tool for evaluation of emergency supply kit use and effectiveness*
- *Lack of information on how emergency supply kit items are used during or following disasters:* Currently we lack detailed information on how households use emergency supply kit items during or following disasters and what, if any, are barriers to their use
- *Lack of information on effectiveness of emergency supply kits in preventing adverse outcomes:* To our knowledge, there is no information on whether the use of emergency supply items prevents adverse health outcomes. Among individuals with

health conditions, it remains unclear whether preparing an emergency supply kit with adequate medications and medical supplies prevents the worsening of conditions or the need for emergency medical services

- *Lack of data to support emergency supply kit recommendations:* It is unclear whether having essential supplies improves self-sufficiency and lessens the need for outside assistance

This general lack of research on the efficacy and use of emergency supply kits impedes our ability to make data-driven recommendations regarding emergency supply kit promotion. The cross-sectional disaster survey and focus group(s) on the public’s knowledge, preparedness, and use of emergency supply kits will identify and inform public health officials about the most useful items to include in an emergency supply kit, ideally across two different types of disasters.

Survey participants will be selected via address-based sampling in the

defined geographic area impacted by the disaster and given the choice to complete the survey via paper (*i.e.*, Teleform) or online via a web-based instrument. Survey participants will also be recruited using an existing, nonprobability web panel and be directed to the online, web-based instrument to create a larger, more cost-effective dataset. Focus group participants will be randomly selected among survey respondents and/or recruited via targeted social media (*e.g.*, Facebook, Craigslist) to provide context and enhancement to the survey.

The estimated annualized burden is 384 hours. The estimated burden is based on conducting the survey at one site per year, taking 15 minutes per respondent via the web or 30 minutes via paper survey, and up to two focus groups in each site taking approximately five minutes for the focus group screener and two hours for the focus group. There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
General public .....	Web survey .....	667	1	15/60
	Paper survey .....	333	1	30/60
	Focus group screener .....	24	1	5/60
	Focus group .....	24	1	2

[30 Day-21-200S]

**Agency Forms Undergoing Paperwork Reduction Act Review**

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled “COVID-19 Pandemic Response, Laboratory Data Reporting” to the Office of Management and Budget (OMB) for review and approval. CDC previously published a “Proposed Data Collection Submitted

for Public Comment and Recommendations” notice on June 5th, 2020 to obtain comments from the public and affected agencies. CDC received two comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639-7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to [www.reginfo.gov/public/do/PRAMain](http://www.reginfo.gov/public/do/PRAMain). Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th

Street NW, Washington, DC 20503 or by fax to (202) 395-5806. Provide written comments within 30 days of notice publication.

**Proposed Project**

COVID-19 Pandemic Response, Laboratory Data Reporting—New—National Center for Emerging and Zoonotic Infectious Diseases (NCEZID), Centers for Disease Control and Prevention (CDC).

*Background and Brief Description*

Efforts are underway to ensure that laboratory data—including diagnostic viral testing data and serologic testing data—are comprehensive and readily available from laboratories and other facilities providing testing, including point-of-care (POC) testing sites for the public health response to SARS-CoV-2 and COVID-19.

Ensuring a rapid and thorough public health response to the COVID-19 pandemic necessitates comprehensive laboratory testing data. These data

contribute to understanding disease incidence and trends: Initiating epidemiologic case investigations, assisting with contact tracing, assessing availability and use of testing resources, and identifying supply chain issues for reagents and other material. Laboratory testing data, in conjunction with case reports and other data, also provide vital guidance for mitigation and control activities. The total estimated annualized burden is 65,936 hours. There are no costs to respondents other than their time.

**ESTIMATED ANNUALIZED BURDEN HOURS**

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
State epidemiologist or informatics staff.	CDC-provided CSV file or HL7 messages .....	54	180	1
	CDC-provided CSV file or HL7 messages (retrospective data entry).	54	1	4

**Proposed Project**

Medical Monitoring Project Facility Survey—New—National Center for HIV/AIDS, Viral Hepatitis, STD, and TB Prevention (NCHHSTP), Centers for Disease Control and Prevention (CDC).

*Background and Brief Description*

The Centers for Disease Control and Prevention requests a one year approval for a new information collection, “Medical Monitoring Project (MMP) Facility Survey.” The primary objective of the MMP Facility Survey will be to conduct a one-time survey of the characteristics of HIV care facilities in order to collect information on the nation’s existing HIV care infrastructure and the capacity of facilities to implement the strategies of the U.S. Ending the HIV Epidemic federal initiative. CDC will also use the findings to guide national and local HIV prevention and care efforts and identify gaps as part of the Division of HIV/AIDS Prevention’s Strategic Plan. Specifically, information is needed about the capacity of care facilities to deliver care and prevention services, provide HIV prevention messaging, partner with public health programs, offer services for HIV negative partners of HIV positive persons, engage and retain patients, offer PrEP, medication-assisted therapy (MAT), and substance use
