Title of the Collection: Access, Exchange and Use of Social Determinants of Health Data in Clinical Notes.

Type of Collection: New.
OMB No.: 0955-NEW—Office of the National Coordinator for Health Information Technology.

Abstract: The Department of Health and Human Services, Office of the Secretary, Office of the National Coordinator for Health Information Technology, have the access, exchange, and use of electronic health information; which is essential for clinicians, and patients to better manage their health care needs and share information with other providers, and with caregivers. Many hospitals and physicians possess capabilities that

enable patients to view and download their health information. Yet, additional steps are needed to make health information more accessible and useful to both clinicians and patients.

The 21st Century Cures Act (Cures Act) requires the Department of Health and Human Services (HHS) and ONC to improve the interoperability of health information. ONC's Cures Act final rule also identifies important data elements that should be made electronically available and exchanged through the use of health information technology (IT). The United States Core Data for Interoperability (USCDI) is a standardized set of health data classes and constituent data elements for nationwide, interoperable health information exchange. ONC will follow a predictable, transparent, and collaborative process to expand the USCDI. Data reflecting social determinants of health (SDOH)—the conditions in which people live, learn, work, and play—remains much more limited across healthcare. There is a growing recognition that by capturing and accessing SDOH data during the course of care, providers can more easily address non-clinical factors, such as food, housing, and transportation insecurities, which can have a profound impact on a person's overall health. Therefore, it is important to identify SDOH data elements for potential inclusion in the USCDI in the future.
