

Method of Sale (MOS) and the Uniform Fuels and Automotive Lubricants Regulation (FLR):

Item Block (B1)—NIST HB 130, PAL–19.1. UPLR, Sec. 2.8. Multiunit Package. NET–19.2. NIST HB 133

Modify “scope” for Chapters 2 through 4, add a note following Sections 2.3.7.1. and 2.7.3., NET–19.3. and create a Chapter 5. Specialized Test Procedures in NIST HB 133. The L&R Committee will also be addressing a proposal to include adoption of a test procedure for the total quantity declaration on multiunit or variety packages. In addition, in NIST HB 130, Uniform Packaging and Labeling Regulation, the proposal would clarify Section 2.8. Multiunit.

Item MOS–20.5 Section 2.21 Liquefied Petroleum Gas

The L&R Committee will consider a proposal to modify the existing language for the method of sale of Liquefied Petroleum Gas. The language was changed during the NCEM Interim Meeting and is a Voting Item. Recommended changes to the existing language reference a value of “15.6 °C” for temperature determinations in metric units. According to the current industry practice for sales of petroleum products, the reference temperature for sales in metric are based on 15 °C rather than the exact conversion from 60 °F (which is 15.6 °C). Thus, the temperature reference in metric should be 15 °C.

Item—FLR–20.5 Section 2.1.2.(a) Gasoline-Ethanol Blends

The L&R Committee will consider a proposal to modify the existing NIST HB130 FLR, Sec. 2.1.2.(a) Gasoline-Ethanol Blends to include a statement to clarify the maximum vapor pressure limits by more than 1.0 psi for blends “containing at least 9 and not more than 15 vol % ethanol” from June 1 through September 15 as allowed by EPA 40 CFR 80.27(d).

The Fuels and Lubricants Subcommittee will consider modifications to modify Item Block 3—MOS 21.1. and FLR–21.2 Labeling and Identification of Transmission Fluid, a proposal to modify the language to include a cautionary statement of package labels of obsolete transmission fluids.

Authority: 15 U.S.C. 272(b).

Alicia Chambers,

NIST Executive Secretariat.

Taking of Threatened or Endangered Marine Mammals Incidental to Commercial Fishing Operations; Issuance of Permits; Correction

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; correction.

SUMMARY: NMFS is correcting a notice that appeared in the **Federal Register** on May 6, 2021, that issues permits for a period of 3 years to authorize the incidental, but not intentional, take of specific Endangered Species Act (ESA)-listed marine mammal species or stocks under section 101(a)(5)(E) of the Marine Mammal Protection Act (MMPA), in certain U.S. commercial fisheries. There is an error in the description of the Category III fisheries that do not require section 101(a)(5)(E) authorization.

DATES: This notice is applicable May 20, 2021.

FOR FURTHER INFORMATION CONTACT: Suzie Teerlink, NMFS Alaska Region, (907) 586–7240, Suzie.Teerlink@noaa.gov; Diana Kramer, NMFS Pacific Islands Region, (808) 725–5167, Diana.Kramer@noaa.gov; Kara Shervanick, NMFS Southeast Region, (727) 824–5350, Kara.Shermanick@noaa.gov; or Caroline Good, NMFS Office of Protected Resources, (301) 427–8402, Caroline.Good@noaa.gov.

SUPPLEMENTARY INFORMATION: NMFS published a notice on May 6, 2021 (86 FR 24384) issuing permits to five fisheries to authorize the incidental take of ESA-listed marine mammal species or stocks under section 101(a)(5)(E) of the MMPA. The permits are effective for a 3-year period beginning May 6, 2021.

The notice incorrectly stated: “The HI shallow-set longline/Western Pacific pelagic longline (HI shallow-set component) changed classification from Category II to Category III in the 2021 LOF (86 FR 3028, January 14, 2021).” (86 FR 24384, 24386).

The Category II HI shallow-set longline fishery and the HI shallow-set component of the Western Pacific pelagic longline fisheries were not reclassified as Category III fisheries on the 2021 LOF (see 86 FR 3028, January 14, 2021). These two fisheries remain Category II fisheries on the LOF. As we stated in our **Federal Register** notice of the issuance of MMPA section

101(a)(5)(E) permits, we had previously determined that these fisheries meet the definition of a Category III with respect to ESA-listed stocks or species because they have a remote likelihood of or no known incidental mortality of serious injury of ESA-listed marine mammals, and therefore did not require permits. (86 FR 24384, 24386)

However, the Category II AK Bering Sea, Aleutian Islands Pacific cod longline fishery was reclassified as a Category III fishery on the 2021 LOF (86 FR 3028, January 14, 2021). As we stated in our **Federal Register** notice for issuance of the permits, we previously determined this fishery was considered a Category III commercial fishery with respect to ESA-listed stocks or species, so this change in classification does not change our determination.

NMFS is publishing this notice to correct these errors and state that the AK Bering Sea, Aleutian Islands Pacific cod longline fishery changed classification from Category II to Category III on the 2021 List of Fisheries (LOF) while the Category II HI shallow-set longline fishery and the HI shallow-set component of the Western Pacific pelagic longline fishery did not change classification (86 FR 3028, January 14, 2021). These fisheries were already considered Category III commercial fisheries with respect to ESA-listed stocks or species, so these corrections do not change our proposed determinations.

Dated: May 17, 2021.

Catherine Marzin,

Acting Director, Office of Protected Resources, National Marine Fisheries Service.
