If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

**II. Additional Information**

The NRC is issuing for public comment a DG in the NRC’s “Regulatory Guide” series. This series was developed to describe and make available to the public information regarding methods that are acceptable to the NRC staff for implementing specific parts of the NRC’s regulations, techniques that the staff uses in evaluating specific issues or postulated events, and data that the staff needs in its review of applications for permits and licenses.

The DG, entitled “Emergency Response Planning and Preparedness for Nuclear Power Reactors,” is temporarily identified by its task number, DG–1357 (ADAMS Accession No. ML21007A330). The staff is also issuing for public comment a draft regulatory analysis (ADAMS Accession No. ML21004A168). The staff develops a regulatory analysis to assess the value of issuing or revising a regulatory guide as well as alternative courses of action

The staff would issue Revision 6 of RG 1.101 to endorse and update guidance that is available to licensees and applicants on methods acceptable to the NRC staff for complying with the NRC’s regulations for emergency response plans and preparedness at nuclear power reactors. This DG is for light water reactors, including those of an advanced design (*e.g.*, AP1000); small modular reactors and other new technologies will have design-specific RGs to support development of their emergency plans. This proposed revision endorses Revision 0 of the NEI white paper, “Implementing a 24-Month Frequency for Emergency Preparedness Program Reviews,” issued November 2019. This proposed revision also includes guidance found in previous revisions of RG 1.101, updated NRC guidance documents, and other documents previously endorsed by the NRC to consolidate the list of these guidance documents into a single revision of the RG.

### III. Backfitting, Forward Fitting, and Issue Finality

DG–1357, if finalized, would revise RG 1.101, Revision 6, which describes methods acceptable to the NRC staff for complying with the NRC’s regulations to meet the regulatory requirements for emergency response planning and preparedness. Issuance of DG–1357, if finalized, would not constitute backfitting as defined in section 50.109 of the *Code of Federal Regulation* (10 CFR), “Backfitting,” and as described in NRC Management Directive (MD) 8.4, “Management of Backfitting, Forward Fitting, Issue Finality, and Information Requests”; constitute forward fitting as that term is defined and described in MD 8.4; or affect the issue finality of any approval issued under 10 CFR part 52, “Licenses, certifications, and approvals for nuclear power plants.” As explained in DG–1357, applicants and licensees would not be required to comply with the positions set forth in DG–1357.

Dated: March 12, 2021.

For the Nuclear Regulatory Commission.
